## PREFACE.

API.  
.31  
R79

The early proposition for the celebration of the first century of American nationality was simply patriotic, but it took on no definite form. As the people grew familiar with the idea this vagueness drifted into the shape which it has since assumed. Its present form seemed the best, as it utilized the world's selfishness and made it give eclat to the occasion. We invited all peoples to exhibit their handiwork and products here among our millions of customers and consumers, and they accepted our proposition and did come, bringing with them their inventions and their works.

All inventions which have benefited mankind in all ages had their origin in man's longing for comforts. As the forests fell before the axe of civilization, the pick and shovel, aided by steam, upheaved the coal from its beds where nature had stored it away cycles of ages before; as wheat fields replaced the felled forests, the invention of steam-plows and agricultural implements to garner the fruits of the earth appeared; as man craved intercourse with his fellow the world around, correspondence became a necessity, and the lightnings were laid under contribution to unite them; and as civilization advanced, bringing in its train a taste for luxuries unknown in ruder days, the heavens, earth and seas were ransacked by the scientific and plodding to gratify it. The first great Exposition of the world's industry simply developed the extent to which man had advanced in economics a quarter of a century ago, and incited other nations to emulate the English in their adventure. The displays in other lands which followed rapidly, testified to the same desire for comforts and luxuries; and this, the latest Exposition, telling the same story in the Western Hemisphere, is a fitting memorial of the first century which has passed over these United States. In the various buildings dotting the Park at Fairmount may be seen the works of art and usefulness which sprang from the necessities of mankind, and taxed inventive genius and mechanical knowledge to contribute to their enjoyment. Necessity, like the great central engine, which the hand of our President sent wheeling on its course, moving the machinery through all the extent of that huge hall, has brought together the wise men of the world with their offerings of "gold and frankincense," to lay them before the new dispensation of "peace on earth, good will to men." Our mechanic, as he wanders through the corridors of the buildings, may learn to estimate properly his works, by comparing them with those of other lands. While it was most proper and will be profitable that the works of the world's busy artificers and artists should be here displayed, the initiatory steps for a fitting representation of the unity, extent and progress of the 'Press' were not taken until long after the inception of the idea of a suitable commemoration of our Nation's natal day. All agree that the Press is potential and useful, and it was believed to have kept pace with other industries, but none thought of specially exhibiting it in its entirety. Its scientific magazines supplied the mental pabulum which fed the genius of our inventors; its records of victories in mechanics and useful arts have inspired others to experiment and effort; its illustrated journals presented to every citizen at most moderate prices the models of buildings, tools, machinery, and whatever else was deemed desirable in this direction. It was elevating in this land the standard of taste and work, and building up as its reflex the schools which abound in our country. As an evidence of what we might have been without this instrumentality, it may be well to point to nations where the press has no existence. In Egypt there is not one paper printed in the Arabic language; some few there are in French and German, but not for the Egyptians, and the rudeness of the work of the general people testifies to the lack of popular instruction through the power of newspapers. Track the globe around, and those lands will be found most highly civilized and forward in catering to their people's comfort where the press is most plentiful, free and powerful. On the banks of a beautiful lake glistening between the Machinery Hall and the United States buildings stands a modest house, costing but little in money and small in extent, yet in it are gathered every newspaper and magazine published in this country.

There are eight thousand one hundred and twenty-nine newspapers published regularly in the United States. The combined issues of all the other nations of the earth do not equal

this number. An exhibition of a sample copy of each of all these thousands of periodicals would hardly convey an adequate idea of the importance of journalism in this country, yet it would do something towards that end; and believing that it would not be practical to attempt more, Messrs. Geo. P. Rowell & Co., in the early spring of 1875, addressed the Centennial Commission, making application for space in the main building, estimating that room would be required for fifty volumes of two thousand pages each. This was before the departments were thoroughly organized, and no response having been made to their formal application, the matter waited in abeyance until September, when it was again brought up by General Joseph R. Hawley, President of the Commission, and an exhibition was finally arranged, as set forth in the following correspondence:

GEO. P. ROWELL & Co., New York City, PHILADELPHIA, Sept. 17, 1875.  
*Gentlemen:*—Some time ago I made a memorandum that I must write you concerning an exhibit of the American newspaper, that wonderful feature in American civilization. It seems to me that an exhibit of its progress during the century and its present condition would be exceedingly interesting. Could every existing American periodical from semi-annual down to daily be shown? How and where? Have you any scheme in mind? Can you submit a plan? Can you come here and talk it over? Respectfully yours,  
 J. R. HAWLEY, President U. S. C. C.

GEO. P. ROWELL & Co., New York, PHILADELPHIA, Sept. 20, 1875.  
*Gentlemen:*—I have just read your note of the 18th. By all means develop the project. There ought to be a presentation of the periodical press of 1776 and 1876. \* \* \*  
 Do not forget this matter. Hastily yours, JOSEPH R. HAWLEY.

GEO. P. ROWELL, 41 Park Row, New York, PHILADELPHIA, Nov. 15, 1875.  
*Dear Sir:*—Did I answer your letter? I'm not sure. \* \* \* I shall be glad to see you, for your exhibition *ought to be made*. The American newspaper is a peculiar institution—a special feature of American political and general education.  
 Hastily yours, J. R. HAWLEY.

GEO. P. ROWELL, ESQ., PHILADELPHIA, Nov. 20, 1875.  
*Dear Sir:*—Your application for space in the International Exhibition for a display of sample copies of every periodical in the United States has been placed before me for consideration. It has been suggested that such an exhibition would be very much more attractive and interesting if an outside pavilion were provided for that purpose. \* \* \*  
 I most cordially commend this suggestion to you, with the hope that the newspaper interest of the country will join in providing such a pavilion, which would be a distinctive feature of the Exhibition. \* \* \*  
 Yours very respectfully, A. T. GOSHORN, Director-General.

GEO. P. ROWELL, ESQ., PHILADELPHIA, Jan. 12th, 1876.  
*Dear Sir:*—We have a number of applications similar. \* \* \* It is not my intention to grant any other privilege of this kind. Yours very respectfully,  
 A. T. GOSHORN, Director-General.

MR. GEO. P. ROWELL, FAIRMOUNT PARK, PHILADELPHIA, 1876.  
*Dear Sir:*—I have made a new design for your building, and will send the drawings to you in a few days. Yours respectfully, W. J. SCHWARZMANN, Architect.

MESSRS. GEO. P. ROWELL & Co., PHILADELPHIA, Jan. 15, 1876.  
*Gentlemen:*—\* \* \* I called Mr. Schwarzmann's attention to the subject of your letter yesterday, and he will transmit to-day or Monday the plans for your proposed building. I hope very soon to be advised definitely of your success in securing the Exhibition. Yours very respectfully,  
 A. T. GOSHORN, Director-General.

GEO. P. ROWELL, ESQ., FAIRMOUNT PARK, PHILADELPHIA, 1876.  
*Dear Sir:*—I sent you to-day by Adams' Express the drawings for your building. The general arrangement and construction remain the same. Yours respectfully, W. J. SCHWARZMANN.

GEO. P. ROWELL, ESQ., 41 Park Row, PHILADELPHIA, Jan. 29, 1876.  
*Dear Sir:*—I am right glad you are going ahead with your work. It will be as distinctive and interesting an American exhibit as we shall have on the grounds. \* \* \*  
 Yours truly, J. R. HAWLEY.

It was now decided to attempt a much more comprehensive display than had first been thought of. Instead of a sample copy of a paper, every publisher was to be allowed to exhibit a file for several weeks or months, and in place of being bound up in heavy volumes it was arranged that every paper should be made instantly accessible, and the exhibition thus serve the additional purpose of a monster reading room and an exchange for newspaper men.

About this time Messrs. Rowell & Co. received a communication from a well known printer (Peter C. Baker, Esq., of New York), who has devoted much time to the interests of the craft. He writes as follows :

"The pamphlet, job and ornamental printers will, I believe, very generally present the best specimens of their work ; and many of these beautiful productions of typographical skill will show what rapid advances the printer is making toward placing himself by the side of the artist and engraver.

"But what is the Newspaper and Periodical Press doing to show that in this department especially our country surpasses all other nations of the world ? I have not yet learned that any positive arrangements have been made to give tangible evidence of the immensity of the newspaper and periodical interests of our country, and therefore I very respectfully and earnestly suggest that immediate steps be taken to take this important matter in charge, and prepare a plan by which a copy of every newspaper and periodical published in the United States be collected and shown at the Centennial. No feature of the exhibition would be more effective than this to show the world the general intelligence of our people, and make plain the secret of the success of our republican experiment."

Other communications of a kindred tenor came from unexpected sources.

Being thus encouraged, plans were perfected and adopted. A prominent position was assigned the Newspaper Pavilion by Director-General Goshorn on Fountain Avenue.

The above engraving represents the exterior. The following description first appeared in the *New York Sun* of February 14th :

"The plan of exhibition is an alphabetical arrangement of partial files of each newspaper or periodical in such a manner as makes them instantly accessible, the space devoted to each bearing a label with the name of the publication printed thereon, and further designated by a number, by means of which a stranger, upon reference to his catalogue, is able at once to approach the section of the building where the particular journal which he desires to examine or refer to may be found.

"The cases containing these files form alcoves similar to those in public libraries for the arrangement of books, these alcoves forming long tiers, one on each side of the building, throughout its entire length, a portion of the space between being reserved for the accommodation of attendants, leaving a passage-way for the public eighteen feet in width, extending from one end of the structure to the other.

"The second story, approached by four flights of stairs, is devoted to reading rooms for the accommodation more especially of newspaper men, and supplied with conveniences for correspondents."

A better impression of the interior architecture may be obtained from the following writ-

ten after an examination of the plans by GAR, the accomplished (but decidedly critical) correspondent of the *New York Times*, in its issue of February 20th:

"The building is of timber and very neat. It has a length of sixty-seven feet, with a width of forty-six feet, and a total height of thirty-three feet. From the exterior it appears to be in two stories, but the centre of the building is only one story, and is a very fine chamber,

with ample light and space. The whole is arranged with that precision and mastery over details which have gained for Mr. Rowell his celebrity as a business man. The alcoves are fairly lighted by windows which occupy the entire space between them, so that there is no difficulty in obtaining the wished-for file if the directions furnished are followed. The height of the side chambers where these alcoves are placed is eight feet, and over them are the writing galleries, where numerous desks are placed. Nothing can be simpler or more efficacious than this system, which, undoubtedly, is the very best that could have been devised. The galleries are lighted by rows of windows corresponding to those in the alcoves below, and by the large transom windows at each end. In the facade this window is set back from the gable roof about five feet, and a very effective ornamentation of

radiating, incised planking is introduced, which relieves very pleasantly the simplicity of the structure. The interior is perfectly ventilated by a large lantern roof, and therefore the building deserves the praise of being thoroughly lighted, thoroughly ventilated, and of being admirably arranged for the desired purpose."

The cost of the structure, with its fittings and furniture, has not fallen short of ten thousand dollars, while the necessary attendants, books, blanks, together with the compilation and distribution of a large edition of a three hundred page catalogue, require another allowance of a similar amount. In the mere item of postage more than twelve hundred dollars was expended before the opening day of the exhibition. When it is remembered that no less than two hundred and fifty dollars' worth of stamps are required to communicate once with all the publishers, the rapidity with which these items count up is readily comprehended.

But with all these matters Messrs. Rowell & Co. had abundant experience. Furthermore, through intimate relations with the press of the country, extending over a period of more than ten years, they had always been seconded in a most generous manner. They were therefore fully convinced of two things: First, that their efforts would be appreciated by publishers to such an extent that the entire expense of the exhibition would be returned to them in the form of voluntary subscriptions. Second, that should this fail entirely, the exhibition would be worth its full cost as an advertisement of their own business, as conductors of the most complete newspaper advertising agency in the world.

In their application to publishers to send their papers and contribute towards the enterprise they made the following pledge:

'The Exhibition will be made precisely as set forth, even if there should not be a single subscription offered.'

Events have shown that their faith in the good-will and intelligent co-operation of publishers was not misplaced.

The proprietors of leading journals responded with such promptness and generosity that they may be said to have themselves assumed the cost of the exhibition.

An opportunity to contribute to the money expense was offered only to Representative Newspapers, and it is believed that among those of prominence which have neglected to respond not one has done so from an unfriendly feeling towards the enterprise, but mainly or solely from the pressing call for an economical management of expenditures which the stagnation of business for two years just past has made so loud in many establishments deemed prosperous.

Nothing but good-will has been evinced from the beginning. No disparaging word has appeared in any respectable journal, while favorable comments have filled the columns of the press from Maine to Oregon, from Florida to Texas.

One of the most pleasing features has been the handsome manner in which Messrs. Rowell & Co. have been encouraged by their brother advertising agents, as evinced by the following extracts from letters received:

Offices, 37 Park Row, N. Y.; 10 State St., Boston; 701 Chestnut St., Philadelphia, }  
February 22, 1876. }

We are pleased to learn that you have made arrangements to erect a building on the Centennial Exhibition grounds, in which to keep complete files of the newspapers of our country for the use of the public, and that you will also have good accommodations for editors, reporters, publishers, and others connected with the press. The enterprise could not be in better hands, and we hope and believe it will prove a great success.

Yours truly,

S. M. PETTENGILL & Co.

S. R. NILES' NEWSPAPER ADVERTISING AGENCY, BOSTON, Feb. 14, 1876.

Permit me to express my gratification that to you has been delegated the important task of making a complete exhibition of the newspapers and periodicals of the country at the forthcoming Centennial. From your extensive business connections and personal popularity with the press in all parts of the country, and your well-known experience and ability, no one, I am sure, could be selected who would manage it more satisfactorily. The whole newspaper fraternity are to be congratulated that this attractive and interesting exhibition is in such able hands. It will afford me pleasure to co-operate with you or assist you in any way in my power.

Very truly yours,

S. R. NILES.

S. H. PARVIN, PIONEER ADVERTISING AGENCY, }  
CINCINNATI, Feb. 14, 1876. }

I am more than gratified that such an exhibition is to be made. \* \* \*

Yours truly,

S. H. PARVIN,

BOSTON, Feb. 15, 1876.

\* \* \* \* I can but commend the enterprising spirit manifested in such an undertaking. Notwithstanding the immense number of the exhibitions of skill and enterprise, such a building as you propose and such an array of newspapers as you suggest, will attract a large number of visitors. \* \* \* No one, I think, can do this thing better.

Truly yours,

U. L. PETTENGILL.

C. A. COOK & Co's. NEWSPAPER ADVERTISING AGENCY, CHICAGO, Feb. 15, 1876.

\* \* \* \* We know of no agency—in the East—better calculated to conduct and insure success in such an enterprise. \* \* \*

Yours truly,

C. A. COOK.

T. C. EVANS' ADVERTISING AGENCY, 252 WASHINGTON ST., BOSTON, Feb. 11 1876.

I cannot refrain from expressing my gratification at the prospect of there being at the Centennial such an exhibition as you contemplate. It deserves to be, and I feel sure under your management it *cannot help being* a success. I should be glad if I could do anything to help you make it so. \* \* \*

Yours very truly,

T. C. EVANS.

CINCINNATI, Feb. 6, 1876.

In congratulating you on your appointment to the management of the newspaper department in connection with the Centennial Exposition, we express not only our own conviction, but we believe also that of the entire fraternity, when we say that the Commission have done well in selecting you for this responsible position. Your well known ability as a manager is a sure guarantee of a successful exhibition.

Yours truly,

E. N. FRESHMAN & BROS.

CHICAGO, Feb. 14, 1876.

Allow us to express our gratification that you have been selected to carry out the plan.

Yours truly,

CHANDLER, LORD & Co.

DODD'S NEWSPAPER ADVERTISING AGENCY, }  
265 WASHINGTON STREET, BOSTON, Feb. 14, 1876. }

I know of no one more competent to carry out the arrangement than yourself, and it assures me at once of its success. I will render, all aid possible.

Yours very truly,

HORACE DODD.

BATES & LOCKE'S NEWSPAPER ADVERTISING AGENCY, }  
NEW YORK, Feb. 28, 1876. }

Your proposed exhibition of American newspapers at the Centennial not only deserves to succeed but will certainly do so, because you are a good man to have it in charge, and because you will surely have the cordial co-operation and good wishes of all persons in any wise connected with the newspaper press.

Yours truly,

J. H. BATES.

That Philadelphia agents were the only ones not joining in these expressions is doubtless of greater apparent than real significance.

Americans are a nation of newspaper readers. There are papers for girls and boys, for teachers and taught, for trades, arts and sciences, for the lovers of the wonderful, the religious, the agriculturists, the metallurgists—in a word, the physician, as he rides to the expected birthplace of some young patient, and the undertaker, as he drives to the house of mourning, must each have his paper to while away his time. The opening exercises of the 10th of May were read by millions in every part of this land, and carried to distant countries by the press and the aid of the telegram it called to its use.

Good men are not afraid of criticism by the press. It makes statesmen and unmasks hypocrites; it incites to great deeds; it brings to every man's door the record of progress made in every department of learning and activity; it develops science, and whiles away the tedium of heavily hanging hours. It fits out exploring expeditions to discover new fields for civilization; it lays before its readers the doings of the world's busy multitudes, the fall of empires, the uprisings of nationalities, the record of the Storm-king's progress around the world, the decisions of the forum, the acts of governors and legislators; it tells the farmer what to plant and when; it develops the latest inventions; it weighs in the nice balance of purity of motive the deeds of the ruling powers; before it the unjust tremble, and on its pages, as on the walls of the ancient banquet hall, the wicked rulers may read, "weighed in the balance and found wanting"; it stirs the heart of benevolence to greater deeds of charity, it inspires the desponding, deters the plotters, and from the ruler to the humblest citizen, it throws its Minervian aegis around all alike. It is the voltaic pile, where is contained the vitalizing power of a universe. In this little Newspaper Pavilion, which may not be visited by all who go to the Centennial, are deposited the thousands of papers which mould American sentiment. At Virginia City one may go down the shaft of a mine which, in the dark and dismal rocks, is pouring out constantly a stream of molten silver to enrich man. Few will venture into those profound depths from curiosity alone, but the men at work keep right along turning out the precious metal for man's delectation and their own profit.

In these grounds is exhibited a nugget of silver said to weigh two tons, the product of one of these mines. Thousands of curious men and women are drawn about it, and look wonderingly and wistfully upon its huge form. It represents to man's cupidity just so much of life's happiness. But thieves may break through and steal such treasures. A short distance from this mass of metal stands the modest house where are clustered the fruits of ten thousand minds, printed so plainly that a wayfaring man, though a fool, need not err therein. Who thinks of the toiling thousands of earnest literary men and women, scattered over our states and territories, who waste midnight oil in preparing that mental food which, enduring when silver and gold have taken to them wings and departed never to return, proves to be a lasting comfort?

Newspapers are the synonym of goodness and virtue, however much some men may affect to despise them. It was a labor of almost infinite trouble to gather these papers from all quarters, but the work is a great success, and there is no worthier place to visit than the

NEWSPAPER PAVILION.

Extract from *NEW YORK TIMES*, June 14, 1875.

Ten years ago Messrs. Geo. P. Rowell & Co. established their Advertising Agency in New York City. Five years ago they absorbed the business conducted by Mr. John Hooper, who was the first to go into this kind of enterprise. Now they have the satisfaction of controlling the most extensive and complete advertising connection which has ever been secured, and one which would be hardly possible in any other country but this. They have succeeded in working down a complex business into so thoroughly a systematic method that no change in the newspaper system of America can escape notice, while the widest information upon all topics interesting to advertisers is placed readily at the disposal of the public.

## ALABAMA.

p., on Selma, Rome & Dalton Rd., 109 m. from Selma and 36 from Jacksonville. State Institution for the Deaf, Dumb and Blind is located in this city.

**ROCHESTER**, c. h., Monroe Co., 90,039† p., on Genesee r., 7 m. from Lake Ontario. The river has several falls within the city limits that furnish abundant power, which is very largely employed for manufacturing purposes. A number of flouring mills are located here. This is the centre of the nursery interest of New York State and is an agricultural market. The commerce is important, having communication with Lake Ontario through Genesee r., and with Buffalo and Albany by means of the Erie and Genesee Valley Canals, and the Central Rd. and its branches, several of which converge at this point. A branch of the Erie Road also connects with the main line at Corning.

# HISTORICAL AND STATISTICAL DATA.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

## NEWSPAPERS IN 1776.

The first American newspaper was printed in Boston, Sept. 25, 1690. It was issued by Richard Pierce and published by Benjamin Harris, and was intended to be published once a month, but was immediately suppressed by the authorities. The only copy known to be in existence is in the State Paper Office in London. The *Boston News Letter*, published by John Campbell, appeared April 24, 1704, being issued weekly until 1776. It was followed by the *Boston Gazette*, Dec. 21, 1719, and by the *American Mercurie*, issued by William Bradford, at Philadelphia, Dec. 22, 1719. On Aug. 17, 1701, James Franklin, elder brother of Benjamin Franklin, established at Boston the *New England Courant*. Oct. 16, 1725, William Bradford, the founder of the *Mercurie* at Philadelphia, began the publication of the *New York Gazette*, the first paper issued in that city. In 1728 Benjamin Franklin established in Philadelphia the *Pennsylvania Gazette*. In 1754 four newspapers were published in Boston, two in New York, and two in Philadelphia. The *Virginia Gazette* was then printed at Williamsburg, having been first issued in 1736 by William Parks, who had previously given to the public for nine years the *Maryland Gazette*, at Annapolis. In 1776 seven journals were published in Massachusetts, one in New Hampshire, two in Rhode Island, four in Connecticut, four in New York, nine in Pennsylvania, two each in Maryland, Virginia, and North Carolina, three in South Carolina, and one in Georgia; in all thirty-seven. All were weeklies, with the exception of the *Advertiser*, of Philadelphia, which was semi-weekly.

## NEWSPAPER STATISTICS IN 1876.

By the "American Newspaper Directory" for the current year, 1876, there appear to be now published in the United States and Territories, 738 daily, 70 tri-weekly, 121 semi-weekly, 6,235 weekly, 33 bi-weekly, 105 semi-monthly, 747 monthly, 13 bi-monthly, and 67 quarterly publications, making a total of 8,129 of all kinds.

Of the journals published in the country, the State of New York furnishes the largest number. Of all kinds, New York State prints 1,818; Pennsylvania follows with 738; Illinois is third; and then come in regular order Ohio, Iowa, Missouri and Indiana, all of which outstrip old Massachusetts, although she issues nearly 350. Only ten States print as many papers of all kinds as California, which ranks fourth in the number of its dailies. It seems to be peculiar to the new States at the West that they sustain daily papers. In many places the first newspaper established will be a daily, while in the old towns at the East such a thing was never heard of. Until within one or two years Florida has never had a daily paper.

At the present day it would seem that the United States print more newspapers than all the other nations of the world. Their growth has been rapid even in proportion to the increase of population. In 1776 we find we had thirty-seven papers and three millions of people. Now we have eight thousand papers and forty millions of people. These figures show that whilst one hundred years ago we printed one newspaper for every 30,000 souls, we now print one for every 5,000. This can be accounted for only on the hypothesis that the people are now more in the habit of reading than formerly. At the time Independence was declared probably no family took more than one paper, while now many take several.

## NEWSPAPERS DEFINED.

A newspaper is defined by Webster to be "a sheet of paper printed and distributed at short intervals for conveying intelligence of passing events." In compiling a "Newspaper Directory" it is necessary to exercise a good deal of care to be able to say what should be called a newspaper. The definition given by Webster cannot be taken as an accurate description of the present-day newspaper, for numbers do not contain any news, while many sheets which do, are not considered newspapers. All the amateur publications, for example, are excluded, though the number is quite large of those printing considerable news; and many sheets devoted especially to advertising the business of some man or firm are also omitted. On the other hand, books and magazines—everything published at regular periods not exceeding three months—are classed as newspapers.

There has been of late a large increase of what are called "class papers." It is being recognized that every interest must be supported by a paper. There are religious papers, agricultural papers, commercial papers; those of a financial, insurance, masonic, and temperance complexion, and so on through the whole list of interests and isms. The class papers in many cases are very successful. They seem to be in receipt of an excellent advertising patronage, and for the obvious reason that they are taken by people to whose interests or theories they are specially devoted, so that when one wishes to communicate with this particular class they are *par excellence* the channels. An advertisement in the *Scientific American* will reach many thousands of mechanics, while the same advertisement in an ordinary paper would be read by possibly the same number of or more people, but by fewer mechanics. So an advertisement in the *American Builder* might reach more carpenters than one in the *New York Times*, although the circulation of the latter would surpass that of the former many times.

## ADVERTISEMENTS THE LIFE-BLOOD OF NEWSPAPERS.

Among the newspapers which have been most successful in obtaining widespread circulations are certain story papers and Sabbath school journals, which do not contain news, and some of which are without advertisements. That some such journals can rely for profits upon their circulation for remuneration, does not render it less a fact that the advertisement is the life of newspapers. Daily papers are, in many instances, sold to newsboys at a price so low that it hardly pays the cost of the white paper on which they are printed. The editorial expenses, the setting of the types, the expensive presses, the magnificent incomes of the proprietors, are all the result of the advertising. Without the fast presses of to-day the editions of 50,000 copies could not be printed in two or three hours of a night as now, and but for the advertising patronage the papers could not be afforded at the low prices which make possible the immediate sale of such enormous numbers.

## NEWSPAPER INCREASE.

The number of new papers started during the past five years has averaged not fewer than six per day, but the actual increase has been only two thousand one hundred and seventy-nine. Suspensions and consolidations account for the balance.

Since May 1, 1875, thirteen hundred and sixty-six papers have commenced publication (an average of over four for each laboring day), and one thousand and ninety-seven have suspended. That the circulations are below what they were one year ago is also more than probable.

The States in which there has been an increase in number are: Arkansas, nine; California, twenty-eight; District of Columbia, eight; Georgia, five; Illinois, sixty-five; Indiana, eighteen; Iowa, twenty-two; Kansas, six; Kentucky, nine; Maine, one; Maryland, two; Massachusetts, ten; Michigan, eleven; Minnesota, two; Mississippi, five; Nebraska, seven; Nevada, two; New York, two; North Carolina, one; Ohio, thirty-one; Oregon, one; Pennsylvania, thirty-one; Texas, eighteen; Virginia, five; Wisconsin, eight; Territories, six; Dominion of Canada, twelve.

There has been a decrease in the following States: Alabama, six; Connecticut, two; Delaware, one; Florida, one; Louisiana, one; Missouri, twenty-three; New Hampshire, three; South Carolina, seven; Tennessee, five; Vermont, five; and in Newfoundland, two.

Exactly the same number as last year is issued in New Jersey—one hundred and seventy-seven—Rhode Island, twenty-seven, and West Virginia, seventy-five. Divided geographically, the gain in number is: New England States, one; Middle States, thirty-four; Western States, one hundred and forty-seven; Southern States, forty; Pacific States, thirty-one; Territories, six; Canada and Newfoundland, ten.

#### INFLUENCES WHICH EFFECT NEWSPAPER CIRCULATIONS.

It is interesting to consider what influences chiefly contribute to extend or limit the circulation of papers. One reason why those of New York State should have a larger circulation than their contemporaries in the West is that the Occidental States are largely peopled by emigrants from the Eastern, among whom there is a tendency to take a home paper. This swells the sale of Massachusetts and other New England papers. Another reason: New York is the metropolis of the country, the headquarters for all sorts of information; and the knowledge of this contributes to make people in every part of the country seek after the New York journals. It was notorious in the time of the war that the armies in the battle-field, officers and men, waited for the New York papers in order to get accounts of the battles they fought, as no others gave them so fully and accurately.

The leading morning papers of New York nearly all sell for four cents, but in the Western States five cents is the general price. Since, however, the hard times penny papers have come into fashion again, and it is quite a remarkable fact that most of the leading papers of the country were first brought into favor and notice as such.

The number of daily newspapers which stereotype their forms and use duplicate machinery is very limited, New York having as many as all the rest of the country combined.

The newspaper seems to be an institution specially calculated to advance in this country. Everybody reads it. Many men and women of more than ordinary intelligence read nothing else; and it would be wrong to assume that such do not educate themselves respectably, for he who studies thoroughly a well-conducted New York daily will not be badly informed on matters of importance. The necessities for newspapers seem to be endless. Politicians want them to advance their political interests; rings want them to influence the public mind; the public demands them to keep itself informed; religious denominations require their aid to propagate their distinctive tenets, and so on.

#### MODERN PRINTING PRESSES.

In the matter of printing presses there has been a great change in ideas in the past ten years. The Walter press, which has many points in its favor, is the only one used in the office of the *New York Times*. The *St. Louis Republican* also employs one of these machines. The Bullock press has superseded the Hoe in the *New York Herald, Sun*, and several other offices. Both these presses print from a continuous roll of paper. This feature alone implies a considerable saving in the working expenses of the press room. Another advantage they possess is their great compactness—a quality of much importance in large cities where room is scarce and expensive. The Bullock press is specially remarkable for this, and, other things being equal, bids fair, by virtue of its excellence in this regard, to advance to the very first rank. The Hoe press retains its position in most of the important offices outside the metropolitan cities, and is still used by the *New York Tribune*. Several manufacturers compete for the patronage in lower-priced machines. In the smaller weekly offices the old hand-press holds its own, and their sale is greater now than ever before, amounting to several hundred yearly.

#### WHAT KIND OF NEWSPAPERS THE PEOPLE WANT.

An impression prevails, particularly in country places, that the public want a large sheet of paper. The country newspaper publisher will almost always increase the size of his sheet if he can get advertising enough to pay the actual cost of the enlargement, and yet have no thought whatever of making a better paper. The notion that he is publisher of a large paper seems to gratify his pride. This idea that a big sheet is desirable would seem to be delusive, because we find, in going

over the successful papers of the country, that those which really pay the best are, as a rule, the small ones.

#### NAMES OF NEWSPAPERS.

The publications of all kinds described in the "American Newspaper Directory" for 1876 are represented by 7,626 titles. In many cases several editions are issued from the same establishment, under substantially the same name, and in the figures just stated such several editions are counted as but one. The *Journals* are the most numerous, there being 487. Next in favor stand the *Times*. These number 310. There are 302 *Heralds*. The *News* number 298. The total of the *Gazettes* is 276. The *Democrats* come next in point of numbers, 268. To offset the Democratic phalanx there are 211 *Republicans*. The *Advertisers* number 92, and are naturally most frequent in localities where the populace is the most enlightened and progressive. There are 122 *Advocates*. This name appears to be a favorite of the religious publications, and at least three-fifths of the total are borne by religious papers. There are 60 papers known as the *Aryus*, and with this quantity of professed eye-power, it is amazing that the frauds heretofore existing for years were not sooner discovered. There are 58 *Bulletins*, which are undoubtedly perused with care by the 51 *Citizens* described in the "Directory." Of *Chronicles* there are 89, while 143 *Couriers* stand in expectancy, ready to depart with 34 *Dispatches*. There are 89 *Enterprises*, most of them being located in the West. There are 45 *Expresses*, 34 *Farmers*, and 29 *Globes*. One of the latter is the *Flint Globe* of Michigan, and another the *Golden Globe* of Colorado Territory. Just 133 papers keep on the safe side by being *Independents*, though 49 *Leaders* are ready to direct them. There are 34 *Ledgers*, 47 *Observers*, and 16 *Pilots*. One of the latter is the *Storm Lake Pilot* of Iowa, and another the *Lone Rock Pilot* of Wisconsin. Each of these is remarkably co-incidental in respect to the name of the place and the name of the paper. There are 59 *Posts*, 122 *Registers*, and 95 *Reviews*. The country enjoys the guardianship of 144 *Sentinels*, one of which is the *Lone Tree Sentinel* of Iowa. There are 76 *Standards*, 84 *Stars*, 50 *Suns*, and 93 *Tribunes*. Among the unusual or striking titles are the *Bistoury* (Elmira, N. Y.), *Jimpicute* (Jefferson, Tex.), *Luxapiltian* (Fayette C. H., Ala.), the *Card Basket*—a society paper—of Washington, the *Hope Star of Hope* (Ark.), *Thistleton's Illustrated Jolly Giant* (San Francisco), *China Mail and Flying Dragon*, the *Elm Leaf* (East Hartford, Conn.), the *Eulenspiegel* (Owl's Mirror) of Chicago, *Jefferson Republican*, the *Southern Cross*—a Catholic paper—of Savannah, the *Egyptian Press* (Marion, Ill.), *Hoosier Patron and Lady Granger* (Indianapolis), *Hoosier State*, *Union Spy*—there is only one—*Condenser*, *Meschacebe*, *Wide Awake*—a literary paper—*Iron Horse* (Ishpeming, Mich.), *Morgan's Watch-tower* (Mt. Pleasant, Mich.), the *Ricochet* (Oxford, Miss.), *Blatter and Kladderatsch*, the *Schnedderdengg*, *Freedman's Monitor and Workingman's Looking Glass* (Phila.), the *I. C. B. U. Journal* (also in Phila.), the *Four Counties* of Richmond, Texas, the *Ventilator and Golden Rule* (Mannington, W. Va.), *Eurhetorian Argosy* (Sackville, Ont.), *Stylus*, *Lady Elgin* (Elgin, Ill.), *Over the Country*, *Pajaronian*, *Aurora Brazileira*, *Neighbor's Home Mail*, *Psyche*, *Madisonensis*, and the *Alpine Chronicle* of Silver Mountain, California. To these may be added the *Toledo Blade*, *Burlington Hawk Eye*, *Cape May Ocean Wave*, *Broad Axe of Freedom*, *Sentinel on the Border*, *Unterrified Democrat*, *Spirit Lake Beacon*, *Homer's Iliad*, *Horsehead's Journal*, *Painted Post Times*, *Roman Citizen*, and many others. Names popularly supposed to be frequent are in fact rare. It occasionally happens that the prominence attained by a single paper with a certain name brings the name so much before the people that it grows familiar to the public mind, though there may really be but few papers with the same designation. What the journalistic fancy of the Centennial year will devise in the way of newspaper titles is uncertain.

#### THE CO-OPERATIVE NEWSPAPERS—WHAT THEY ARE.

Within the past seven or eight years there has come up a class of newspapers known as co-operatives, or patent insides and outsides, by which it is understood that the publisher purchases at a central point a sufficient number of sheets for his issue with one side already printed. The persons with whom he contracts, having extensive offices, and wide arrangements with publishers through a great extent of country, are able to supply fifty or one hundred with the same matter, the geographical distribution of those papers being so distinct that the fact of the sides of two

papers being alike becomes of no consequence. They do not go to the same readers. The system has been scoffed at; but it has grown nevertheless. It is found that the man who has a "patent inside" can in many cases make a better paper and a cheaper than he who plumes himself upon doing the thing "all at home." There are about 2,000 sheets printed on this plan—more than a fourth of all the weeklies published.

#### THE VALUE OF ADVERTISING SPACE.

The value of advertising space in a newspaper is generally supposed to be fixed by its circulation, but although the principal, this is not the only element to be considered. Advertisements in papers having large circulations are said to be worth half a cent a line in dailies, and one cent a line in weeklies, for each thousand issued. In papers of smaller circulation publishers have to obtain a higher price for advertisements which go in but a few times. Advertisements are attracted to those journals which contain other announcements of the same class. A man who wants to let a house advertises it in the paper in which he sees most announcements of houses to let; and in time in every city there will be some one paper monopolizing that class of advertisements, and it is almost impossible for any rival ever to displace it or deprive it of this peculiar patronage. It will hold it even after having lost its circulation.

The impression prevails that English papers are much more favored with advertisements than the American ones. This is not the case. Our journals have more and get much higher prices for them. No other paper in the world has so many as the *New York Herald*, whose advertising rates are fifty per cent. higher than those of the *London Times*, and *Harper's Weekly* charges four times as much as the *Illustrated London News* for the same space. The truth is, the advertising rates of American papers are higher throughout than those of the English, and the patronage extended to them is more munificent.

The one-price system for advertising is the one which pays. Publishers are apt to devote too much attention to advertising. They think that this is all they have need to strive after, and they often depend upon it to pay every expense. Some have even gone so far as to publish a paper to be given away, trusting to the advertising to even cover the cost of the white paper; but as the paper would be a great item of outlay, the temptation to defraud is so great that it is not in human nature to withstand it. Knowing this, advertisers have come to regard papers of free circulation as dishonest enterprises, and there are now none of them in existence which are of any account. Advertising space is generally charged for by the "square"—a term which may have had meaning once, but has not any now. A "square" means a space—a large or a small space, according to the arbitrary rules of offices. Thus, a man who orders two "squares" may find he has negotiated for eight or for sixty-four lines. A "square" is about as definite as "a piece of chalk."

Agate is the type used in all the great daily papers for advertisements. Smaller type would not do, and larger is never employed. In some of the higher priced weeklies they are set in nonpareil; in a few of the lower priced still larger type appears, and in some of the Southern papers we find the paid announcements displayed in long primer. Whenever a paper uses a larger type than nonpareil for its advertisements, the experienced advertiser knows that space can be bought at a low price.

It is, doubtless, true that the best managers of newspapers treat their advertising space as merchandise. They know what it costs and what it ought to be worth, and unless they obtain the price they value it at, do not sell. Experience teaches that the man who gets a reduction to-day will not advertise to-morrow unless a similar or greater concession be made; whilst he who is refused to-day comes in to-morrow with increased respect for the man who had the backbone to see him leave the office the day before. Yet, after all, advertising space is not like merchandise. Merchandise, if not sold, remains in store and possesses value, whilst advertising space, if not disposed of, must be filled up with reading matter, and the compositor, too, must be paid for setting it. This fact acts as a lever in the hands of the shrewd advertiser, and is by him used with great effect. In most of the country weeklies an advertisement for three months will cost no more than twice the sum which would be demanded for one month; and if double the price for

three months be offered for a year's insertion, the chances are it will not be refused. Patent medicine men become very conversant with this condition of affairs.

Advertisements possess another value in addition to the money which they bring. The "wanted" advertisements, those of school-books, etc., etc., are much sought after, they being supposed to give character to the columns of a paper. Patent medicine advertisements, although considered less desirable, are, as a general thing, taken at lower rates than those of banks and insurance companies, because it is understood that a man who advertises patent medicines must make the advertising pay, and that he will watch and know the result. The other classes extend their advertising more as favors, and have less faith in its efficacy.

#### NEWSPAPER CIRCULATIONS.

Of the circulation of newspapers in this country as compared with that in others we know very little. This is the only country in the world wherein any statistics of newspaper circulation are published regularly. People's ideas about circulation are very crude. Newspapers have by no means such large constituencies as they are supposed to have. A town of 50,000 inhabitants rarely will buy as many as 2,000 copies of a daily paper published in its midst; and many a daily paper is published which prints less than 300 copies per diem. Sometimes papers rarely heard of in the town of their publication, and thought but of little consequence there, are those printing the largest number of copies. In New York city the *News* undoubtedly prints more than 100,000 copies a day, yet many residents of the city do not see a copy from one end of the year to another. The largest regular circulation ever obtained by any daily newspaper in the United States is now possessed by the *New York Sun*. Its daily issue is about 140,000 copies. The *London Daily Telegraph* is the only paper in Europe whose circulation exceeds that of the *New York Sun*. That is said to issue about 180,000 copies daily, while the *London Times*, believed by the public in general to be the leading paper of the world (and justly so), prints barely one-third that number. It is almost superfluous to add that the most influential dailies are not always those of largest circulation.

The *New York Ledger* and the *New York Weekly* undoubtedly print more than 100,000 copies every issue—possibly twice that number; a child's paper in Boston issues 127,000, and *Harper's Weekly* can claim nearly 100,000. With these exceptions there is every reason for believing that there are no weekly papers which exceed an issue of 90,000.

A premium system of getting subscribers has been very much in fashion for some years past, which has at times been very successful. Many papers have run up an enormous circulation by this means, people often buying them for the premium, and not caring for the paper. But circulations so obtained do not hold good, and after the expansion has once receded, it is exceedingly difficult to restore it.

The religious paper having the largest circulation in the United States is the *Christian Advocate*, published in New York; next to it, probably, the *New York Observer*.

It is a remarkable fact that some of the most profitable papers have very small circulations. They obtain a good name and valuable advertising patronage; their small issue enables them to get along with low-priced presses. Having plenty of time to run off an edition, they do not employ many men. With them there is no rush or confusion. Everything goes slowly, comfortably, is done cheaply, and managed with economy, and a large portion of the money which comes in remains as profit.

#### AMOUNT OF CAPITAL REQUIRED TO START A NEWSPAPER.

The amount of capital required to start a newspaper is an interesting subject. It varies from three hundred dollars up to a million. Many an one has been commenced on as little money as the smallest sum named, while probably a million would hardly suffice to bring out in New York at the present time a daily which should successfully compete with the great dailies already in existence.

The largest profits ever made from newspaper enterprise have come from daily papers. They also sink money the most rapidly when they fail to pay. Weekly papers stand next in the order of lucrativeness; but semi-weekly and tri-weekly papers are rarely profitable. There is no instance in all the Northern States of a semi or tri-weekly paper having come up to the value of \$15,000.

The sums of money sunk in establishing papers are often very heavy. On *Harper's Weekly* \$100,000 was expended before it commenced to pay; the New York *Times*' outlay reached several hundred thousand dollars before the investors began to see a return; *Hearth and Home* entailed on its various proprietors losses not far short of \$200,000 before it was finally suspended; and many a paper of which the public knows nothing has cost its owners sums ranging from \$30,000 to \$100,000. On the other hand, the profits, when success is met, are proportionately large. *Harper's Weekly* has undoubtedly paid as much as \$100,000 a year in profits; the New York *Ledger* much more. The Philadelphia *Ledger*, New York *Herald*, New York *Times*, and New York *Sun* have often paid much larger profits than those even. It is reported that the Chicago *Tribune* earned from its advertising columns the money required for its new building as it was needed to pay the contractors. Monthlies rarely make much money. They are generally published for the pleasure of the thing. No temperance newspaper was ever known to pay. The same may be said of masonic publications and of those devoted to the interest of any of the various secret societies.

To establish a new daily paper in any of the large cities is considered a positively certain way of sinking all the money that is put in. In ten years there has been no new daily in New York that has made money; and one that is losing is a perfect maelstrom for the wrecking of capital. Such investments we have heard compared (and aptly) to "pouring water down a rat hole." There is hardly ever any end to it. The paper, however, that is making money will go on doing so, notwithstanding great mismanagement. That which does not quite pay, and loses a little more this year than last, will never pay; but the one which has struggled for twenty years, and for the last five has come a little nearer to a paying basis each twelvemonth, will in a few years make a fortune for its owners.

The causes of failure in newspaper enterprises may almost invariably be traced to poor business management. The paper that fails, fails in a way and from causes which would be foreseen by any intelligent observer who from day to day had an opportunity of overseeing such matters.

The value of newspaper property in this country is very great. It is very intangible, however. Probably the New York *Herald*, if offered for sale, would realize about two million dollars. There are two or three establishments worth a million of dollars each; a couple of dozen worth half a million; a larger number equal to a hundred thousand dollars apiece; and there exist plenty of offices throughout the country publishing little papers, which a journeyman printer, going in with \$250, and giving his note for \$250 more, could induce the proprietor to resign in his favor. There are many newspapers conducted in the country the proprietors of which do not realize more than \$400 profit per annum as a recompense for their labor.

In the country, in small places, the job office is an important auxiliary. Many papers would be unable to exist without it, and in some the paper simply serves as a sort of a tender to the other department. It advertises and brings business to the printer. Next to the job office, the legal advertising is depended upon to furnish the sustenance of the newspaper. It is oftentimes the case that a man having a newspaper established in a frontier county (and consequently a sparsely-settled region) takes advantage of the absence of similar publications to publish a sheet at his own office, printing on it the name of the shiretown in a contiguous county. He then sends over one or two hundred copies and obtains subscribers there, and thus manages to get the legal advertising of the county. In this way the enterprise pays—perhaps not very handsomely, but it does pay.

The most successful newspapers are those conducted in two separate departments, having an editor and a publisher. The editor controls the columns of the paper. It is for him to say what course the paper shall take—what it shall say and what it shall not say; it is for the publisher to see that the bills are paid, to fix the prices for advertising, and to decide what shall be paid for of that which is published. These two positions need two very different descriptions of talent, and it is very rarely indeed that one man possesses both. It was well known that Mr. Greeley, the founder of the New York *Tribune*, was never a suitable man to have anything to do with the affairs of the counting-room. He, perhaps, knew this as well as anybody.

## NEWSPAPER CHARACTER AND INFLUENCE.

The business of publishing a newspaper, in the hands of a good man, is a very respectable one, but in the hands of a man of another sort it becomes quite the reverse.

The editor who always tells the truth—who says in his columns only what he believes—exercises a great influence, and sometimes he is himself surprised to find to what an extent his statements are received. The newspapers which never take any stand upon political questions—the so-called independent papers, that are Republican to-day and Democratic to-morrow—do not wield much power over the minds of their readers. Senator Wilson, of Massachusetts, our late Vice-President, very accurately described their position when, in conversation one day with a Western editor who prided himself upon the influence of his “independent” paper, he said: “Your independent papers have not any influence. Your readers have been so educated by you that they are just as independent as you are, and when you take any stand different from that which you have been taking, your readers cut loose from you.”

To make a good newspaper, to publish it, or to edit it, is said to require a peculiar training. Yet many successful newspaper men have never had any, and have gone into the business in middle life. They have, however, all been men who have shown themselves possessed of a peculiar tact which is not common by any means.

Editors are slow to learn that what interests them will not always interest their readers. If an editor has a personal grievance, he is greatly tempted to ventilate it in his paper, and in that way he reveals to his readers all about a rival or an enemy of whom they might otherwise never have heard. Thus he makes an antagonist of importance, who, if let alone, would have been of no consequence whatever.

## NEWSPAPER SALARIES.

Where there are no official announcements, to report upon people's salaries is necessarily somewhat hazardous. It is an interesting point, however, and one that cannot be overlooked in a sketch of this kind. The largest salaries paid to editors probably do not exceed \$15,000 a year, and this can only be secured on one or two of the leading New York journals. In cities outside of New York \$100 a week is good pay, and it is only in cities like Chicago that so much is to be obtained. Probably no editor in Boston, Philadelphia, or any Eastern city, except New York, receives as much as \$5,000 a year. Reporters and city editors, and all the minor positions on a paper are, as a rule, poorly paid—from \$12 to \$40 a week, according to the importance of the place. The business manager of a paper is frequently the best paid employe, and upon him the profits largely depend.

## TOO MUCH ORIGINAL MATTER NOT DESIRABLE IN NEWSPAPERS.

Papers which are made up entirely of original matter are not, as a rule, very popular. It is a very common remark of shrewd newspaper men that they can steal better articles than they can buy. When an article is bought and paid for, there is a feeling that the whole of it must be used, even though in some parts it lack interest. On the other hand, there is no feeling of compunction in slicing down, to meet the exigencies of space or the needs of readers, a good article seen in a neighboring paper. The good points are saved and verbiage rejected. It is also a fact that the public seem to have an objection to too much reading matter. Among the most prosperous papers are those which have very little of it in their columns. In proof of this take, for instance, the *Philadelphia Ledger* and the *New York News*. The public also have an antipathy to supplements. Hardly any man finds an extra sheet in his morning paper without a feeling of annoyance, or without wishing it were not there. Yet these supplements cost a great deal of money.

It may not be out of place here to correct an erroneous idea which quite extensively prevails. It is thought that the conductors of newspapers, especially of

those appearing diurnally, are very glad to have sensational reports—great trials, murders, scandals, and so forth. These cause the papers to be largely sold, and the public infer that the proprietors reap heavy profits from the increased circulation, whereas the fact is that the extra expense for telegraphic news, for reportorial labor, type setting, etc., vastly exceeds all the profit accruing from this source.

#### THE CIRCULATION AND DISTRIBUTION OF NEWSPAPERS.

In the list of dailies, in point of circulation the average of Maryland (11,336) stands at the head of the list, with Massachusetts (9,942) second, and New York (8,402) third. The large average of Maryland is due to the fact that six out of the eight dailies, whose circulations are given, are published in Baltimore and print from 8,278 to 20,094 copies each. Although the average circulation of the New York city dailies is 24,965, the large number of country dailies whose subscription lists fall below 1,000 each (23 per cent.), reduces the average for the whole State to a third place in the list. In Massachusetts 26 per cent. of the list exceeds 10,000 circulation, while in New York only 11 per cent. reaches that figure. The smallest daily average (734) is found in Mississippi, and the next (782) in Nebraska.

Among the weeklies the largest average (4,120) is found in New York, the next (3,777) in Massachusetts, and the next (3,375) in the District of Columbia. A comparison between the cities of New York and Boston shows an average weekly circulation of 12,124 in the former and of 10,702 in the latter. Nevada furnishes the smallest weekly average (400), and Florida (478) next. Among the total averages of all publications that of New York (4,991) ranks first, that of Massachusetts (4,582) second, and that of the District of Columbia (3,697) third, while Florida (470) is found at the foot of the list. Between the different classes of publications the monthlies take the lead, with an average circulation of 5,144, and the dailies next with 3,877. A further analysis shows that, while the daily average of a State is influenced to a marked degree by the large cities within its borders, that of the weeklies serve as an unfailing index of the prosperity and intelligence of the rural districts. In the Northern States the average is large, while in the Southern States and Territories it is small.

In a comparison of aggregates, New York heads the list with a daily circulation of 764,500 copies, or 244,640,000 copies per annum, of which number 599,161 copies are issued daily in New York city alone. The aggregate weekly circulation in the State is 2,459,503 copies, of which 1,782,163 copies are issued from the city offices, and the total aggregate amounts to 4,271,527 copies each issue, or 390,529,912 copies per annum. Of the total for each issue, New York city prints 3,340,300 copies, or over 78 per cent. of the aggregate circulation of the State. The next largest total aggregate for each issue is that of Pennsylvania (1,701,250), and the next Massachusetts (1,214,124). The total circulation of all the dailies in the United States amounts to 2,291,041 copies, or the weeklies 8,938,166 copies, and of all publications 13,940,304 copies each issue, or 1,250,024,590 copies per annum.

A comparison between the aggregate circulation of all publications in each State with its population (1870), shows that California issues 90 copies per annum for every individual on her census rolls, while New York and Massachusetts fall but little short of that number with an annual issue of 89 and 79 copies respectively. When the distance of California from the great newspaper centres of the East is considered, it will be seen that the local support which her publications receive is far better than a comparison with the averages of those States in near proximity to New York, Boston, or Philadelphia would indicate. At the other extreme we find Florida and Arkansas, the former issuing 3 and the latter 4 copies per annum to each person. Of the 42 separate States and Territories, 9 issue less than 10 copies, 23 less than 25 copies, and 34 less than 50 copies per annum to each person, while in the whole of them combined the average number issued is 32. It will be interesting to note that a high average is always found in those States where a high standard of education and good order exists—a fact of no slight significance in estimating the influence of newspapers upon the government and education of the people. The table shows that one periodical of some kind is printed for every three persons. With five persons to each family this will prove one of two things, either that there

is more than one paper regularly printed and sold for every family, or that the circulations as given are too high.

In the Territories the average area for each publication is 7,443 square miles, in Nevada 4,339 square miles, while in the District of Columbia the minimum is reached with barely 2 square miles. In the New England States the average area ranges from 23 square miles in Massachusetts to 442 in Maine, in the Middle States from 43 in New York to 88 in Delaware, in the Western States from 70 in Ohio to 4,339 in Nevada, in the Southern States from 95 in Maryland to 1,976 in Florida.

# THE CONNECTICUT COURANT.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The COURANT, of Hartford, is the oldest, most successful, most widely-known journal that is published in Connecticut; nor has any in New England a more thoroughly national reputation. The first regular number of its weekly edition—the CONNECTICUT COURANT—was issued November 19, 1764, by Thomas Green, who set up the first printing press in Hartford, in order to print this paper. Since then it has been continuously published in the same city and under the same title, and no other newspaper in the United States has for so long a time had a similarly uninterrupted existence. It is, therefore, speaking strictly, *the oldest newspaper in America!*

It appeared in time to give early utterance to the complaints that, first by suggestion, then by plain statement, and later by most emphatic expression, gave unheeded warning of the coming revolution of a century ago. All through that trying period, save one brief interval when, delayed by lack of paper—the proprietors stopped publication long enough to build themselves a paper mill—the COURANT regularly appeared every week. And on through the settlement of the war, and the discordant times that followed, and on through three more wars through all our periods of national prosperity and adversity, the COURANT has unfailingly gone out to its thousands of readers prepared under the promise of its projector, to take "great care from Time to Time to collect all domestic Occurrences that are worthy the Notice of the Publick."

The whole history of the United States, written contemporaneously with the events, is spread out on record on its pages, while its advertising columns, and its home news are, from year to year, illustrative of the domestic and social life of the people and of its various changes.

The first COURANT was of four pages, with two columns to each page. The COURANT of to-day, still a four-paged journal, has nine columns to the page, and is more than eight times as large as was the first issue; while now all the issues of the COURANT, daily and weekly, give their readers nearly sixty times as much to look over in one week as was given in a week by the COURANT a century ago.

The HARTFORD DAILY COURANT was first printed in 1836, and is now the only morning newspaper in the city. The paper, owing, perhaps, in part to its long service and its being so firmly established in the households of all those older families of the State, with whom it has come to be an indispensable institution, has a wide popularity. From early days it has received frequent contributions from prominent citizens; Hartford people regarding it as the Englishmen are said to regard their London *Times*—as the place to appear in in print whenever they have anything to say. It would be hard to name any of the public characters of the city for a hundred years back who have not, participating in some discussion, or through some particular independent essay of their own, put their contributions in the "People's Column" of the COURANT. It has become a part and fixture of the city of Hartford and of the State of Connecticut. Its circulation is large through Connecticut, and its influence under judicious management has become very great. Outside of the State, the weekly, more especially than the daily, is taken by subscribers all over the country and by many New England people abroad.

The paper has changed proprietors ten times since 1764, either by total sale or by change of partnership, and since January 1, 1867, has been published by Hawley, Goodrich & Co. Gen. Joseph R. Hawley, the President of the Centennial Commission, is at the head of the firm, and when at home is the editor-in-chief. Mr. Charles Dudley Warner is associated with him, both in the partnership and as editor, and "My Summer in a Garden," Mr. Warner's first thoroughly successful literary production, was first printed in a series of contributions to this paper. Mr. Stephen A. Hubbard, formerly of the Winsted (Ct.) *Herald*, is the third associate partner and

editor, and the manager. The business department is in charge of Mr. W. H. Goodrich, whose name appears in the firm, and who has been connected with the paper for many years.

All the regular facilities of the modern newspaper for collecting news "worthy the Notice of the Publick" are employed by the COURANT, and it has also its special correspondents in various parts, both of this country and Europe. Every effort is made to have it truly a newspaper. Conscious of its influence and jealously careful of its reputation for honesty and accuracy, the managers of the COURANT maintain for it a high moral tone and avoid that which is sensational and untrustworthy. By this wise conservatism they increase the respect for the paper and the weight attached to its expressions of opinions, which are positively and fearlessly outspoken in favor of what it believes to be right.

Relatively to its size Hartford is to-day the richest city in the United States. It has developed thus through a series of wisely-planned public measures and through the energy and private enterprise of its citizens. The COURANT has been found always ready to advocate that public policy which looked to the city's ultimate welfare, and it has always had a word of encouragement for those citizens who have made themselves active in opening new and promising paths of industry. It has seen the insurance business of Hartford grow from its very beginnings to the accumulation of the hundreds of millions of dollars of assets that the Hartford companies now have; it has watched the banks of Hartford from the founding of the first grow to be the richest in the State; and it has welcomed and assisted one after another the great manufactories that have so contributed to make Hartford famous. In a word, it has, from the first, identified itself with the best interests of the place, and as Hartford has prospered and grown, the COURANT has prospered and grown with it, and may to-day be taken as the exponent of New England intelligence, New England enterprise, New England honesty, and New England success, which is the product of these.

# THE "PUBLIC LEDGER," PHILADELPHIA.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The Philadelphia PUBLIC LEDGER is among the journals which have chiefly contributed to establish the reputation of the American press. In point of enterprise as well as of originality of business procedure, the manager and proprietor of the LEDGER is not surpassed by those holding similar relations to any of our other great papers, and in no instance has the exercise of those qualities secured for their owners such widespread celebrity as is apparent in the case of GEO. W. CHILDS. It is not alone in the Western Hemisphere that this distinguished journalist's fame is a topic discussed far and wide; it is almost equally established and canvassed in European countries—France, Germany, England—where his achievements are held up as exemplars of American enterprise, power of surmounting colossal obstacles, and justice in rewarding merit. Biographies of him have been published in leading organs of those countries, the interest of the narratives being such that thousands of readers have perused them with avidity, and so widely discussed the matter of them that most Europeans who study our public men are acquainted intimately with the history of the popular proprietor of the PUBLIC LEDGER, of Philadelphia.

GEORGE W. CHILDS commenced life in a humble way, and has risen to wealth and eminence, and the same may be said of the PUBLIC LEDGER itself, which first appeared as a small four-page, one-cent sheet on the 25th of March, 1836. The talent employed on it was, however, of a high order, and quickly secured it favorable notice and hearty support. The first year of the LEDGER's existence proved so propitious that larger accommodation was needed, and the paper was increased in size. Success continued to be proportionate to the enterprise displayed, and (as usual where profits are quickly realized) rivalry was induced. Other penny daily papers were started in opposition, but failed to loosen the firm hold on the people's regard which had been conceded the LEDGER as a reward of ability, consistency, and a progressive spirit. During and subsequent to the Abolition Riots of 1838 the LEDGER became famous as an uncompromising advocate of "free speech" as to slave labor, and notwithstanding that many of its readers were for a time alienated, and that the dangers of extreme measures at the hands of an excited mob were ominous, the LEDGER bravely held on its philanthropic course, and lived to see and now survives the abolition of what was so long our rebuke in the eyes of other nations. The first rotary press ever built was used to print the LEDGER, April 9, 1847. This was a four-cylinder press, invented by Richard M. Hoe. The proposition to place type on a cylinder and whirl it around was scouted as an absurdity by nearly all printers; but Mr. Swain, one of the then proprietors, had intelligent faith in Colonel Hoe's theory, and the machine proved, as is well known, a satisfactory success.

The great increase in the price of white paper and labor during the war rendered the publication of a one-cent journal impossible at a profit, and after having lost considerable money in their endeavors to supply it at the old rates, Messrs. Swain & Abell determined to sell out the entire establishment. This they did December 3, 1864, and the following Monday Mr. GEORGE W. CHILDS began his brilliant career as the publisher of the PUBLIC LEDGER, and received a warm welcome from the leading journals of the country, to which he was already known as the publisher of many valuable books. Not being disposed to follow up the course of his predecessors, by publishing the paper at a loss, Mr. Childs, on the 10th of December, 1864, increased the subscription price to twelve cents per week, but this was reduced a month later to ten cents—now twelve cents. The rates of advertising were also advanced. These mutations

caused many to predict a disastrous decrease of support; but though there was an immediate declension, it proved only temporary, the excellency of the paper being such that few who had once been in the habit of regularly perusing it could long abstain from according it patronage, and the circulation speedily recovered and steadily increased, until in the first three months of 1876 it reached 7,221,500 copies—a daily average of 92,584.

"LEDGER" BUILDING.

The building in which the LEDGER is produced is among the grandest structural embellishments of the Quaker City, and as a newspaper office is complete in every particular. It is freely open at all times to citizens and strangers; and it is estimated that not less than one hundred thousand persons have availed themselves of the privilege of scrutinizing the establishment. Nothing that judicious liberality could secure has been left undone to provide for the comfort of all engaged in the production and issue of the paper.

The great influence exerted by the PUBLIC LEDGER is largely attributable to the care that has for many years been exercised to prevent the appearance of extravagant statements in its columns. The imperative rule is to understate rather than to overstate. Throughout its long career the LEDGER has advocated every improvement which has tended to increase the prosperity of Philadelphia and the welfare of its citizens, often in the face of strong hostility; and the wisdom of its pleadings has been demonstrated by the benefits which have accrued when its advice has been followed. The LEDGER may be said, among other things, to have created a class of advertisements which contributes largely to a newspaper's revenue. "Wants," "Boarding," "For Sale," "To Let," &c., had no existence as they now appear when the LEDGER started, but have grown with it.

Mr. GEORGE W. CHILDS has enlarged the usefulness and widely extended the influence of the PUBLIC LEDGER. His sagacity and tact enabled him to pilot his paper through a perilous passage in its course, and to make changes in its management which, in less skillful hands, might have proved disastrous. He has proved his capacity and fitness to control a great journal, which is at once an exponent and moulder of public opinion, and a power in the land. Colleagueed with his rare intellectual qualities is a goodness of heart which con-

stantly manifests itself in acts of considerate benevolence, and added to these is a magnetism of manner that draws and attaches to him multitudes of friends. "As a true journalist," said the Hon. John T. Hoffman, ex-Governor of New York, "he appreciates and understands the difference between the liberty of the press and the license of the press. He deals boldly with public matters and with public men in connection with them—but he is always careful to recollect that private character is private property, owned by that most sacred of all circles, the family circle, and that the man who needlessly assails it is as much a criminal as if he robbed the household of its dearest treasures, or plucked from it, for his own base uses, its fairest flower. He understands, what I wish all editors in America understood, not only the power of the press, but its proper uses and its great mission; and by his daily conduct and life declares his opinion that the man who owns a printing press and can use a pen has no more right to indite libels and stamp private reputation than the owner of a uniform and a sword has to cut and kill to please his fancies or to gratify his malice."

## THE BOSTON JOURNAL.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The Boston JOURNAL is one of the best known newspapers published in New England, having been established in 1833. It occupies its own building at 264 Washington street, and is printed on an eight-cylinder and a six-cylinder Hoe press. It publishes two papers daily, Boston MORNING JOURNAL and Boston EVENING JOURNAL. The sworn statement of its publisher, subject to verification at any time by advertisers, shows an average daily circulation of 31,500 for the months of January, February, March, April, and May, 1876. The circulation for the last week prior to this writing is as follows:

1876.	
May 8 .....	31,514
May 9 .....	30,889
May 10.....	31,816
May 11.....	31,225
May 12.....	30,980
May 13.....	33,854
Average.....	31,713

The JOURNAL publishes weekly and semi-weekly editions. The weekly has a larger circulation in New England than any paper of like character emanating from a daily newspaper office in Boston. The official postage returns show that the Boston JOURNAL ranks the *sixth* paper in the United States in the amount of matter sent through the mails. The JOURNAL is published by the Journal Newspaper Co., Boston, Mass., and its managers are Messrs. S. N. Stockwell and Wm. W. Clapp. It is a political, commercial and literary newspaper. Its enterprise is best indicated by a few items of its expenses for the year ending April 1, 1876. Telegraphic expenses, \$33,302.70; Editorial and News Department, \$39,447.24; correspondence, \$13,404.68; postage paid, \$4,285.

# THE SPIRIT OF THE TIMES, NEW YORK.

THE LEADING SPORTING JOURNAL OF AMERICA.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

This great weekly newspaper is as well known throughout this country as the New York *Herald* or *Harper's Magazine*. It was founded in 1831, in compliance with a general demand for a journal which should reflect the tastes of the vast number who find pleasure in the sports of the turf, the field, the water, and other pastimes, sprang at once into popular favor, and has never since its foundation failed to hold its position as the recognized authority and acknowledged organ in the matters to which its broad columns are specially devoted. Its original editor was William T. Porter, *clarum et venerabile nomen*, who continued in its sole charge until 1856, in which year George Wilkes became associated with him. Mr. Porter died in 1859, and since then Mr. Wilkes has most ably edited the paper, being also its proprietor, until November 1, 1875, when E. A. Buck became equally interested in its ownership, and assumed editorial control. Great as had been its previous popularity, its rapidly-increasing circulation under the new management shows that it still holds first place in the esteem of the public. Labor and expense are lavished upon it as they have never been before, and the reading community is always quick to appreciate generosity in its behalf.

The SPIRIT OF THE TIMES has always been noted for its manly and independent manner of dealing with all sporting questions and events. Being thoroughly informed, it knows the right and dares to pursue it. Fraudulent practices find in it not an apologizer, but an armed and relentless foe. The true sportsman is the last to compromise or palter with rascality; and this paper has well earned the right to be considered the palladium of the interests of the true sportsman.

The sphere of the SPIRIT OF THE TIMES is very extensive. It has sympathetically expanded with the expanding wants and tastes of those to whom it is the special organ, until it now issues a weekly edition of twenty-eight closely-printed pages, which number it frequently increases to thirty-two, and on occasions to thirty-six. Each number contains more printed matter than any magazine or other periodical published in the United States. Its patrons may depend upon it that everything of value relating to outdoor or indoor sports will find its way into the broad columns of the SPIRIT.

Its several departments receive the especial attention of gentlemen fully competent to maintain them at the highest standard. As the organ of the turf, it gives most complete and accurate summaries of all events, besides graphic reports of the more important meetings. In this department it has no rival. Its dramatic and musical columns, to which matters several pages are devoted weekly, are made up of brilliant and incisive *critiques*, correspondence from every large town in this country and from many foreign cities, and the latest intelligence of the movements of stars. In this department it is admitted to be *facile princeps*, both at home and abroad. The rising interest in aquatic sports and rifle-practice has caused a full page to be set apart for each of these specialties, edited by experts in their respective lines, who will keep fully abreast of the times. One of the most remarkable features of this journal is its "Answers to Correspondents." Questions upon every imaginable subject from all parts of the country are showered in upon it for decision, and receive the most careful attention and prompt and correct answers. It is the authority for the decision of wagers throughout the United States. The veterinary department is conducted by a fully-educated surgeon, who deals conscientiously with every case submitted. Letters are continually received announcing the beneficial results of these prescriptions, which are afforded *gratis* to all who take the paper

regularly. Besides these departments, billiards, athletics, chess, etc., are given due attention. Editorially, the *SPIRIT OF THE TIMES* is the organ of no person, clique or party, but deals fearlessly with all questions of the day. Its contributed articles have a world-wide fame.

What has been said in a simple statement of facts, and combined with the circumstances that the circulation of the paper is enormous, that it is read by the wealthy and money-spending classes as well as by the vast army of "middle men" who are the strength of the country, that it goes to every club in the land, and that the majority of its subscribers preserve its issues in permanent form for future reference, it will be seen, without argument, how invaluable it is as an advertising medium. The publishers are constantly in receipt of letters saying, "My advertisement in the *SPIRIT* has brought me more applications than those in all the other papers."

The subscription price is \$5 per annum, in advance, for which the paper will be sent, postage paid, to any address. All communications should be sent to E. A. Buck, No. 3 Park Row, New York City.

---

## THE AVALANCHE, MEMPHIS, TENN.

---

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

---

In the front rank of the most influential and valuable newspapers of the West and South, is the *AVALANCHE*, of Memphis, Tenn. This powerful and widely-known journal, since its establishment in 1857, has gradually acquired a position of which no competitor can easily deprive it. Under the long-continued judicious and enterprising management of its present publishers, Messrs. A. J. Kellar and R. A. Thompson—the latter of whom associated with Mr. Kellar at a comparatively recent date—the influence of the *AVALANCHE* has signally augmented in those wide sections where the paper was already so favorably known, and its reputation has experienced a merited extension in still broader regions. Its publishers have proved that they understand fully what the public expects of a first-class newspaper, and they have also attested their ability to produce and maintain a paper amply commensurate with those expectations of the public. The *AVALANCHE* is manifestly the leading independent and conservative newspaper of the Southern States. It is issued daily and weekly, and is thickly circulated throughout Tennessee, Arkansas, Mississippi, Alabama, Kentucky, Missouri, Western Texas, etc. The yearly subscription price of the daily is ten dollars, that of the weekly two dollars, and special rates for both or either are allowed to clubs. It is devoted to news, politics, commerce, agriculture, industries, literature, science, and the development of Southern interests, both material and social. To use its own words, it believes in the Constitution as it is, in the perpetuity of the Union of the States, and that the virtue and intelligence of the American people are equal to all the duties of self-government. It does not propose to ally itself with any political party except in so far as that alliance may accomplish good results. It does not look to nor care for the personal or political advancement of individuals, unless they represent vital principles whose enforcement is desirable; and its relations to all existing parties are such that it can afford to be fair in its dealings with them—to commend that in them which is good, and to condemn that which is hurtful.

1842. AMERICAN AGRICULTURIST. 1876.

AND DER

1858. AMERIKANISCHER AGRICULTURIST. 1876.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

These important journals well deserve a prominent place in a "description of the great newspapers of the day," and of the age, on account of their high character, great influence, and their immense circulation. The first named has run as high as *one hundred and fifty thousand* (150,000), regular edition, and has averaged fully one Hundred Thousand since 1862. For many years its circulation has far exceeded the combined editions of at least half a dozen of the largest of its cotemporaries of similar character and until the recent large multiplication of "agricultural papers," the AMERICAN AGRICULTURIST probably equaled or exceeded the combined circulation of *all* the other agricultural and horticultural papers in America. Its circulation and influence extend not only all over the United States and British America, but it is very largely taken in Australia, in the various English settle-

ments on the African coast, and indeed almost everywhere in the world where the English language is spoken; while the German edition finds many readers all through Central Europe, Russia, etc.

The above facts do not favor the general opinion that farmers, as a class, "are more given to hard work than to reading about it." It is to be noted that among economical cultivators a wide system of "lending" and "exchanging" papers prevails. Statistics gathered by the publishers show, for example, that in a single neighborhood there were 107 families, comprising 506 persons, young and old, who regularly read the twenty-three copies of the AMERICAN AGRICULTURIST taken at that post-office—an average of TWENTY-TWO READERS TO EACH COPY. From the facts gathered, and the above ratio, it is probable that nearly, or quite, Two Million (2,000,000) persons read this journal.

The AMERICAN AGRICULTURIST is one of the highest authorities on horticulture and kindred subjects. The managing editor, Dr. George Thurber, ranks with Prof. Asa Gray and men of like character and pursuits at home and abroad. While well versed in all matters connected with this journal, he is everywhere recognized as one of the foremost in a knowledge of botany, horticulture, etc. It would be a novelty to find in the AMERICAN AGRICULTURIST an erroneous recommendation, or item, in botany, horticulture, or, indeed, on any other subject.

It is to be noted, however, that the AMERICAN AGRICULTURIST, though taking

this name at first and adhering to it, is not exclusively, by any means, an agricultural or horticultural journal. Its motto is: "For the Farm, Garden and Household." Its FORTY-FOUR large pages, contain much "plain, practical and reliable" information on all subjects that pertain to the labor and physical well-being of the people, whether they live in City, Village or Country. It is largely taken by professional men, by merchants by mechanics, by operatives in manufactories, who cultivate their little garden plots—indeed, by all classes. (For example, its circulation in Massachusetts alone sometimes runs as high as 17,000 copies.)

A special feature of the AMERICAN AGRICULTURIST for a quarter of a century has been its unsparing and persistent exposure of quackery and the swindlers that prey upon the pockets, the health and the lives of honest people, who, without dishonest purposes themselves, are least likely to be suspicious of the statements and assurances of others. By this course this journal has saved to its readers and to the country many millions of dollars that would otherwise have gone into the pockets of harpies. In connection with the above may be mentioned: The Advertising rules of the AMERICAN AGRICULTURIST, which are perhaps more strict and more closely lived up to "at all times and in all seasons," than in any other periodical. Those in charge of this Department are under positive directions to rigidly scan every advertisement and every advertiser; to admit nothing deceptive in substance or form; to exclude all quack and other medical advertisements, all secret things, all persons suspected of dishonesty—in short, "every person offering an advertisement, who is not known personally or by good and well-established repute, is required to furnish satisfactory references or other evidence that he has both the ABILITY and the INTENTION to do for his patrons just what his advertisements promise."

The above rules, adopted at first from conscientious motives, have, unexpectedly to the publishers, proved a financial success, and furnished an example well-worthy of imitation by other publishers. The readers of this journal, knowing the strict rules of the publishers, read the advertisements and respond to them with confidence. The good advertisers receive such large custom through this particular journal, that they find it to their interest to give it special attention in sending out their business notices—no matter what rules or requirements the paper may be compelled to adopt to keep its advertisements within desirable limits. Thus it has come to pass that, while the subscription rates of the AMERICAN AGRICULTURIST have been, and are, kept down to or below the cost of making and supplying the paper, its business columns have made this periodical a notable financial success, unequaled and even unapproached by any other similar journal in the world.

It begins the New Century in the highest vigor and influence, and 1976 will doubtless find it among the flourishing institutions of that day. To avoid any interruption of its business or its arrangements by the age or the decease of any of the business partners, or other causes, the Management was in 1873 changed to that of a Chartered Company, taking the name of the leading editor and publisher for many years, and it is now, therefore, published by the ORANGE JUDD COMPANY, at 245 Broadway, New York.

History.—The AMERICAN AGRICULTURIST was originated in April, 1842, by the venerable A. B. Allen, who still lives in retirement at Toms River, N. J. He employed others to assist in publishing and editing, having a different business growing on his hands. In May, 1853, he called to the editorial chair Mr. Orange Judd, who, brought up as a farmer at the West, had at mature age sought the advantage of a collegiate education, and after some years of subsequent investigation, had devoted three years (1850—1853) to the careful study of agricultural chemistry, and agricultural science generally, with Profs. Silliman, Norton, etc., in Yale College. After a short service as editor, Mr. Judd became sole proprietor, and continued thus until the magnitude of the business required him to call in business associates, including among others, Samuel Burnham, Esq., who has now been a "right hand man" for about ten years; C. C. North, Esq., the present treasurer, who came in in 1873. In 1850 Mr. Judd called to his editorial aid Dr. George Thurber, above alluded to, who has since given untiring attention to this journal, and also is now chiefly entrusted with the editorial

management. Among its editorial and contributing corps may be named Henry Stewart, Col. Geo. E. Waring, Jr., Timothy Bunker, Esq., Col. Mason C. Weld, A. B. Allen, Peter Henderson, Prof. Asa Gray, Prof. W. O. Atwater, L. C. Root, Hon. Frederic Munch, "Aunt Sue," Faith Rochester, and others.

The German edition (*der Amerikanischer Agriculturist*) was started in 1858, and has been the only German agricultural and horticultural paper in this country that has had a continuous existence for a period of eighteen years.

---

## THE CHURCHMAN, NEW YORK.

---

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

---

THE CHURCHMAN was established about one-third of a century ago, and its existence was continued under different names until the end of the year 1866, with indifferent pecuniary success, notwithstanding its editorial management was at various points of its history in the hands of very able men. In 1866 it was called the *Connecticut Churchman*, and its actual circulation was hardly 1,500.

In December of that year it was purchased by the present proprietors, and from that time on it has enjoyed uniform prosperity, its circulation rising rapidly from 1,500 up to 17,500, and this notwithstanding its subscription price is larger than that of any other religious journal in the United States.

This growth is due to the determined perseverance of the managers in their endeavor to make THE CHURCHMAN a religious paper which should exhibit, in all the matters pertaining to its specialty, the enterprise and the literary excellence of the best secular journals.

It occupies confessedly the first rank among religious and literary weeklies.

At the beginning of the year 1875 it made a great advance in meeting the need of the time. In effect a weekly journal of high character is a magazine, made up of matter which merits to be preserved as much as any of the best monthlies or quarterlies. Therefore its form should be adapted to this. Recognizing the principle, the managers of THE CHURCHMAN adopted its present shape and size. It contains thirty-two pages, nine by thirteen inches in size, and is sent to subscribers most conveniently pasted and folded. The folding, the pasting and the cutting are done by one process, on a machine built expressly for THE CHURCHMAN.

THE CHURCHMAN is the most reliable exponent of the attitude and the principles of the Protestant Episcopal Church.

It represents adequately the entire Church, and is not an organ for the dissemination of merely party principles, or the opinions of one man or one clique. It gives week by week with remarkable promptness all Church news, and treats ably the civil topics of the day, as viewed from a churchman's standpoint.

In brief, THE CHURCHMAN is a weekly magazine of ecclesiastical intelligence and devotional and general reading, and is the largest and most widely-circulated weekly in the Protestant Episcopal Church. It contains each year one-half more reading matter than "Harper's Magazine," more than twice as much as the "Galaxy" or "Scribner's," and three and a half times as much as the "Atlantic."

# THE BOSTON DAILY ADVERTISER.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

THE DAILY ADVERTISER BUILDING.

untrammelled expression of the editorial staff. No paper in the United States is edited with greater care and fidelity or with a more strict regard to the interests of our great nation. The expenses of its editorial and news departments are six times as great as they were only ten years ago. Its editor-in-chief and also its financial editor are proprietors, and constant writers, thus inducing the strongest sense of responsibility that self-interest can create. It has select and able special correspondents in the prominent cities of Europe and this country. It makes of literary, dramatic and fine art criticism a speciality, with the ablest writers to be had on its staff. The result is a large and increasing circle of readers, both in the business and the literary world, and among the very best people of the country. Indeed, the paper is the recognized organ of the banks and other monied institutions of Massachusetts, and of the different colleges and other literary institutions of New England.

The paper is located in a handsome building, of which a cut is herewith given, on Court street, and on the site of the very structure in which Benjamin Franklin made his advent as a journalist. Its composing room is lofty and commodious. Its editorial rooms are convenient and inviting; they occupy the entire fourth floor. The counting room, mailing room, and press room engross the first floor and basement. To accomplish the labor of printing and folding in season for mails, one of Hoe & Co's fastest presses, and four folding machines are run.

The Boston DAILY ADVERTISER was founded in 1813. In the following year it became the property of the late Nathan Hale, whose connection with it only ceased with his death. Mr. Hale was the first publisher and editor of a newspaper in the United States to print editorials daily and continuously, and his articles very soon acquired a national reputation. His writings were distinguished by breadth, intelligence and great candor. From the first, he rigidly excluded from the news and advertising columns of his paper everything which had an immoral intent or tendency, and this commendable rule is still adhered to. Mr. Hale likewise kept the editorial columns exclusively under his control and for his own use; and the frequent writings of Edward Everett, Jared Sparks, William Ellery Channing, and of numberless celebrated men of the day were inserted only as communications. The editorials were and are still the free and

## THE BALTIMORE AMERICAN.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

THE BALTIMORE AMERICAN.

them, "The Star Spangled Banner," first saw the light, having been set up by Mr. Samuel Sands, a gentleman still living, a few hours after it was originally written by Mr. Keys, and it was several times during the war of 1812 that the issue of the paper was omitted on account of the editors and journeymen being engaged in repulsing the British attacking North Point. There are other very interesting circumstances connected with the history of the AMERICAN, but space forbids their mention. In 1875, its old quarters having been found too contracted for its steadily-increasing business, a handsome and commodious edifice was erected for its accommodation on the corner of South and Baltimore streets, and the AMERICAN is now the possessor of one of the finest and most imposing newspaper offices in the country, and well worth a visit from the many travelers in transit through Baltimore this summer. Its counting-room is universally conceded to be the handsomest in the country. Visitors to the Centennial will find a painting of the building, and also a fac-simile of the first issue of the AMERICAN, on exhibition in the newspaper building.

The BALTIMORE AMERICAN was established August 20, 1773, by Wm. Goddard, a native of New England, and is now one hundred and three years old, being not only the oldest paper in Baltimore, but also one of the oldest and most influential in the United States. It was first issued as the *Maryland Journal and Baltimore Advertiser*, a name it bore until 1779, when it was changed to that under which it appears at the present day, THE BALTIMORE AMERICAN AND COMMERCIAL ADVERTISER. Mr. Goddard conducted the journal until 1793, and from that time to 1853 it passed through several different ownerships. In 1853 the firm became Robert A. Dobbin and Charles C. Fulton (the present senior proprietor), and was conducted under that firm until 1862, when Mr. Dobbin died and Mr. Fulton purchased his interest, thus becoming sole proprietor, associating his son Albert K. Fulton, in the future conduct of the paper, and at this period commenced its most successful career, which has remained unbroken to the present day. It was in the columns of this journal that our national an-

## THE COURRIER DES ETATS-UNIS, NEW YORK.

---

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

---

1828—1876.

---

The "COURRIER" has arrived to-day at that period of complete development to which a half century of hard work, independence and progress has conducted it.

Started on the 1st March, 1828—the date of its first number—it passed through many trials and difficulties before it achieved success, and was assured of a permanent existence. The idea of its founder was an ambitious one, viz.: to publish in the States an organ in the French language—the language of the highest European society—and to excite attention to French literature, which at that time was entirely ignored in this country. At that time there was no question of politics or of commerce, manufactures, international interests or of any private interests; but simply to introduce and inculcate the taste for French literature, which, in consequence of the very spirit of the country, has not, even since that time, made the progress here which could naturally have been expected. However, the idea succeeded. With its 8 pages in quarto, of 3 columns each, appearing every Saturday—at the annual subscription price of \$8—the "COURRIER," from its very commencement, was astonished at its success. Very soon, to keep pace with the demand for it, from new subscribers, it was obliged to reprint its earlier numbers. In less than two years from its start it became a semi-weekly; to its Saturday edition was added one on Wednesday; to be sure it consisted of 4 pages only, but it was one step in advance, and was justified by the patronage which it obtained.

However, the paper changed hands several times. In 1829 it passed into the possession of Mr. Felix Lacoste, who died consul-general of France at New York in 1859. In 1836 Mr. Lacoste transferred the "COURRIER" to Mr. Ch. de Belir, who was succeeded by Mr. Frederic Gaillardet.

It was in November, 1839, that Mr. Gaillardet took the editorship of the "COURRIER DES ETATS-UNIS," and from his very first number he inaugurated a programme which was a striking success. Mr. Gaillardet had seen clearly the brilliant opening that there was for a French newspaper in the United States. He said in substance—"There is a great field to be occupied by a newspaper which can become both the representative and the defender of the French nation in America, which will uphold the traditions of our manners, of our customs and of our language amongst the population of French origin; which can offer itself as a friend and ally to this population in upholding its native idioms and ideas, and in carrying the French diction to all parts of the new world—it will sustain and rally round it all those who speak this language and of these different scattered members it shall make, if it be possible to do it, one body and one spirit."

What Mr. Gaillardet said in 1839 we think to-day, and we repeat that a French newspaper in America has no higher duty and no position more useful than to act as an intermediary between all the groups of French nationality, not only in the United States, but throughout the whole of the new world; to make them known to each other; to bring them together as much as possible and to mutually assist them. It is this idea, constantly and energetically carried out, which is the secret of the greatest and most durable successes of the "COURRIER DES ETATS-UNIS."

It is this idea constantly kept in view by all those connected with its administration, since the time of Mr. Gaillardet up to the present date, which, repeated from the St. Lawrence to Cape Horn, has caused to spread in all the cities, towns and villages where Frenchmen are to be found, the name of one paper especially devoted to their interests and sufficiently established to defend them. Thus it is that, little by little, the

"COURRIER" is now to be found in the most distant points of the American continent, and that it is welcomed as a friend in all the French homes in the Canadas, Louisiana, the Pacific coast, Mexico, West Indies, and in Central and South America.

In saying this we do not fear any contradiction.

There may be great differences of opinion on political points, or on any other matter which is open to controversy; for we do not expect everybody to hold the same opinions as ourselves; but, at all events, we fear no denial when we proclaim positively that the "COURRIER," whilst continually reminding Frenchmen of the rights which have been conferred on them and the duties which are imposed upon them as members of the American family, has always been a newspaper thoroughly French; working ardently to rally—in the name of the mother country—the French people scattered throughout the vast extent of the American continent; studying their wants, sustaining their rights, and, above all, encouraging them with all the energy in its power to lay aside all useless differences and animosities, and to remember only that they are children of the same country, and that their highest interest, as well as their most imperative duty, is to hold together, to sustain and to help each other.

Few words are necessary to recall the progressive steps of THE COURRIER from its commencement up to the new epoch which opens to-day.

As we have previously stated, THE COURRIER DES ETATS-UNIS dates from the 1st March, 1828. Eighteen months after, a new edition, published on Wednesday, was added to the original Saturday one. This semi-weekly edition was sufficient at that time, when the news from Europe only reached us by sailing vessels, and when, besides, the postal communications with the interior of the country were so uncertain that, in the year 1833, our subscribers in Philadelphia complained that they only received their papers three days after publication.

Mr. Gaillardet's connection with the paper was coincident with the inauguration of trans-Atlantic steam navigation. Then commenced, also, the publication of this paper three times a week. The exciting period of 1848, in its turn created new demands, calling for frequent extras, making an average of four or five numbers per week. However, it was not until three years later—namely, in May, 1851—that the regular daily edition was commenced. A short time previously—namely, in the preceding month of April—was commenced a weekly edition of sixteen quarto pages specially intended for subscribers scattered throughout the interior of the country and for the benefit of our American readers. Towards the end of the same year—in November—THE COURRIER increased the size of its paper, thus enabling it to give more complete details of the subjects treated about. At last, on the 1st November, 1864, the paper was still further enlarged and appeared in its present form. Thus nothing further was needed (at least for the present) but the Sunday edition to meet the demands of a large and varied circulation.

To-day THE COURRIER DES ETATS-UNIS publishes a daily edition (seven numbers per week) at the price of \$12 per year. A weekly edition especially for Europe, same size as the daily edition, at \$6 per year. A weekly edition, containing twenty pages, at \$5 per year.

This last edition, of which the circulation is very large, goes more especially into the Western States, Louisiana, Cuba, the West Indies, Mexico, California, and all the countries on the Pacific Coast as far as Chili.

Such is the present position of THE COURRIER DES ETATS-UNIS, and it is a source of much pleasure to us to acknowledge that its progress has been constantly sustained, encouraged and accelerated by the sympathy of the large majority of the French residents in America. We thank them most cordially, and assure them that we shall endeavor in the future, as we have done in the past, to merit their good-will by sustaining their special interests in America, whenever the occasion therefor arises, and also to inspire Americans with respect and love for France, in return for the affection and respect which she has always shown to their country.

CH. LASALLE & CO., Proprietors,

No. 92 WALKER STREET, NEW YORK.

# "THE SUN," NEW YORK.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The prosperity of THE NEW YORK SUN is without a parallel in the history of the daily newspaper press. In proof of this, let the following figures testify. They show the number of copies of THE SUN printed every week during the year ending March 11, 1876 :

<i>Week ending</i>	<i>Copies printed.</i>	<i>Week ending</i>	<i>Copies printed.</i>
March 20.....	849,382	September 18.....	860,358

In printing these papers no less than three million, four hundred and twenty-six thousand, six hundred and ten (3,426,610) pounds of paper were consumed.

This exhibit almost passes belief. Had we not examined the books of the establishment, and copied the figures ourselves, we should have feared that a mistake had been made somewhere. But no mistake has been made. The circulation of THE SUN for the fifty-two weeks given, reached the enormous aggregate of *forty-six million, seven hundred and ninety-nine thousand, seven hundred and sixty-nine!* And its average daily circulation, on week days, is now continuously over *one hundred and thirty-eight thousand copies!*

Such unparalleled success, such unexampled popularity, such vast prosperity, can only come from a wide-spread and deep-seated recognition of the trustworthiness of THE SUN as a purveyor of news, and of its fearlessness and faithfulness as an expositor of public affairs, an exposé of public wrongs, an advocate of morality and religion, and an upholder of the rights of the people; and, in truth, as to these grand features of journalism THE SUN has an exalted and commanding position. It is independent of party. It aims always to bring out the truth, no matter who may be helped or hurt by its publication; to support honest and capable men for office, no matter to what party they belong; to secure the enactment of good laws, no matter by whom they are proposed; never in any case to admit into the columns of the paper anything that is contrary to public or private morality, or which cannot be read in the family circle; and always to maintain an independent attitude in the decision of religious questions, treating all sides with fairness, and giving all sides a hearing, and endeavoring to measure and judge them all by the standard of the divine laws.

It is a common remark in New York that "everybody buys THE SUN." Everybody knows that THE SUN tells the truth about public measures, and public men, and public plunderers, without fear or favor. Everybody loves to read the truth about his conspicuous neighbors, no matter how cutting it may be; yea, though it be "sharper than any two-edged sword, piercing even to the dividing asunder of soul and spirit, and of

the joints and marrow." This universal love of truth THE SUN, with marked success, perpetually aims to gratify, and therefore, in every number it has toothsome provender for the hungry multitude.

When one enters the first-floor corner door of the spacious and elegant edifice on the corner of Nassau and Frankfort streets, opposite the City Hall, which is known as THE NEW YORK SUN Building, he finds himself in

#### THE PUBLICATION OFFICE

of the establishment. This is a spacious room with lofty ceiling, running the whole depth of the building. It is divided into a front and rear office. In the front office are desks at which advertisers can write or modify their advertisements. One can hardly enter this office at any hour between 8 o'clock in the morning and 10 at night without finding it alive with employes and customers. There is a constant rush of persons bringing advertisements, coming for answers to advertisements, calling to purchase THE SUN, or to subscribe for it, and seeking information or bringing information; altogether presenting an animated spectacle.

The rear office in the Publication Room is fitted up with desks for the cashier, advertisement clerks, mail clerks, and other employes, and with the ponderous safes

of the establishment. It also contains the inner and private office of the publisher, Isaac W. England, Esq., who, though not old in years, is a veteran in newspaper affairs. Mr. England is widely known among newspaper and business men. His integrity, though so unbending as to make things uncomfortable for those who have "crooked" interests to serve, is tempered with such genuine good nature and consideration for the rights and feelings of others, that honest, industrious people like to work under his authority. He is a large stockholder in THE SUN, and cherishes an enthusiastic affection for the paper which vitalizes and reinforces all his faculties, and enables him to thrive bodily on his labors, as well as pecuniarily on his profits.

Having surveyed the Publication Office, let us now ascend to the

#### EDITORIAL DEPARTMENT,

or "Brain Box," as printers call it, of the establishment. This is situated on the third floor, and consists of a suite of four spacious rooms, forming an L, fronting on Printing House Square, and running along Frankfort street the whole depth of the building from front to rear. We enter the rear room, which is occupied by the reporters and editorial attachés of THE SUN office—all young men, full of vitality and enthusiasm, who love their work, and are proud of their paper. They shirk nothing, but are always ready to start for Coney Island or California, for Alaska or Australia; to take part in a railroad collision or a steamboat explosion; to go down in a diving bell or up in a balloon. These young men contribute much to the vivacity and variety of THE SUN, and are to be estimated among the elements of its success.

From the reporters' room, we pass into the apartment of the MANAGING EDITOR.

The position of the Managing Editor of THE SUN is a most important and onerous one. He has to keep a wide-awake eye not only on the entire city, but also on the Union at large, and has the whole reportorial force of THE SUN under his command. With the exception of such persons as the Editor-in-Chief admits to an audience, the Managing Editor has to meet all inquirers, and pacify or discipline all grumblers, and dispose of all comers who, having axes to grind, visit the editorial rooms of THE SUN for the purpose of having them brought to an edge.

Another important member of the editorial force of THE SUN is the NIGHT EDITOR. The Night Editor comes on duty at 4 o'clock P.M., and stays till the last page is made up, ready for the stereotypers. He finds out what has been done by his associates before he came in; looks over the proofs, makes needful corrections, and decides what must go in the paper and what can be omitted; examines and condenses correspondence which comes by the night mail, and also the late telegrams; writes notices of important matters and gives directions as to the nature and length of late reports, and fixes up news matters outside of the local departments. The Night Editor holds a position of great responsibility; inasmuch as, with the exception of such articles as the Editor-in-chief or the Managing Editor has marked "Must"—which means that articles thus marked *must go in*—he has absolute control of the contents of the paper; consequently, on his judgment in selecting articles to go in, the character of the paper of the next morning in a great measure depends.

In addition to the foregoing, there are the City Editor, the Day Editor, the Financial Editor, the Political Editor, the Market Editor, the Literary Editor, the Musical Editor, the Agricultural Editor, and the Mail and Weekly Editor, whose several functions are indicated by their titles. Then there is the Ship News, and the Telegraphic News, furnished by associations, by correspondents, and by agents. Then there are the Special Correspondents stationed in the important cities of America and Europe. Then there is the army of Voluntary Correspondents which the enterprise and liberality of THE SUN have called forth, "and which covers the land for multitude." Nothing of importance can occur anywhere, that some agent or friend of THE SUN will not at once telegraph to it, or describe by letter in case there be no telegraph station in reach. Liberal pay inevitably awaits all such voluntary news-senders or news-bringers at THE SUN office.

And still further: Besides all the aforementioned persons, there are gentlemen of high culture and special gifts on the editorial pay-roll of THE SUN, who constitute a powerful force, and are able to furnish, on call, articles of the highest merit on any subject which it may be desired to discuss in the columns of the paper.

We have still to mention the most important member of the editorial force of THE SUN, to wit: Charles A. Dana, Esq., the EDITOR-IN-CHIEF, whose function is one of

supreme importance. He must hold the entire force in a firm but elastic grasp, marshal all its diverse elements into harmony without impairing their individualities, and give consistency and unity to the general sweep and purpose of the journal. He must scan, day by day, the events of the world, and single out for publication and comment those which are either of the most general or special importance, and indicate to his subordinates what they are severally to write about, what the scope and tone of their articles shall be, and what shall be the policy of *THE SUN* on every subject.

Mr. Dana is the largest stockholder of the Company, and the editorial monarch of the establishment. His sway is imperial and despotic. No one does or can call *him* to account. He has had large experience in newspaper affairs, in subordinate as well as controlling positions. He has been reporter, city editor, managing editor, New York correspondent, Washington correspondent, Paris correspondent, and foreign correspondent generally. Like Napoleon, therefore, he knows his profession through all its grades, and can judge and do justice to all his subordinates, and pity all their woes because he has felt the same. He has a wide knowledge of public affairs, and also of business, commercial and scholastic matters; has traveled much, both in Europe and America; speaks the modern languages with fluency; has an intimate acquaintance with many of the leading scholars and statesmen of both hemispheres; is familiar with literature, philosophy, and metaphysics; sympathizes with the progressive and ameliorating movements of the times; has always been an audacious and plucky newspaper belligerent, but fights without malice, and is a generous conqueror. Several years ago it was said of Mr. Dana:

"He receives the hardest blows with serenity of countenance and of spirit, as though he heard gentle angels whispering: 'Peace, Charles, prithee peace! Possess thy soul in patience and bide thy time, for that vain man weareth a scalp wherewith, in the Providence of God, thou shalt ere long adorn thy wigwam!' and he doth possess his soul in patience, and he also bideth his time, and finally, like a true journalist, he conspicuously takes the scalp of the offender at the very time it would be most awkward for the victim to appear in society bereft of that ornamental hereditament."

This declaration seems to have been instigated by the spirit of prophecy. One after another the foes of *THE SUN* have gone down before the prowess of its "Chief," until there is no other wigwam in the country so rich in scalps as Mr. Dana's.

Mr. Dana is a hard worker. *THE SUN* is his pet. He loves it and is proud of it. He keeps a vigilant eye upon everything; and, like his subordinates, is ready to do any piece of work whatever that may come to his hand. His literary and editorial executiveness is surpassingly prompt and decisive. This helps him to go through his work with a celerity which relieves it of much of its burdensomeness. He is genial and companionable with his assistants, but no one can more effectively assume the imperial role when distinctions of position should be made apparent, and the lines of order should be sharply drawn.

Mr. Dana is in all respects a prosperous gentleman. His copyright as editor of Appleton's *New American Cyclopedia* is large, his receipts for salary and dividends from *THE SUN* are much greater, and altogether he has a most princely income.

The members of the editorial force of *THE SUN*, one hundred and five in number, are loyal to the paper, and to one another, from the Chief to the lowest member of the staff. The reporters stand by *THE SUN*; the Managing Editor stands by the reporters; and the Editor-in-Chief stands by the entire force. This is an important point, and gives a unity, and enthusiasm, and self-reliance to the men which nothing else could inspire.

And now let us see how all the work done by this array of accomplished and industrious men is finally brought to a focus in the pages of *THE SUN*.

It is 10 o'clock at night as we mount to the editorial rooms. The apartment of the Editor-in-Chief, in the northeast corner of the edifice, looking out upon City Hall Park, is all aglow. Ordinarily, he only comes down at night to take a general survey of affairs and look over his proofs, but to-night matters of uncommon importance have come to hand, and he is at his post, with a full staff, at a later hour than usual.

Everybody seems to work as though under whip and spur. Reporters from the public meetings, fires, fights, and scenes of accident and crime, rush in with their notes and set to work as if for life. Messengers hurry to and fro from telegraph offices. Other messengers likewise hurry to and fro from divers other points. Visitors come hurrying in, all out of breath, wanting to see the Managing Editor or the Chief, on matters of pressing importance, and all are disposed of with promptness, celerity

and courtesy. Mangled and tumbled papers from the city, the country, and the uttermost parts of the civilized world, lie in heaps upon the floors. The pens scratch, the scissors click, the Chiefs bell rings sharply out for the boy, and the "condensers"—three men whose only business is to take the core out of correspondence, reports and extracts, and articles from other papers—are "refining as with a refiner's fire" the matter which is to appear in the morning's paper.

The space in THE SUN is too valuable to admit anything except the very cream and marrow of the news and information to its columns; wherefore, telegraphic dispatches are reduced to "Sparks," long communications to paragraphs, paragraphs to "Personals," and articles to "Jottings."

THE SUN Condensers are men who can see at a glance what is interesting in an article, and what is useful, and what is needful, and what is of no account; and they "kill" without mitigation or remorse.

And now midnight approaches; the turmoil has died away; the Chief and his immediate staff have disappeared; the reporters have gone, except a few who have but recently come in; and the Managing and Night Editors, with a few trusty assistants, are all that remain on duty. And now let us "follow copy" up-stairs to the

### COMPOSING ROOM,

where the type-setters ply their nimble fingers.

The composing room of THE SUN office is a fine, light, airy apartment, and is fitted up with the utmost elegance and convenience. The exact cost of the outfit—including type, furniture, and materials for stereotyping—was \$12,290.72. The regular force of compositors, or type-setters, is sixty-five; and a fine-looking, intelligent company of men they are.

The compositors have been at work for many hours. They take it easily at first, from 3 P.M. to 5; then there is a recess of two hours, and at 7 o'clock they come back for the real work of the day, and stay till 2 o'clock, A.M., or as much longer as may be necessary. As a usual thing, when 2 o'clock comes, all but four of the compositors are allowed to go, and the four retained are kept till the paper is sent to press. The compositors work by the piece, and their average earnings are \$25 a week; but some of them make \$45 a week, when they do their best.

After the type-setters have been at work for an hour, or less, the proof-taker begins his work. The type which has been set is put in an orderly way and fastened in its place on long brass beds called galleys, which are then run under the proof-press, whereby impressions, or proofs, are taken on long slips of paper. These are sent to the proof-readers, who read them over for errors, and mark all mistakes on the margins of the proofs, which are then taken back to the compositors, who correct the errors in the type, after which new proofs, called revises, are taken, to see if everything is right. If any errors are found in the revises they are also marked and corrected; and when everything has been at last set right in a galley of type, it is transferred to the make-up table; that is, to the table where the type is finally put in the forms or pages of the newspaper.

About 11 o'clock the foreman of the composition room sends word to the Night Editor that he is ready to "make up;" that is, that he is ready to put the type into the pages, and send them to the stereotypers. On receiving this notice the Night Editor appears with a separate set of proofs, taken expressly for him, and over which he has been studying and working for several hours.

There is already matter enough in type to fill the columns of the paper twice over, and more is coming all the time. The telegraphic lightnings are pouring it in; the reporters are writing it out by the column; and messengers are coming with all manner of communications—"Very important, sir, and *must* appear in the morning's paper, sir."

And so the Night Editor works away, studying over his proofs, gradually singling out what must go in, whether or no, and no mistake; also what *may* be left out; also what *shall* be left out. When, therefore, he receives notice from the foreman of the composition room, that he is ready to "make up," the Night Editor goes up to the fifth story with a clearly defined purpose. Under his direction the foreman rapidly lifts column after column of the news and editorials into the form which is to constitute the second or editorial page of the next morning's SUN. The last page and the third page, composed largely of advertisements, have already been made up and sent

to the stereotypers. The first page, which is the last one made up, is yet to come. Meanwhile, let us step into

### THE STEREOTYPING ROOM

and see what the Vulcans are about.

The stereotyping room is one of the most interesting departments of THE SUN establishment. It is occupied, and the stereotyping process performed by eight splendid fellows, whose brain and muscle, as well as their skill and fidelity, are of a high grade.

The stereotyping process is peculiar, and differs widely from that in ordinary use. The Bullock presses used in printing THE SUN require stereotype plates which can be affixed to their cylinders, and hence the plates must be cast in half-circles; and they must be cast, too, with the utmost expedition and in unusual numbers. There are seven presses used by THE SUN, each of which prints two complete copies of the paper at an impression. Therefore, *no less than fourteen complete sets of plates have to be cast for THE SUN, so that it can have fourteen papers printed consentaneously, in order to get off its immense edition within the brief period between the hour when the paper goes to press and the time of its delivery to buyers, and at the post-office for the early mails.* The process of stereotyping is performed in this wise:

The flat page of type is first warmed on a hollow iron table heated by steam, then a sheet of thick paper, such as steel engravings are printed on, which is chemically prepared by soaking in a mixture until it becomes nearly of the consistency of paste, is laid upon the face of the type, and beaten down with a heavy and stiff brush, until every letter, rule, and point is perfectly moulded in the soft mass of paper. All hollow places are then filled up with a preparation of plaster of Paris; after which another sheet of the prepared paper is laid upon the first, and beaten down in the same manner. By this means a substantial matrix of the entire page is formed. The type and matrix are then swathed in blankets, placed on the hollow, steam-heated table, run under a press on one end of the table, and subjected to a heavy pressure, while at the same time it is baked by the heat. It is then taken out and the paper matrix is removed from the type. It is firm, but pliable, and capable of resisting a high degree of heat. It is the flexibility of the matrix, even more than the celerity with which it can be produced, which gives it its peculiar value; for it is its flexibility which enables a cylindrical plate to be cast from it.

After the matrix has been perfected as above described, it is placed in a reversed position in an iron mould of the exact curvature of the press cylinder; the melted type metal is then poured in, and in two minutes a stereotype plate of the page of type in the form of a half-circle is taken out and handed over to the trimmers to be fitted to the press cylinder; the mould is again filled with metal, and another plate is cast; and so the process goes on, until fourteen casts of each page have been taken, trimmed, and sent down to the press-room.

We will now step on the elevator along with a set of the stereotype plates and descend with them to

### THE PRESS-ROOM.

The Press-Room is situated in the basement of the edifice, and is a most capacious apartment. When we arrive at the press-room, at half past one o'clock in the morning, matters are in no very lively trim. Everything is quiet. There is not yet even a hiss of steam. Stalwart men are stretched out on huge piles of paper, fast asleep. Some of them lie face downward, with their arms stretched out at full length, and sleeping as though they would never again wake. Others are lying all in a heap, others flat on their backs, showing grimy but honest faces; and all are sleeping soundly. Other men are bringing in huge rolls of paper from the dampening room and arranging them conveniently at hand for the pressman.

The Bullock press, on which THE SUN is printed, prints from a continuous sheet, which is wound up in the form of a huge cylinder. The machine for wetting down or dampening the paper is so constructed that it unwinds it from one roll and at the same time winds it up into another roll; and as the paper thus passes from one roll to another it is subjected to a uniform shower of the finest spray, which dampens it in every fibre to just exactly the degree which is requisite for it to print to the best advantage—the construction of the press, the rapidity of the motion, and the force of the pressure, all considered. Attached to the dampening machine is an invention of Mr. England's, which ingeniously measures the roll of paper and tells just how many SUNS it will make. This is done for the purpose of checking the tendency of paper manufac-

turers to put so much body in their stock that a roll of paper of given weight sometimes falls short in length to the extent of many copies of THE SUN.

And now, as the pressmen have begun to wake up, and are beginning to put the stereotype plates on the cylinders, and the steam begins to give tokens of its coming, let us go up to the composition room again, where over the first page of THE SUN the final struggle of matter against space is to begin. "This," says the Night Editor, pointing at it as he speaks, "is the costliest page on this planet." It is now half-past one o'clock A.M. The form must be in the stereotyper's room in fifteen minutes. There is matter enough on the make-up table to fill four pages, and every line of it is important. What's to be done? especially as a fresh batch of copy has just come up marked "MUST," from the Managing Editor, who is still hard at work below. Now is seen the value of understanding *every part of one's business*, especially the mechanical part. The Night Editor is a practical printer, copy-cutter, proof-reader, anything and everything that may be needed. He looks over the type—does not have to resort to the proofs—and orders out this and cuts down that, and reads the proof of new articles from the type—and finally "Good Night" comes from the telegraph offices—and the page is completed, and the form is locked up (that is, fastened so the type cannot fall out) and trundled into the stereotyper's room exactly at 15 minutes to 2 o'clock A.M.

And now look at the stereotypers. They are also on the home-stretch, and how magnificently they work. Every man knows just exactly what to do, and does it to perfection just in the nick of time; and the total result is that four casts of the first page of THE SUN are on their way to the lower regions in just twenty minutes from the time the stereotypers received the form. That is only five minutes to a cast. The other ten casts follow at a more rapid rate.

From the stereotype room we now go down to the publication office, to see the newsmen and newsboys buy their checks. When the delivery of the paper begins, which will be in a few minutes, the rush will be so great that there will be no time to make change; and so newsmen and newsboys provide themselves with metal checks, about the size of a two-cent piece, on which is stamped the number of papers for which they have paid. If a newsboy wants 12 papers, he pays 16 cents—THE SUN is sold to him at 1½ cents a copy—and receives a check which entitles him to 12 papers. This check he presents to the man below of whom he gets his papers, who delivers his 12 SUNS to him, and drops the check through a hole in the delivery counter, into a box kept for the purpose. The smallest check calls for three papers, and the largest for eight thousand.

On entering the publication office, we find a number of men and boys buying their checks, and several tired little fellows lying asleep on the floor; and on the grating outside, through which the warm steam and hot air come up, are other children also lying asleep. It is a raw and chilly morning, and the "iron bedstead," as the little fellows call the grating, affords them a luxurious couch, through which the warmth comes upon their pinched and withered and ill-clad bodies like airs from Heaven.

And now back to the press-room again. At 7 minutes to 2 the first press starts and delivers 200 papers a minute. In a few minutes the counters begin to count off, and get the papers ready for delivery to the newsboys and newsmen. At 2 minutes after 2 the second press begins to throw off its 200 SUNS a minute. At 9 minutes after 2 the third press starts; and so they keep on until all the presses are running and throwing off fourteen hundred SUNS a minute, two of the presses printing 300 papers a minute each. Although the SUN now has seven presses in operation, the popular demand is so constantly increasing that it has ordered another of double size, and the capacity of 50,000 per hour, which, after being shown at the Centennial Exhibition, will be set up in the press-room.

The counting of the papers is one of the most interesting and astounding performances in the whole business. There is one man who counts 300 a minute, and another who can count 400 a minute. Let the readers of this article try to count 400 a minute on their fingers, or try to count 400 pins or 400 peas in a minute, and they will get some notion what it is to count that number in that time.

The fact is, the counting of newspapers in the SUN office has been refined into an art as delicate as that of piano playing, and it is performed very much in the same way. The counter throws a pile of damp papers on the table, strikes the heap in the stomach with his left hand, twitches up the edges with his right so that they stand slightly apart, and then, with the fingers of his left hand runs them off in groups of five,

almost exactly as a pianist runs off arpeggios on his instrument, and with an equal precision and delicacy of touch.

The papers are usually counted off in bundles of fifty, but sometimes in larger quantities. The delivery of the papers to the buyers begins at half-past three. The number taken by the different buyers the morning we were present varied from 3 to 27,000. The three were taken by a little boy about seven years old, the 27,000 by a newsdealer, and we are informed that the whole number delivered by a quarter past 5 o'clock was 126,600. The additional sales, and the papers sent to mail subscribers, brought the whole number up to 138,993.

Having thus followed the NEW YORK SUN through its entire daily and nightly growth, from the first article written to the point where the presses are dropping fourteen hundred complete copies a minute at our feet, we now take our leave, and take a Third Avenue car for up-town. By the time the car arrives opposite THE SUN office it is comfortably filled, and a newsboy rushes in it, crying "Here's your NEW YORK SUN," and sells four papers on the spot. We look at the City Hall clock: it is just 48 minutes past 3 o'clock. Thus early does the sale of THE SUN in the streets commence.

The number of persons employed in THE SUN office is two hundred and forty-nine. The expenses of the establishment for the week ending March 11, 1876, were *fifteen thousand eight hundred and seventeen dollars and seventeen cents* (\$15,817.17), and it was not an expensive week either, the items of which are as follows:

Editorial expenses, including } salaries, telegrams, etc.,.....	\$3,826.83	Ink,.....	\$138.72
Publication salaries,.....	429.51	Paper,.....	7,074.55
Mail room,.....	197.00	Coal and Gas,.....	176.50
Composition,.....	1,486.91	Steam-power,.....	70.00
Stereotyping,.....	296.00	Postage,.....	330.68
Press room salaries,.....	940.47	General expenses,.....	750.00
" expenses and supplies,.....	100.00		
		Total for the week,	\$15,817.17

Dividing this amount by seven, it gives a daily average of \$2,259.59, the outlay incurred that every buyer of THE SUN may get his copy for two cents. If a buyer of THE SUN were to set to work to make the copy which he gets for two cents, he couldn't begin to do it for \$2,259.59, without first incurring an outlay of a fortune to start with, and then spending a quarter of a century or so in learning how to do it.

The expenses of THE SUN are so enormous that one naturally wonders where the profits come in. They come from the sale of the papers and from subscriptions and advertisements.

In addition to their enormous daily issue, THE SUN PRINTING COMPANY publish THE SUNDAY SUN (8 pages), at \$1.20 a year, and THE WEEKLY SUN (8 pages), at \$1.20 a year. THE WEEKLY SUN is intended more particularly for country circulation, and is filled only with the choicest news of most interest and value to those who do not care to take the New York daily papers. Great care is bestowed upon its agricultural and market reports; the farmer and the country merchant are provided with such items of intelligence as most closely enter into the warp and woof of their prosperity, and the matron and children are not forgotten, but are supplied with such genial and instructive reading matter as one loves to peruse in the family circle and enjoy with those who sit around the same hearthstone.

It was supposed to be a dangerous experiment for THE SUN COMPANY to attempt to publish a two-cent paper at a cost surpassing that of any four-cent paper. But the experiment has succeeded so well that THE SUN could now live without an advertisement, and Mr. Dana's policy is always to make advertisements give way to the news. The people appreciate such enterprise and liberality, and THE NEW YORK SUN is having greater success than ever before. It is emphatically *the people's* paper. It always stands by the workingmen and all movements for the improvement of the condition of the masses, when they need support; and it also stands by them in an effective manner. It does them downright, substantial service. It also always takes the lead in exposing corruption in high places, and in bringing the people's unfaithful servants to the bar of public opinion. For these and many similar reasons, THE SUN has a strong, enduring hold on the affections of the masses and the confidence of the nation at large.

And then the fact that it gives all the news of the Associated Press at one-half the price which the other papers of the Association charge for it, in addition to what its

own exclusive enterprise furnishes, and the fact that it gives the combined results of the labor and brains of two hundred and forty-nine men, winnowed of all chaff, skimmed of all scum, and purged of all sediment—the fact, in short, that it every morning gives every one of its buyers \$2,259.59 for two cents, places the ever growing prosperity of THE NEW YORK SUN beyond all question. Its compactness is also a strong point in its favor. One can attack its contents with a fair hope of being able to master them within a reasonable period.

In the antediluvian days, when human beings lived away up towards the thousands, such a feature would not have been of so much importance. In those long-drawn times a sprightly girl of sixty, or a robust youth of ninety, or even a middle-aged man or woman two or three hundred years old, could take things moderately; but it is ordered otherwise in this day, and especially in this metropolis. Here, life is cut short at both ends, and crammed to choking in the middle; the day's hurly burly's never done, and there's only time to read THE SUN.

## THE EVENING JOURNAL, OF JERSEY CITY, N. J.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The EVENING JOURNAL of Jersey City was established in May, 1867, its publication and editorial office being combined in one small room, and its total available capital at end of first week was \$119.00. Its success has been remarkable, even in this land of rapid growths. It is strictly a "local paper," which, while giving all the telegraphic news of the day, yet concentrates its attention chiefly on the local news of the thriving community in which it is published, and it is therefore a favorite visitor at every tea-table and the leading advertising medium in Jersey City. The population of Jersey City, which in 1850 was about 16,000 is now 120,000, and rapidly increasing. The success of the JOURNAL is attested by the four-story handsome granite and brick building, size 25x90 feet, 37 Montgomery street, Jersey City, erected for it in 1874. It is printed from the most remarkable Web printing machine yet invented. Its proprietors, Messrs. Pangborn, Dunning & Dear, who are experienced newspaper men, and thor-

oughly appreciate the wants and requirements of the community amongst whom they labor, have brought the JOURNAL to a high pitch of excellence, and have received, as a reward of conscientious work, cordial support and approbation.

# THE NEW YORKER STAATS ZEITUNG.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The progress, development, and present position of this paper form one of the most remarkable existing proofs of the success with which industry, energy, perseverance, and faithful and righteous management, when applied to the Press, are crowned in the United States. The New York STAATS ZEITUNG was first published in 1834, as a weekly paper. As such it was well received and supported, but the patronage accorded had so far augmented, and the demands of the Teutonic population so increased in 1842, that in that year it was issued as a tri-weekly publication. The mutation proved the calculations of the projector to be soundly based. The sale of the journal grew, and its reputation advanced correspondingly, and three years later, when it was converted into a daily paper, it entered on its more useful career with a propitious future before it. At this time, notwithstanding its reputation, the circulation of the paper was, however, comparatively insignificant, amounting to about only 3,000 copies, and it was not till 1849 that the grand development leading to its present commanding position can be said to have taken place. Even then, for some years, its progress was not over-rapid, and Mr. Oswald Ottendorfer, the present proprietor and chief editor, avers that if, in 1852, when he became first connected with the STAATS ZEITUNG, any one should have suggested the possibility of the paper reaching its present large circulation, he would have considered the idea visionary and absurd. But what was deemed a quarter of a century ago an impossibility is to-day an accomplished fact.

In order to present a trustworthy opinion of its circulation, we have carefully prepared from the office books the following statement of the average daily circulation of the N. Y. STAATS ZEITUNG for every week during the first quarter of the current year:

<i>Week ending</i>	<i>Average daily.</i>	<i>Week ending</i>	<i>Average daily.</i>
January 6.....	47,200	February 24.....	49,400
13.....	47,300	March 2.....	49,600
20.....	47,300	9.....	49,700
27.....	47,400	16.....	49,800
February 3.....	48,500	23.....	49,900
10.....	49,600	30.....	49,700
17.....	49,800	April 6.....	49,600

In addition to this daily circulation, a weekly and a Sunday edition are printed, the circulation of the former being principally outside the city, in the Middle, Western, and Southern States. The Sunday edition is a prominent literary paper of acknowledged merits, and is very widely read.

The above statistics show that the New York STAATS ZEITUNG has the largest circulation of any daily paper printed in the German language. None in the United States will compare with it at all, and we are reliably informed that the principal journals issued in Germany—in Vienna, Berlin, Cologne or Frankfort—are not its peers. It is not necessary, however, to confine the comparison among German journals. The New York STAATS ZEITUNG will well bear to be contrasted with its English contemporaries of the city. There is that in its circulation which is remarkable, and indicates a superior class of readers. It is this: nearly all the copies of every issue are taken by regularly appointed carriers to the houses of subscribers. Compared with its English contemporaries, it is vended but little on the streets. Evidently, then, its subscription list is very heavy, it being very doubtful if even the *Herald* or *Sun* can claim a heavier.

When it first appeared, the ZEITUNG was published in Nassau street; next it was removed to Frankfort, and afterwards to William street. In 1857 it was located in an establishment specially erected for its accommodation, at 17 Chatham street, opposite the City Hall, whence it continued to issue for many years. But the constant increase of business, together with the prospect that the East River Bridge will, when complete,

have its landing on the spot where that office is situate, constrained Mr. Ottendorfer to seek another place of publication. The choice of site was a matter of no little importance. Printing House Square is the most desirable location for the business place of a newspaper in the city. Therefore, to retain a holding there must be accomplished if possible. But no suitable building presented itself. Now it was that Mr. Ottendorfer determined to carry out his long cherished desire to erect an edifice for his paper which should be an ornament to the city and a monument of newspaper enterprise. In pursuance of his resolve, he bought several houses on Tryon Row, extending from Chatham to Centre streets, facing Broadway, and thereon has placed a structure whose dignity and gracefulness impress all beholders. It was completed in 1872, and first occupied in the early part of 1873, and no one who examines it can fail to admit that its projector, Mr. Ottendorfer, has succeeded remarkably in his efforts to secure a building exteriorly handsome and complete in its internal arrangements.

NEW YORKER STAATS ZEITUNG BUILDING.

The edifice forms the north side of Printing House Square, on which nearly all the principal daily morning papers published in the City—the *Sun*, the *Tribune*, the *Times*, and the *Herald*—have their palaces. It closes the circle formed by the City Hall, and the new Post Office, and gives an appropriate finish to one of the most interesting parts of the City. The style of architecture employed is the modern renaissance, the first story being built of the dark bluish Quincy Granite and those above it of the lighter Concord Granite. The effect of this combination is to relieve the building of the heavy appearance usually characterizing granite structures. The ornamentation, which is rich without being redundant, further aids the accomplishment of this end, whilst the portico, extending through two floors, and surmounted by bronze statues of Guttenberg and Franklin (the one the inventor and the other the American representative of printing) is a central feature which is never beheld without admiration. There is a pleasant harmony in the whole arrangement, and the remark is often made by gentlemen of cultivated taste and great experience that among all the majestic public buildings erected in the city in recent years, that of the STAATS ZEITUNG bears the palm for combining beauty and utility.

A model exterior was not, however, what Mr. Ottendorfer alone aimed at. His in-

tention was that this should be an accompaniment only to a complete, thoroughly practical newspaper establishment. He therefore, in preparing the plans, made a careful study of all the improvements in newspaper economy, and introduced all such as commended themselves to his approbation. All other considerations were made subservient to this end, and how fully this was accomplished a visit to the STAATS ZEITUNG office will convince every observer.

Entering the publication office, situate on the ground floor at the south-east corner, one is immediately struck with the loftiness of the apartment, next with the elegance of its fittings, and then with the evidence of business-like arrangement, everywhere present. For height and good ventilation the STAATS ZEITUNG publication office has not its equal in the city. The consequence of this grand provision being that the *employees* are healthy and vigorous, and that the evil effects of a vitiated atmosphere are never experienced even when the congregation of people at the office is greatest. The woodwork in this department is of rich polished walnut, exquisitely carved, and set off with artistic bronze adornments, affording a charming contrast to a splendid specimen of German marble (expressly imported for Mr. Ottendorfer) which forms the slab at the aperture through which advertisers and others confer with the clerks. Writing desks *en suite*, and of the most approved pattern, are placed on the elegant tiled floor for the accommodation of visitors; all *minutiæ* are carefully disposed; and pervading everything is a conformity with the architectural design.

Going up a noble stairway, the walls at the side of which are tastefully frescoed, the editorial rooms, situated on the fourth story, are reached. Whilst ascending, the sustained elegance of the building cannot fail to impress any visitor. The landing-place at each story is tiled just as the publication office is; the same sort of adornments observable in the hall are presented at the top of the edifice; everything bespeaks thoroughness.

The editors' rooms are arranged methodically and comfortably, being so placed as to expose the busy workers to the least danger of distraction. What hundreds of their literary brethren sigh for in vain—fresh air and plenty of it—they enjoy without let or hindrance. The several offices connect with each other, so that no difficulty stands in the way of ready communication between the editor-in-chief and his subordinates; speaking tubes render the transmission of messages to printers or clerks easy; and copy-lifts expedite the transmission of copy or correspondence to and from the *sanctum*.

Above the editorial department, on the top floor of the building, are the composing room and stereotyping foundry—the most excellent in the city—devised for the comfort of work-people and the facilitation of the operations conducted in them. Everything is clean, orderly, systematic, and the looks of the workmen betoken that the sanitary arrangements have not been carried out in vain.

The STAATS ZEITUNG forms are stereotyped every morning, and as the whole operation has to be completed in about 18 minutes, the most perfect machinery is necessarily employed. The pages of type having been trundled into the foundry, an accurate mould of them is taken on wet papier-maché, which, when dried by heat, is placed in a massive iron casting box of curved shape, into which the seething metal is poured. A good cast having been secured, the plate is transferred to the planing machine, where all irregularities are removed, and in a few minutes (the finishers having removed any crudities) it is fit to be affixed to the cylinder of either of the two splendid six-cylinder Hoe presses on which the issue is daily worked in the basement. In the foundry a small engine is used to drive the machinery, the steam being supplied from the basement. The means of heating the building are also furnished from this sub-ficial department, and are very complete.

Descending by an elegantly fitted elevator to the press-room we enter a series of underground apartments. The elaborate machinery at once attracts notice, but the next subject to arrest the attention is the excellence of the light, which, though conveyed artificially, is so good as to render the use of gas unnecessary during the day, save in retired places. The two presses employed to print the STAATS ZEITUNG will turn off together 20,000 an hour, the motive power being given by a 36 horse-power engine constructed by Wright & Co. Two of these splendid machines stand side by side, though but one is used at a time, the object being to obviate delay in printing the paper in case accident should befall either. Near at hand are the folding machiæ, all of the most approved pattern and capable of folding neatly the papers as

fast as they are printed. The mailing apparatus is likewise close at hand, this also being of the most approved construction. The immense boilers which furnish the steam for the machinery and the whole building are located in vaults under the sidewalk on the Chatham street side of the building. On a level with these, but on the opposite side of the floor, there is another vault for the storage of paper, in which several thousand reams are constantly kept, and an aperture for the purpose admits of fresh supplies being slid down a chute. In close contiguity is the distributing room, where the papers are handed every morning to the numerous carriers, who are invariably promptly on hand when an issue is coming from press. To this a half story is devoted. The government of this department is singularly excellent. Each carrier is a man of proved reliability. Promptness and precision are points which the indefatigable carriers vie with each other to excel in, and it is next to impossible for any subscriber to the NEW YORK STAATS ZEITUNG to be disappointed of his paper at the breakfast table. Each of the corps has a district assigned him, and is protected from the encroachments of rivals by provisions designed by Mr. Ottendorfer to benefit both the distributors and his patrons. There is not one of the other daily papers that has anything approaching to the completeness of this system.

Indeed, everything possible appears to have been done to obviate delay in the delivery of the paper. Even the building itself was from the first designed to subserve this end, and for that reason chiefly it was that each and every room in the whole of the colossal edifice was made independently fire-proof. It seems impossible that the building could be destroyed by fire, or that flames could even extend beyond the apartment in which they might have their origin. The success of the New York STAATS ZEITUNG, in a business point of view, is in no small degree due to the active interest which Mrs. Ottendorfer, the wife of the editor and proprietor, takes in it. This lady is every morning in the publication office, and superintends and directs the business affairs with an ability and circumspection only to be acquired by long experience, and that faculty of comprehensive tact which are commonly believed to be the exclusive characteristics of men; her example demonstrates that, without claiming a larger sphere of rights for the so-called weaker sex, ladies can become eminently useful in the daily exertions of life, if they understand how to properly exercise their influence.

The New York STAATS ZEITUNG as it at present stands before the public is the result of the activity, industry and intelligence of our citizens of German descent. But it has in no small degree itself contributed to bring that class of our citizens to the respected position which they occupy. Its influence in the formation of their views, modeling their opinions, and its usefulness in correctly apprising them of important national and local issues, can hardly be over-estimated. If the secret of its great influence be sought it will alone be found in the sincerity and disinterestedness with which the STAATS ZEITUNG urges its arguments. These are the only qualities which could possibly have gained it the consideration it enjoys among such thoughtful and well-instructed people as compose the Teutonic element of our population. The tendency of the paper is conservative. Being inspired with a conviction of the necessity of the preservation of the Union, it supported before the war the democratic party, believing it to be the one giving the best guarantee for the undisturbed preservation of the Union, and after the outbreak of the Rebellion its editor and proprietor, in words and facts, enthusiastically supported the Union cause.

Of late years, however, the NEW YORK STAATS ZEITUNG has been independent in politics, its principal efforts being directed against corruption and the abuses in our public life and to endeavor to impress upon its readers the necessity of making honesty, faithfulness and capability the only standard by which candidates for all offices should be judged, regardless of party dictates or promptings. To this course it consistently adheres, and its increasing popularity is the best possible voucher that this stand is one which commends itself to public approbation.

# THE NEW YORK TIMES.

---

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

---

The projectors of the *N. Y. TIMES* promised in their prospectus to make "at once the best and the cheapest daily family newspaper in the United States." Twelve months later, they were able to declare that it had been "immeasurably more successful, in all respects, than any new paper of a similar character ever before published in the United States." With justifiable exultation, and with strict adherence to truth, they asserted that "in circulation, in income, in influence, in everything which goes to make up the aggregate of a successful journal, it challenges a comparison with any other paper ever published." Such, in brief, is the story of "The Year One," as told by Mr. Raymond, on the 17th September, 1852.

The *TIMES*, then, was a success from the beginning. And it was a success because it met an urgent want of the community, because to enterprise in the acquisition and publication of news it added courage, moderation, dignity, ability and genuine consistency in the discussion of public affairs. The field was already largely occupied by journals which looked with no friendly eye upon the new comer. There was coarseness

in the controversies of those days, and the contrast maintained was between indifference to principle on one hand, and a dangerous tendency to extreme principles on the other. The orthodox Whig newspaper vied with the organ of Democratic opinion in obedience to the slave power; the radical Whig became the champion of Socialism, and the cause of human liberty suffered from an advocacy which identified it with opinions that were repugnant to the American people. A need of journalism different from either was felt, and the *TIMES* met it boldly and well. "We shall be conservative in all cases where we think conservatism essential to the public good," was one of its opening assurances; "and we shall be radical in everything which may seem to us to require radical treatment and radical reform." This discriminating judgment was one of the secrets of the remarkable influence and prosperity which attended the establishment of the *TIMES*. Its excellence as a newspaper was a potent factor in the sum of its success. The care with which it was adapted to the tastes and wants of the family, the high standard of purity which it maintained, and the literary culture which shone in its columns, were marked and important sources of power. But its weight in political discussion—the authority it exercised alike in the affairs of the State and of the nation—was to a large extent traceable to the skill and effect with which it imposed restraint upon the conflicting ultraisms of the time. It infused the vitality of progress and the courage of conviction into the dominating conservatism; it held in check an aggressive radicalism, and subjected it to the discipline of the Constitution and the law. Never leaving its readers in doubt as to its position on any important question—never evading a question because it was beset with prejudice or linked with powerful vested interests, it adhered steadfastly to the course in the first instance marked out. It was vigorous, without being offensive; courteous, without being cowardly; and it appealed always to the intelligence and moral principle of its readers.

Identified with the Free Soil Whigs as long as the Whig party lasted, the *TIMES* largely contributed to the influences and purposes which culminated in the organization of the Republican party. The Pittsburg Convention and the nomination of Fremont were events with which the historian will associate the services of the *TIMES*. The previous four years witnessed a struggle bitter and unrelenting, in which the *TIMES* took a conspicuous and honorable part. As a newspaper, it had kept pace with the march of the age. Its size had expanded, and with the enlargement of its resources had come increased efficiency in all the general departments of a metropolitan journal. The principles which had governed it remained unchanged; the policy it did much towards moulding and crystallizing found final expression in the election of Lincoln. The position he assumed corresponded very closely with that which the *TIMES* had uniformly held. And when the madness of Southern faction forced upon the nation a struggle for its life, the *TIMES* accorded his administration an ungrudging, unqualified support. It had no doubts as to its duty, and never paused to count the cost of the difficulties it encountered. No better record of the war exists than that which might be compiled from its columns.

The views attributed to American statesmen by Victor Hugo and Louis Blanc in their appeal for the Philadelphia Exhibition reflect the policy upheld by the *TIMES* throughout the era of reconstruction. It exerted itself to "prevent hatred succeeding defeat." It contended that to permanently re-establish peace, and to win from peace the fruits it should yield, friendly feeling must be restored between the victors and the vanquished. The pursuit of these ideas for a brief period estranged from the *TIMES* the more extreme leaders of the Republican party. Experience has vindicated the motives of the *TIMES*, and moderated the rancor of those who at the moment quarreled with it. Its desire to promote sectional reconciliation continued unabated; its good will towards the South remained unaffected by the fate that attended the overtures which it encouraged. But it has insisted that magnanimity shall be tempered with justice—that while removing disabilities and fostering paternal feeling, the essential results of the war shall be preserved unimpaired. At every stage of the controversy the *TIMES* has made partisanship subordinate to patriotism, and has interpreted in their broadest aspects the principles which underlie the Republican organization, and are the key to all that is greatest and best in its career.

The demand for party purification and administrative reform harmonizes with the declarations embodied in the first number of the *TIMES*: "What is good we desire to preserve and improve; what is evil, to exterminate or reform." The paper stands where it has always stood when our institutions were menaced by corruption and

intrigue. It never talked about terms with rascals or "Rings." It never concealed or apologized for wrong-doing in high places. It never hesitated to condemn what is evil because the perpetrators were members of the Republican party. It never recognized partisan obligations when the integrity of the government, local or national, was endangered. It never allowed party affiliations to fetter its judgment or to obstruct the discharge of its duty to the country. These are characteristics of which the *Times* may fairly boast, and they indicate more emphatically than mere promises the direction of its course in the present condition of affairs.

The *Times* was never blind to that rapidly growing demoralization of our municipal politics which culminated in the accession to power of the Tweed Ring. It followed with unsparing denunciation the outrages upon public honor which marked the administration of Mayor Wood, and it attacked persistently and vigorously the earlier evidence of a league between Judges of the Supreme Court and the spoilers of the city. In the great Erie warfare of 1868 the *Times* bore a prominent part. The shameful series of injunctions and receiverships by which corrupt judges enabled Fisk, Gould and Lane to take forcible possession of other people's property were followed by the outspoken condemnation of the *Times*. Its course at this juncture secured for it the bitter hostility of the confederate Tammany and Erie Rings. The indictment of its conductors' was openly recommended to the Grand Jury by one of the Ring Judges, and it risked both property and personal safety in its warfare on the side of honesty and judicial purity. The stupendous naturalization frauds which paved the way for a period of corruption and wholesale plunder in the State and city were exposed and denounced in the *Times*. The political despotism which obtained possession of all the avenues of justice, of legislation and of administration, and to which even the best class of New York citizens had begun to submit with a feeling of hopeless despair, found its only formidable adversary in the *Times*. During 1870 and 1871, the *Times* waged, almost single-handed, a struggle which is probably without any example in journalism. The odds against it seemed overwhelming, and the vast majority of onlookers undoubtedly believed that the paper would come out of the unequal contest with its property sacrificed and its business ruined. The brilliant success which attended that onslaught upon the most colossal system of swindling known to modern times, tended to breed forgetfulness of the discouraging prospects which attended the early stages of the struggle, and the very substantial risks which had to be faced during the period when success appeared doubtful. The *Times* was never more true to the principles on which it was founded than when it deliberately staked its very existence upon the certainty that even in the dark days of Ring domination, against all obstacles, the cause of right and justice must ultimately triumph.

In the great movement for a higher standard of official fidelity and political purity which gained so decided an impetus from the overthrow of the Tammany Ring, the *Times* has taken a leading and effective part. It occupies to-day the position of perhaps the most powerful Republican journal in the country, devoted to all that is noblest and most progressive in the policy of its party, while ready to meet with the severest condemnation all abuse of the party name for base ends or ignoble personal ambition. In American journalism there is no more consistent and honorable record than that of the New York *Times*.

#### THE TIMES BUILDING.

The first number of the *Times* was issued from No. 113 Nassau street. Although, compared with subsequent accommodations, these premises were humble, they were in favorable contrast with other newspaper offices of that day, and were in themselves sufficient to prove that pluck, enterprise and capital were at the back of the new venture. On the 1st of May, 1854, it removed to ample quarters at the corner of Nassau and Beekman streets. But its sojourn here was to be of brief duration, for the business sagacity of the owners speedily saw and took advantage of an opportunity to place the paper in one of the best locations held by any newspaper in the United States. Early in the year 1857, the property of the "Old Brick Church," consisting of the triangular plot of ground bounded by Spruce, Nassau and Beekman streets and Park Row, was put upon the market, and the *Times* was fortunate enough to secure the northern half of it. The plot it obtained was somewhat irregular in shape, being 65 feet front on what has now come to be known as Printing House Square by 105 feet on Nassau street and 100 feet on Park Row. For this site \$185,000 was paid, and on it ground was broken on the 1st of May, 1857, for the building which is still, and

will be for indefinite years to come, occupied by the paper. This building, at the time it was constructed, was far superior to any then in existence, and with all the suggestions and improvements of the last twenty years which have been embodied in recent architecture, is not now surpassed by any in the world. It is constructed of Nova Scotia stone, is five stories high and has three fronts, as it extends over the area which has just been named. It is thoroughly fire-proof throughout, which was a feat never achieved or hardly attempted at the time it was constructed. It occupies an area of 13,750 square feet and contains 38 large rooms, many of which are sub-divided by partitions for business purposes and for the uses of the newspaper. This latter occupies in the publishing, editorial and composing departments altogether 23 rooms, some of which, however, are sub-divisions, and in addition there is the press room underneath the building, which by excavation under the sidewalks has been given an area of 206 feet by 104. The entire building is fully supplied with gas, water, speaking tubes and all other appliances for the convenience of tenants, or for that of the business for which it was specially intended. As a great newspaper can only be done justice by giving particulars, it is now intended to go through this building in detail, and give a view not only of each department, but of the manner in which it is conducted.

#### THE PUBLICATION DEPARTMENT.

The rooms of this department occupy 65 feet front on Printing House Square by about the same space in depth on both Nassau street and Park Row, thus giving them, in common with all the remainder of the building used for the newspaper, three fronts. First of all is the counting room, with entrances from three streets. Oblong in shape, it gives ample space for the vast business which must every day be transacted. The counter of black walnut extends across the entire length of the room, and is surmounted at short intervals with high plate glass screens, to insure the privacy of the clerks. It is here that the general business with advertisers and subscribers is transacted, and there is no hour in the twenty-four when it does not present a busy scene, but hardly at any time does it present an appearance so animated as during those hours when the army of newspaper readers are in bed and asleep.

In the rear of the counting room is another apartment of equal size, and connected with it by three arched passages, which is divided by partitions into five compartments. First on the Park Row side is the office of the cashier, and next to him is the private room of the publisher and chief proprietor, Mr. George Jones, and next beyond is the office of Mr. Gilbert Jones. The other small rooms are used for miscellaneous purposes; one of them being devoted to the mailing bureau, which is in itself no small portion of this department, for it is here that the huge mails of the paper are so arranged and systematized that the largest possible amount of work is done downstairs in the shortest possible space of time. The labors of this bureau, and indeed of the whole force of the paper, have been greatly increased since the introduction of the fast mail. This mail leaving the post office in New York at 4 A. M., it is easy to see that a morning newspaper having any pretensions to enterprise has hard work to make time, but the *TIMES* has done it with more success than any of its contemporaries.

#### THE EDITORIAL DEPARTMENT.

Leaving the Publishing Department and going up three flights of stairs we reach the editorial rooms of the paper. Here are thirteen rooms, all but two of which are devoted to the use of the editorial staff proper, and those two to the city department. One of these two latter is used exclusively by the City Editor and his assistants, and the other and larger rooms by the reporters, who number altogether about thirty. It is their business to scour the city far and near for whatever items of interest may appear from day to day, and the fullness and excellence of the *TIMES'* local news for many years past bear witness to the intelligence and faithfulness with which these gentlemen have discharged and still are discharging their duties. On the same floor are the rooms of the editorial writers: the Exchange Editor, the Telegraphic News Editors, the Night Editor, the Dramatic Editor, the Commercial and Financial Editor, the Literary Editor, the Index Editor. The habits of business in this department are methodical, but varied according to the necessities of the numerous departments of the work of a great daily newspaper.

It is the business of a newspaper like the *TIMES* to furnish its readers every morning with every item of interest which has transpired anywhere in the world during the

previous day and night. To accomplish this end it not only needs and has a complete corps of capable editors and intelligent reporters, but a large retinue of foreign correspondents who have the tact and experience necessary to observe and correctly report all events of public interest in the localities in which they are stationed. Sometimes the news comes by mail, but if need be the telegraph is freely used. In addition to all these the *TIMES'* corps of domestic correspondents is among the largest and most efficient in the country. It has regular correspondents in Boston, Philadelphia, Chicago, Baltimore, Washington, Albany, Richmond, Wilmington, Hartford, Raleigh, Atlanta, New Orleans, Jackson, Memphis, Nashville, Knoxville, Louisville, Trenton, Harrisburg, Pittsburg, Columbus, Cincinnati, Detroit, Cleveland, St. Louis, Omaha, Denver, Salt Lake City and San Francisco, and many cities of lesser note. But this is not all, for no sooner does anything of any great public interest happen, than the *TIMES* immediately dispatches a special correspondent from the office in New York to the scene. Added to all these, the *TIMES* has an experienced corps of political correspondents, who, during times of political excitement, traverse the Union and furnish information in regard to passing events.

#### THE COMPOSING ROOM.

All the matter prepared by the staff of editors, correspondents and reporters, after undergoing requisite revision, is sent to the composing room, on the floor above, where it is put in type. Here it is only necessary to briefly mention facts in order to show the great resources and business of the establishment. There are 92 employés, which includes the night foreman, 7 assistants, a day assistant foreman, 83 compositors, and in addition there is the general foreman, making 93. To all these must be added 8 proof-readers, making a total of 101 employés on this floor. There are 68 cases at which printers work setting type, and that they are all necessary is shown by the fact that nearly 400,000 ems are set every day, and sometimes—when supplements are issued—a great deal more. The only deduction to be made from this large aggregate is that of the advertisements which stand over from day to day, and the number is comparatively small. The most of this work is done after 6 P. M. So admirably is the composing room organized that there is rarely any delay, never any disturbance, in the performance of the work. The books show that the average time at which the last "form" goes to the stereotype room is 2.37 A. M., and from this statement any one can see that there can be no idleness during these eight hours in the large, airy and well lighted apartment which constitutes the *TIMES* composing room.

#### THE STEREOTYPING ROOM.

After matter has been "set up," or put in type, the next process is to take impressions of these types on paper, and as a final result produce from stereotype plates the printed sheet with which the public is familiar. The first step is to cast stereotype plates of the several forms, for the *TIMES* does not and has not for many years printed from the types themselves. When a form is made up it is sent down in a box moved by steam power from the top floor to the basement, some 25 feet below the surface of the street, to the stereotyping room, where some layers of damp paper are laid upon it, and it is then driven twice through a machine having powerful rollers, which squeeze the paper down on the face of the type. Taken out of that, it is next placed—with its damp paper still on it—below a heavy screw-press, the sole or lower plate of which is a steam heated metal chamber. This hot chamber dries the paper rapidly, and at the same time the pressure put upon it prevents any cockling or inequality. In a short space of time the frame or page of type is drawn out from below this press and the dried paper peeled off its surface, when it forms a perfect matrix, or counterpart of the type, sufficiently deep to enable a casting to be taken from it which shall yield a page of clear-cut lettering ready for printing from. Before the casting is taken, however, this paper matrix is made absolutely dry by being placed on another hot plate. That only occupies a very brief space of time, and when it is satisfactorily finished the paper is trimmed carefully, and then placed face upward inside a semicircular mold, when its edges are fastened down by bands of iron of the thickness that the cast is meant to be. On these bands a counterpart of the mold is then let down from a small crane, and fastened so that a semicircular chamber is formed the size of the page of the newspaper, and about three-eighths of an inch deep all round. Into this a pot of molten stereotyping metal is poured by two men, the mold having first been turned on end so as to compel the metal to fill the cavity completely, and, after

resting for a moment or two till the metal has set, the inner part of the mold is removed by the crane, the paper matrix is peeled off, scarcely browned, and capable of being used again and again, and the solid cast is swung round and deposited, still adhering to the mold, in another cavity exactly the shape of that from which it was taken. Here its edges are trimmed, and the lump of metal which formed the excess at the top of the casting sawed off by a small revolving saw driven by steam. That done, the cast may be said to be complete, having merely to be dressed a little along the edges of the outer columns of letters, and along the top and between the headings of articles, and to be pared on the back to make it lie perfectly true on the cylinder in the machine, all of which is accomplished in a very few moments. The page of lettering presents the appearance of a strong, solid half-cylinder of white metal, ribbed on the inside so as to facilitate the paring off of possible inequalities, and covered on its outer face with crisp, clean, shining letters, ready at once for the press. Only four men are employed in this room, and they do their work with marvelous rapidity. Only seventeen minutes are required in any case for making a matrix, and it has been done in twelve minutes.

#### THE PRESS ROOM.

But the chief marvel of the mechanical department of the New York TIMES is in its press room, which is the most perfect in the world, containing as it does not only all the latest improvements in machinery found elsewhere, but many which are peculiar to itself. Among these is the "wetting machine," for wetting the white paper. The TIMES is printed on rolls of continuous paper without joint or break, each of which is about five miles in length and 36 inches in width, and weighs about 900 pounds net. Five of these rolls can pass through the machine and be "wet down" in an hour, being unrolled from one side and rolled up on the other with the utmost exactness. The paper being ready for the press, the presses themselves are next in order. The TIMES is printed on three Walter presses, which are capable, without being pushed, of producing 13,500 impressions each per hour, or 40,500 per hour altogether. The stereotype plates having been placed on the presses, a roll of paper containing 6,000 copies of the TIMES is put in its place at the end of each press in a moment by one man, by means of a movable section of the floor raised by a hydraulic jack. The end of the roll is put in place and the press put in motion. The paper goes upward to where the stereotype plates forming the four pages of one side of a sheet of the paper are fastened on a cylinder just large enough to take a sheet to go round it. Against that cylinder there is another, identical in size, possessing a soft surface, which presses lightly against the edge of the type, and between these the sheet passes, taking up an impression as it goes. It is then carried downward round another large cylinder covered with cloth, the "set off" on which is taken off by another cylinder in contact with it, and that again by a rubber, in a fashion that is both simple and effective. The web of paper, still running on, passes between the second type-covered roller and its counterpart, taking the impression on its other side of the remaining four pages; and that done, it runs out between two more rollers of the same circumference. The machinery is so adjusted that the knife catches the paper exactly between each sheet, and, the paper being held hard on each side, cuts it in two, all but a couple of tags near each end, which are left for the purpose of pulling the sheet on between two sets of running tapes, until it is caught by a pair of small rollers, which are driven at a greater speed than the rest of the machine. These immediately tear the sheets apart where they have been all but cut, and the tapes hurry on what is now a completely printed newspaper up an inclined plane, at the top of which they carry it down an oscillating frame which moves pendulumwise so exactly that it delivers a paper precisely at each end of its short swing on to the face of another set of running tapes, which carry it downward on their outer face by the mere force of contact as they run. Between these tapes a frame like a huge comb swings backward and forward, catching up one delivered paper at every motion and flinging it down on a board. The current of air raised by the motion of this frame suffices to hold each succeeding sheet against the tapes along which it moves. Thus, two boys and the man who attends the machine are all the manual labor required, and the manner of delivering the papers alternately on to two inclined boards ready to receive them.

Formerly these presses required several boys each to attend them, but such improvements have been made in them by Mr. Gilbert Jones since they have been in the use of the TIMES that they have become as nearly automatic as any machines

possibly can be. One man can put the roll in place, and the same man can take the printed sheets from the other side. Some boys and men are needed to carry away the printed sheets to the mailing and delivery rooms, but so little is human help required by these presses that only nineteen persons in all are employed in the press room, while formerly more than double that number were necessary. The machinery by

which all this is done is put in motion by two engines of 40 horse power each; but only one of them is generally used at a time, as it is the system of the *Times* to have duplicates of everything in the mechanical department, so that if any one piece should

break down the other is on the spot ready for immediate use. It has another precaution against any interruption, for it has a complete machine shop in its press room, and skilled mechanics constantly in attendance to make any repairs which may be wanted. But with all this machinery in a space 106 feet by 104 feet, the TIMES press room does not appear crowded, so compact and well placed is everything. Great as are the powers of the Walter presses, they only occupy a few feet of space each, and the wetting machine could be placed on the top of a dining table of ordinary size. Nor is there the griminess usually found in such places, for the TIMES has made use of every possible appliance to avoid it. The feeding of presses with ink under the old method caused a vast deal both of foulness and waste, but under the TIMES' system, by which the ink is pumped from a reservoir into each press as it is needed, not a drop is spilled. All these facts are mentioned only to show that in its mechanical department, as in all others, the paper is second to none. It is universally admitted to be the most handsome in appearance of any paper printed, and it could not have reached nor have maintained this distinction without the most perfect mechanism.

In addition to the daily issue of the TIMES, there is the semi-weekly edition, issued on Tuesdays and Fridays, and the weekly edition on Wednesday of each week, all of which have large circulations. Complete in its mechanical appliances, strong in its resources, solid in its basis, independent and honest in its editorial management, sincere and decisive in its political convictions, but not devoted to the interests of any person or clique, presenting every morning all the news of the world for the previous day in the most perfect shape, the TIMES is the embodiment of the highest standards yet attained by American journalism.

**THE NEW YORK WEEKLY TIMES.**—A paper for the Farmer, a paper for the Mechanic, a paper for the People. Will contain *Selected Editorials from the Daily TIMES, General News, Domestic and Foreign, the Proceedings of Congress and the State Legislatures, Full and Interesting Correspondence, Book Reviews, the Choicest Literary Selections, ORIGINAL STORIES BY THE MOST DISTINGUISHED WRITERS OF THE DAY.*

Its most Prominent Feature will be a COMPLETE AGRICULTURAL DEPARTMENT, with *Original Articles from Practical Farmers, Complete Weekly Market Reports, Full Reports of the American Institute Farmers' Club, Financial, Domestic Produce, Live Stock, Dry Goods and General Markets.*

In clubs of thirty, per annum, \$1.00. One copy, one year, \$2.00.

CLUB RATES: Five copies, per annum, \$7.50; ten copies, per annum, \$12.50; twenty copies, per annum, \$22.00; thirty copies, per annum, \$30.00; and one extra copy to each club.

For every club of fifty, one copy of the SEMI-WEEKLY TIMES to the getter up of the club. Postage free to subscribers.

The New York SEMI-WEEKLY TIMES is published every *Tuesday* and *Friday*, and contains all the agricultural and literary matter of the Weekly edition, and a full and careful compilation of editorial and news features of the Daily.

Terms of the SEMI-WEEKLY TIMES: One copy, one year, \$3; two copies, one year, \$5; ten copies, one year (and one extra copy free), \$25.

Subscriptions to either of our editions received for a less length of time than one year at the yearly rate.

The SEMI-WEEKLY and WEEKLY mailed one year to clergymen at the lowest rates. Postage free to subscribers.

These prices are invariable. We have no traveling agents. Remit in drafts on New York or Post Office Money Orders, if possible, and where neither of these can be procured send the money in a *registered* letter.

Terms, cash in advance. Address

THE NEW YORK TIMES,

NEW YORK CITY.

# "THE EVENING POST," NEW YORK.

ITS SEVENTY-FIFTH BIRTHDAY.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The New York EVENING POST is one of the oldest of the *great* American newspapers, and is the best evening Journal published in New York. It was established in 1801, and for more than fifty years has been under the wise editorial management of William Cullen Bryant, the honored poet and author. Under his guidance the EVENING POST has gained a reputation and an amount of influence equaled by very few American journals. Believing thoroughly in the principles of Republican government, it addresses and represents peculiarly the cultured class of our citizens, and its tone is very high. Even its advertising columns are jealously guarded against questionable or objectionable advertisements. This fastidiousness has made it a great family newspaper, and it is generally acknowledged to be the door by which access is to be gained to New York homes.

An introduction by the EVENING POST ensures an hospitable reception to any topic, charity or business. As a contemporary published in a neighboring city says: "The EVENING POST is most decidedly the one daily paper in New York that can fully claim, like the *Pall Mall Gazette*, to be conducted by gentlemen and for gentlemen."

Its Semi-Weekly and Weekly editions bear the same general character, both in the quality of their matter and their audience, although, of course, special attention is given to the Agricultural and other departments which are of peculiar interest to the country readers.

The fact that there are a larger number of really great newspapers published in the morning than in the evening gives the EVENING POST even more prominence than it could otherwise have attained.

Having gained its position, however, the publishers have wisely spared no expense to keep and advance it. The special dispatches, it is safe to assert, are more complete and are made a much greater feature in this than in any other afternoon journal published in New York, and as the most important events happen, as a rule, in the day time, and as the difference in time gives an evening journal the daily news of Europe, a reader of the EVENING POST, for instance, has spread before him in a concise form, the daily events of the whole world.

He reads this record of the day at his home when he has both the time and the inclination for its careful perusal and consideration. Thus, an evening journal has the best possible opportunity for real influence.

The same thing is true, further, in respect to all announcements made in an evening newspaper; for, being read at home and left at home, it is naturally the medium consulted by the family in regard to most of the domestic needs and the family plans. The EVENING POST is very decided in its opinions, and as it has said of itself, it "is often called upon by a sense of duty to oppose itself to the general feeling of those from whom a commercial paper always must receive its support; it never hesitates to do so. It sometimes finds a powerful member of that community occupied with projects which it deems mischievous; it puts itself in his way and frustrates his designs if possible. In this way it makes bitter enemies, who would break it down if they could; it makes also warm friends by whom it is cordially supported. Its proprietors are satisfied with its success and its expectations." It may interest foreigners to know that the EVENING POST is the American Champion of Free Trade and the rights of Foreign Authors.

Its stately building (a picture of which is reproduced on the opposite page) is thoroughly appointed for the Newspaper business, and is on the corner of the two great commercial thoroughfares of New York, Broadway and Fulton street.

On Broadway the building has a front of sixty-two feet and ten inches, and extends one hundred and three feet, six inches on Fulton street. Its height above the side-

"THE EVENING POST" BUILDING.

walk is one hundred and twenty-five feet, though the cupola is fifteen feet higher. It is divided into nine stories, but the monotony of row upon row of windows is broken by a series of pilasters, arches, and ornamental pillars on both Broadway and Fulton street. The entire outside walls are of the best quality Philadelphia pressed front bricks and the trimmings of Dorchester stone.

# THE NEW YORK EVENING EXPRESS.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

THE NEW YORK EXPRESS was established as a daily morning journal in 1836, when the city commenced at the battery and ended at Niblo's Garden, on the corner of Prince street and Broadway. The up-town omnibuses then went no further, and Union Square was in the fields, and the head-quarters of the Manhattan Works, which supplied the city through wooden pipes with water, was in Chambers street. Of the morning papers then in existence only two survive, and of the evening only two, except the EXPRESS. All other daily journals have since disappeared, to the number of over one hundred.

The EXPRESS was started by the late JAMES BROOKS, with ROBERT E. HUDSON as Commercial Editor, and ERASTUS BROOKS as part owner and its Washington Editor, a post which he occupied during the sessions of Congress for nearly twenty consecutive years. Mr. James Brooks had occupied the same field years before, as editor of the *Portland Advertiser*, writing letters from thence, and both earlier and later from the South and Europe. He was among the earliest of the Washington correspondents, though not before Messrs. Coleman, Kingman and Mathew L. Davis, and perhaps some others. Mr. Brooks, senior, entered upon his editorial career in this city in June, 1836. Some years later the old *New York Advertiser* (Theo. Dwight and Wm. B. Townsend, proprietors), was merged in the NEW YORK EXPRESS, and the two papers were for over fifty years the corporation journal of the city, with pay at not over \$250 a year for the honor of doing the work.

The EXPRESS was the first daily double sheet printed in the city, and as an experiment it failed to attract public interest, for the reason that the advertisements could not be found, and the MORNING EXPRESS, then nearly as large as the London Times, was pronounced too cumbersome. In most parts of the country the old folio form of the present EXPRESS is still the favorite with the public. In March, 1876, the NEW YORK EXPRESS was formed into a joint stock company, Erastus Brooks and James Wilton Brooks, only son of James Brooks, consenting to part with one-fifth of their interest, and to expend the new capital in the improvement of their paper. Since then its editorial and reportorial corps have been greatly increased, with large additions to its expenses and a corresponding increase in its business income.

Since 1836, the EXPRESS has occupied the old Tontine Buildings, at the corner of Wall and Water streets, the offices at the present, 112 and 114 Broadway, the corner of Wall and Nassau streets, opposite the Custom House, the narrow front and wider rear

on Tryon Row, where the *EVENING EXPRESS* was started, 13 and 15 Park Row, where it was burned out in December, 1872, and for three years in its present premises, No. 23 Park Row, bought and built by J. & E. Brooks, and entirely adapted to its present large business, with its press-room far down in terra firma, and its editorial and composing rooms among the best ventilated and lightest rooms in the city. The premises extend from Park Row, opposite the Post Office, to Theatre Alley, with ample light and room to assure the health and comfort of all occupants in its seven stories.

#### THE SITE OF THE EXPRESS BUILDING.

Perhaps there is no plot of ground in the city that has a more memorable history than that on which the *EXPRESS* Building stands. Its early associations, like the principles disseminated from the structure, embraced the whole country. One hundred years ago it intersected the old "Commons" that stretched from St. Paul's to a cemetery that skirted the northwest line of Chambers Street. Beyond this point were the Collect or Great Pond, on which the Tombs was built; the "Tea Water Pump," in Chatham Street; "Gallows Hill," whose scaffold drank the blood of a member of Washington's Body Guard, who had sold his plans to the enemy, and the barracks and jails that stretched from the eastern section of the City Hall Park to Tryon Row and Centre Street. Farm houses, miles apart; wheat fields and orchards, relieved by small villages, such as Richmond Hill, in the neighborhood of Varick and Charlton Streets, and Greenwich (now Christopher Street) completed the scene. The "Commons," as all the ancient records inform us, was the scene of many an encounter between the "Liberty Boys" and the British loyalists, in 1775. The former fought for the principles of constitutional liberty, and for a government of and by the people; and the *EXPRESS*, on the self-same ground, is fighting the self-same battles over again, though happily with no effusion of blood.

Other associations connected with the site of the new *EXPRESS* Building also make it an object of public interest. Here was the old Park Theatre, with the row of ancient and uneven buildings which formed the block forty years ago, and it must necessarily share in all the histrionic glories of that ancient Thespian temple. Forrest, Placide, Charles Kean, Ellen Tree, Barrett (Gentleman George), Mme. Vestris, Charlotte Cushman, Vache, Fisher, Macready, Cooke, Blake, Peter Richings, and a host of other stars performed within its walls, "drawing crowded houses nightly." Opera, comedy, tragedy, burlesque, extravaganza, farce—succeeded each other. In those days, as now, play-going gallants espoused the cause of each attractive actress whom unsympathetic critics would place among less favored sisters in a stock company. On one occasion this theatre was the scene of a terrible row between the defenders and assailants of Mrs. John Wood, who was then playing a brief engagement within its walls. The gallant James Watson Webb attacked the lady's personations of several characters in his paper, the old *Courier* and *Enquirer*, and when she appeared on the stage the same evening, she was received by a storm of alternate applause and hisses, which was succeeded by a general melee, in which the house was practically converted into a prize-ring. The police finally separated the combatants.

On either side of the Park Theatre stood two memorable saloons. The first was kept by Jas. Sweeny, the father of Peter B. Sweeny, now in Paris, and James M. Sweeny, his brother, who recently died there. Both Peter B. and James M. were born in that house. The second saloon was owned by one Conroy, a brother-in-law of a "host" well known and respected in those days, named Malachi Fallon, who subsequently founded a cosy restaurant and social meeting-house in Elm street, which was known by the familiar name of "The Ivy Green."

We might multiply these by-gone scenes and incidents which give the site of the *EXPRESS* and those immediately connected with it a bright and varied page in our local history. In the cause of American liberty the place where the United States played an active part against the Georges of England, and for George Washington, of the American Colonies, the same good work is ours now, and with as brilliant prospects of success before the country, we trust, as when the old liberty boys met to defend the right at the mouth of the cannon. The weapon now used is the pen, which ought to be mightier than the sword, but which now is too often, we fear, used to pull down rather than build up the Republic.

# THE BROOKLYN "EAGLE."

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

THE "EAGLE" BUILDINGS.

## THE ESTABLISHMENT OF THE BROOKLYN EAGLE.

THE BROOKLYN EAGLE is in an especial sense the journalistic representative of the city in which it is published, and it is published in the third city in the Union, in point of population, and the second in extent of area. The growth of Brooklyn has been marvelous among even American cities. The BROOKLYN DAILY EAGLE was founded in 1842 by Isaac Van Anden, who took an active interest in its business management up to the period of his death in 1875. Brooklyn, at the time the EAGLE was started, had been incorporated as a city but about seven years, and it then contained a population of only 30,000. Its population is now over 500,000. The EAGLE has steadily grown with the city, until it is now the most widely circulated evening journal published in this country. Its early contemporaries and rivals have all passed away, and, while there are three other daily papers published in Brooklyn at the present time, the newspaper business of the city may be said to be concentrated in the office of the EAGLE. Designed mainly to meet the wants of a concentrated population of half a million, it is exceptional among newspapers in the compactness and universality of its circulation within the sphere of its direct influence, so that it has long ago come to be accepted as a truism in Brooklyn that, "Everybody who can read at all, reads the EAGLE." As a medium of advertising, in order to reach the people of Brooklyn, it has no rival. The extent of its advertising patronage is exceeded by only one morning newspaper in New York, and by no evening paper in the world. Its circulation is believed to be larger than that of all the evening journals, of its class, published in New York, and is exceeded but by two or three of the Metropolitan morning newspapers, which, while they may have sharper competition, have a more extensive constituency. The circulation of the EAGLE has more than kept pace with the growth of Brooklyn. It is also sold at the principal centres of resort in New York; has a considerable and growing mail circulation, and is recognized throughout the country as one of its most influential and prosperous journals. In proportion to its circulation, the EAGLE is believed to be the cheapest advertising medium in either city. The income of the paper has grown to be very large, but in presenting not only the news of the world, but the most minute reflex of the daily life of Brooklyn, its expenditure has come to be so vast that rivalry with it has been found to be impossible.

## HOW THE EAGLE BUILDINGS ARE OCCUPIED.

The EAGLE is issued from the extensive printing establishment known as Nos. 34, 36 and 38 Fulton street. These buildings extend to the adjoining street, and have been fitted up with the especial view of accommodating its business, and that of the very extensive Book and Job Printing office embraced in the establishment. These buildings are four stories in height, and are occupied as follows:

On the basement floor are the newspaper folding rooms, and the rooms for the clerks engaged in selling tickets, which are in turn passed to the folders, who count off the EAGLE with a rapidity perfectly incomprehensible to those who have not seen the quickness of the eye tested as an enumerator. At certain hours of the day the front room is given over to bustle and excitement—and to the newsdealers and "newsboys" who impatiently await their turn to get their papers—each one eager to be first on the street with a newspaper which everybody in Brooklyn reads.

On the first floor are the counting rooms, telegraph office, newspaper-file room, and private rooms of the business heads of the concern. In the counting rooms there is a "Gold and Stock Indicator," which records during business hours of the day all the operations of Wall street, ship arrivals and departures, and the principal news items of the day. The counting room is one of the most frequented centres of Brooklyn, and is usually crowded with people having business with the office. Nearly level with the first floor is a building especially constructed for the accommodation of the two eight-cylinder Hoe Lightning Presses, which can be seen from the counting rooms, from morning until late into the afternoon, and often into the night, throwing off the various editions of the EAGLE, at the rate of thirty-six thousand per hour. The EAGLE is now stereotyped, and hence its "forms" can be printed at the same time on

both presses. The **EAGLE** is the only evening newspaper in the country printed on the Hoe Lightning Presses, which is under the necessity of duplicating its forms by stereotyping. The rear building, fronting on Doughty street, is occupied by the numerous presses required by the Job Office Department.

The second floor is devoted exclusively to the business of the Book and Job offices. Several weekly newspapers are printed here, and every description of work is turned out in large quantities.

The third floor—Very nearly one-half of this floor is devoted to the use of the editorial and reportorial staff employed upon the paper. Seven rooms, running along the Fulton street side of the building, are occupied by the editors, while two spacious apartments are devoted to the use of the very large staff of reporters employed on the paper. Adjoining are rooms reserved for the proof readers, etc. The rear half of this floor is occupied by the compositors, who "set up" the paper. This room is believed to be one of the best arranged and best ventilated composing rooms in the country. It is lighted from the roof and from the windows which look out from three sides of it.

On the fourth floor are the rooms occupied by the stereotypers. It also contains the bookbindery, the ruling, the folding, and the drying rooms, and other apartments needed in the conduct of the job office.

#### POLITICAL VIEWS.

The **BROOKLYN EAGLE** has long ago repudiated such distinction as is to be secured by mere party organship. In its reportorial columns equal favor is shown to all, the main object of the paper being to daguerreotype life in Brooklyn, with perfect impartiality and accuracy. The **EAGLE** has consistently advocated and upheld those principles of government with which the name of Thomas Jefferson will be associated as long as our Federal system of Republican government continues to exist. Entirely independent of party, it is enabled to maintain a tone of courtesy, candor and independence in its editorial columns, which commends it alike to the honest masses of both parties.

#### BUSINESS MANAGEMENT.

The **BROOKLYN EAGLE** has been published for several years past by an incorporated association. Its stock, however, is concentrated in very few hands. Outside of the family of its founder, Mr. Van Anden, there are but three stockholders—one of them the gentleman who has filled for many years the position of editor-in-chief of the paper. William C. Kingsley and Abner C. Keeney, very well known citizens of Brooklyn, are the only other stockholders. The business interest of the **EAGLE** is represented by Mr. William Hester, nephew of its founder, Mr. Van Anden.

#### THE EDITOR-IN-CHIEF.

In the formation of political and public sentiment, the **EAGLE** takes a leading place in the ranks of American newspapers. Its editorial conduct is under the full control of Mr. Thomas Kinsella, who has grown up with the paper, having served it in nearly every capacity—compositor, contributor, reporter, assistant editor, and editor-in-chief. Mr. Kinsella takes an active part in the public affairs of his city and State. He has held various offices of trust under the local government of Brooklyn. In 1864 he was a member of the Democratic National convention; in 1866 he was a delegate to the Union Convention, held in Philadelphia, to sustain President Johnson's administration; in 1872, as a zealous advocate of the election of the then head of his profession—Horace Greeley—to the Presidency of the United States, he presided over the Rochester Democratic State convention, and was one of the delegates to the National Democratic convention, which was held at Baltimore, and through whose action Greeley secured the support of the Democratic party. Mr. Kinsella was a member of the House of Representatives during the Forty-second Congress.

#### SECRETS OF SUCCESS.

The marvelous success of the **BROOKLYN EAGLE** is due in part to the fact that it has identified itself in all things with Brooklyn and her people, but mainly to this: It is run as a newspaper, and finds its own interest in upholding that of the great public, whose favor alone insures journalistic success.

# THE "SCIENTIFIC AMERICAN."

THEN AND NOW.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

It was in the year 1845 that the first number of that popular illustrated newspaper, THE SCIENTIFIC AMERICAN, was issued to the public, its circulation for the first few months averaging barely 300 copies per week; and it was then the

only scientific and mechanical journal in the United States. Now, in the centennial year, 1876, 50,000 copies hardly suffice the weekly demand, this number being largely in excess of the combined circulation of all the other papers of its class published on this continent.

In the 31 years thus passed, the history of this well known weekly paper is contemporaneous with and largely illustrates the astonishing progress of this country in the mechanical arts and in industrial science; and it is with feelings of satisfaction that the proprietors refer to the public sentiment which universally prevails: that THE SCIENTIFIC AMERICAN has done more to foster improvements and promote the progress of invention and the mechanical arts in this country during the last quarter of a century than all other publications; and although the publishers continue to regard the promulgation of practical information, on the industrial arts and mechanical progress generally, as the legitimate aim of the paper, they are glad to know that their paper is a welcome guest in the home and at the fireside, as well as in the library, workshop, and laboratory. To fulfil all these requirements, a journal must record all the discoveries in the arts at home and abroad, report all important patents as fast as they are issued, and leave nothing that pertains to the prosperity of the manufacturer or the comfort of the home unnoticed. With pride the publishers refer the reading public to the past volumes of their journal, to be found in the most important libraries at home and abroad, where they are constantly referred to for data in all matters pertaining to discoveries and inventions.

The large subscription list and sale of the SCIENTIFIC AMERICAN enables its proprietors to give out weekly the handsomest and most useful illustrated periodical extant. It is one of the most popular weekly journals in the world, and

the cheapest periodical devoted to science, art, mechanics, and all their branches now published in either hemisphere. For engravings of mechanical subjects, the SCIENTIFIC AMERICAN has always stood at the head of all publications of its kind in the world, and the same artist who won a name for himself for the good quality of his engravings on this paper a quarter of a century ago, still executes the superb cuts which now grace its pages; and for the superiority of such work, none has ever excelled him. The cost for a good engraving and its publication in the editorial column is but trifling compared with the benefit derived, if one wishes to negotiate sales of territorial rights, or the manufactured article. The advantage of placing a picture and description of a new invention before the eyes of fifty thousand persons, most of which are of the class interested in new discoveries and new devices, cannot fail of attracting the attention of all of this vast number, and of being of special interest to some. The receipt of a model, photograph, good drawing, or a copy of the Letters Patent, is sufficient to estimate the cost for engraving, and we would recommend parties to this course in advance of giving the order for the execution of the work.

There is not a country or a large city on the face of the globe where the paper does not circulate. We have the best authority for stating that some of the largest orders for machinery and patented articles from abroad have come to our manufacturers through the medium of the SCIENTIFIC AMERICAN, the parties ordering having seen the article illustrated or advertised in these columns. Small models, as well as photographs and drawings, may be sent by mail.

Messrs. Munn & Co., finding that their endeavors were so widely appreciated by the public, commenced on January 1, 1876, the publication of an additional paper, entitled the SCIENTIFIC AMERICAN SUPPLEMENT. The success of the new enterprise was ensured as soon as the first number was issued; and within three months of its first appearance, it attained a circulation of 15,000 copies weekly, making it, with the single exception of the SCIENTIFIC AMERICAN, the most widely spread and valuable advertising medium in the country. It is, like the SCIENTIFIC AMERICAN, illustrated with a constant succession of excellent engravings of new engineering enterprises and mechanical subjects.

In 1846 Messrs. Munn & Co. established, in connection with the publication of the SCIENTIFIC AMERICAN, the business of soliciting patents, and soon afterwards established branch offices at Washington, London, Paris, Brussels, and Vienna. In the past thirty years this concern has grown till it has become the largest patent-soliciting establishment in the world, having been honored with the confidence of more than 60,000 clients, and prosecuted to a successful issue no less than 40,000 applications for letters patent in this and other countries. This vast number is not much less than one fourth of the whole patent business of the United States, and has been acquired by lengthened experience and unrivaled facilities for transacting all business connected with patents and the Patent Office. The principal or home office in which this large amount of business is conducted is represented in the engraving at the commencement of this article; and the large number of experts constantly employed have been selected mostly from the ranks of the Patent Office at Washington, and they comprise men of unusual ability for the execution of the duties of their peculiar profession. Inventors who visit this great establishment, or communicate their inventions by writing, will find that the best professional advice and instructions are freely given, and that all such communications are kept strictly confidential. Daily access to the records of the Patent Office, through the branch office of the SCIENTIFIC AMERICAN in Washington, renders it possible for Munn & Co. to conduct their immense business of soliciting patents in the United States and all foreign countries in the quickest, cheapest, and most satisfactory manner. The principal office of the SCIENTIFIC AMERICAN and the patent department is located at 37 Park Row, New York City.

# THE NEW YORK LEDGER.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

It was in the latter part of the year 1854 that ROBERT BONNER set himself the task of making the NEW YORK LEDGER the best and the best-known family paper in America. Mr. BONNER was then thirty years old, and had already had several years' experience as a publisher and an editor. He did not enter upon his new undertaking without much and well-considered deliberation. He possessed unusual advantages for the enterprise. He was not only an experienced publisher and editor, but he was also a practical printer, and a thorough master of his business in every department and phase of it.

LEDGER BUILDING.

During the year 1855 Mr. BONNER got his plans well in hand, and though limited in means, he accomplished most gratifying results. The sale of the LEDGER ran rapidly up to a high figure, and the profits soon became large. But

Mr. BONNER was not content with a measure of success that might have satisfied an ordinary ambition. He turned his profits into his business, and pushed the LEDGER with unexampled enterprise and liberality. He, and his paper, and his energy, and his novel modes of procedure became matters of general public discussion.

The circulation of the LEDGER continued to increase, and before the close of the year 1836 it far exceeded two hundred thousand copies a week. From that time it has constantly grown in prosperity, in reputation, and in power, until, in its commanding influence, in the extent and character of its circulation, and in the vastness of the fortune which it has yielded to its proprietor, the NEW YORK LEDGER has become the most successful literary and family paper of which we have any knowledge. Its circulation at times has reached over three hundred and fifty thousand copies.

In truth, the success of the LEDGER is looked upon as one of those marvels of the times which nobody expects to comprehend. The general impression is that the LEDGER has been pushed with almost superhuman energy, and conducted with almost superhuman sagacity; but of course the public at large cannot be expected to understand or even to remember just what this energy and sagacity have done, or how they have done it. It is doubtful even if the most assiduous readers of the LEDGER for the last twenty years could name a tenth of the illustrious statesmen, editors, educationists, divines, scholars, essayists and poets who have in that time written for it.

We must confess that until we recently examined the files of the LEDGER we ourselves had no idea what an astounding list of contributors it has had. We cannot give the names of all these contributors—it would be too much like publishing a dictionary of authors; but must content ourselves with mentioning some of the more eminent ones.

Prominent among the names of statesmen who have written for the LEDGER are those of Edward Everett, James Buchanan, President of the United States; Henry Wilson, Vice-President of the United States; George Bancroft, and General N. P. Banks. Also, United States Senators Anthony and Sprague of Rhode Island, Edmunds of Vermont, Ferry of Connecticut, Stockton of New Jersey, Sherman of Ohio, Morton of Indiana, and Cameron of Pennsylvania.

Many of the greatest journalists we have ever had in America have been contributors to the LEDGER; among others, James Gordon Bennett (senior), Horace Greeley, Henry J. Raymond, George Ripley, Charles A. Dana, and George D. Prentice and William Cullen Bryant, also eminent as poets as well as distinguished as editors. In addition to these, in the list of poets, we find the names of N. P. Willis, George P. Morris, Mrs. Sigourney, Phebe Cary, Alice Cary, Emma Alice Brown, Ethel Lynn, Nathan D. Urner, John G. Saxe, Henry W. Longfellow and Alfred Tennyson.

On the list of prose contributors to the LEDGER we find the names of Charles Dickens, Fred. S. Cozzens, Paul Morphy, James Parton, Fanny Fern, Mrs. Horace Greeley, Mrs. Southworth, Mrs. Harriet Lewis, Miss Eliza A. Dupuy, Mary Kyle Dallas, Sylvanus Cobb, Jr., Leon Lewis, Prof. William Henry Peck, Judge Clark, Miss L. M. Alcott, Mrs. Elizabeth Blackwell, Lydia Maria Child, Mrs. Horace Mann, Mrs. N. P. Willis, Madame Le Vert, Mrs. General Banks, Mrs. President Barnard, Mrs. Howard Crosby, Mrs. Chancellor Ferris and Mrs. Jessie Benton Fremont.

The presidents of many of the leading colleges in America have also been contributors to the columns of the LEDGER. Among these eminent scholars were Rev. Thomas Hill, D.D., LL. D., President of Harvard College; Rev. Theodore D. Woolsey, D.D., President of Yale College; Rev. John Maclean, D.D., President of the College of New Jersey; Rev. D. R. Goodwin, D.D., President of the University of Pennsylvania; Rev. Asa D. Smith, D.D., President of Dartmouth College; Rev. W. A. Stearns, D.D., President of Amherst College; Rev. Mark Hopkins, D.D., LL. D., President of Williams College; Rev. Laurens P. Hickok, D.D., LL. D., President of Union College; Rev. E. O. Haven, D.D., LL. D., President of the University of Michigan; Rev. Joseph Cummings, D.D., LL. D., President of the Wesleyan University; Rev. S. G. Brown, D.D., President of Hamilton College, and Rev. M. B. Anderson, LL. D., President of the University of Rochester.

In addition to these eminent scholars and divines, we also find the following

names on the list of writers for the LEDGER: Rev. Stephen H. Tyng, D.D., Rev. Francis Vinton, D.D., Rev. Edward Everett Hale, Rev. J. Hyatt Smith, Rev. Tryon Edwards, D.D., Rev. John McClintock, D.D., Rev. Thomas Armitage, D.D., Rev. Samuel Osgood, D.D., Rev. Thomas H. Skinner, D.D., Rev. Leonard Bacon, D.D., Rev. Howard Crosby, D.D., Bishop Simpson of the Methodist Episcopal Church, Rev. J. Williams, D.D., LL. D., Bishop of Connecticut, Rev. John Hall, D.D., of New York, and Rev. Thomas M. Clark, D.D., LL. D., Bishop of Rhode Island.

What other paper can show such a list of illustrious contributors? History, biography, statesmanship, theology, poetry, art, science, philosophy, literature, and whatever relates to the educational interests and the social and domestic well-being of the people, have their representatives and advocates here. If we properly grasp this great fact it will enable us to get some notion of the means by which the LEDGER has gained the commanding position which it now holds. It always has the largest number of great and distinguished contributors writing for it. It appeals to and gratifies every wholesome literary and educational taste. It is always a *live* paper, and perpetually keeps pace with the genius and spirit of American progress. It contains the purest, sweetest and most delightful stories, striking narratives and instructive biographical and historical sketches; also, a popular and carefully-prepared collection of scientific facts, forming a weekly register of the latest scientific discoveries.

All kinds of questions which interest the great family of man are also answered in the columns of the LEDGER; and a great amount of information on matters of law, business, marriage, love, housekeeping, the relations of friends, personal differences, etiquette, plans of life, &c., is thus communicated.

As the LEDGER is largely the oracle of the young people of the country, one of its great guiding principles is to inculcate the sentiments of self-respect and self-reliance in its readers, and thus to strengthen and render more manly the characters which are just assuming form, to endure through all their days. Thus, while the LEDGER is read with the warmest and most intense interest by hundreds of thousands of persons, it is doing much to inculcate sound principles wherever it goes, and to make better men and women of the rising generation. This is one reason why the LEDGER is such a general favorite, and why the educationists of the country like to write for it. A College President, or a Doctor of Divinity, who addresses the public through the columns of the LEDGER reaches every city, town, village and hamlet in the United States, and speaks to hundreds of thousands of intelligent people.

One of the most striking facts in connection with the LEDGER is the continuous vitality of Mr. BONNER's personal energy and business enterprise. He is as wide awake now as he was twenty years ago. He is always on the alert for any new feature that he thinks will render his paper more useful and attractive, and he never allows the cost to stand in the way of his securing a good thing for the LEDGER.

The grand result of all this enterprise and sagacity—of this vast array of eminent and popular contributors—of these deep, pure streams of literature which have been flowing through the columns of the LEDGER for so many years—is, that the popularity of the NEW YORK LEDGER is now unbounded; its circulation covers the whole land; the young, the middle-aged, and the old, the rich and the poor, the learned and the unlearned alike find entertainment and instruction in its pages; it enlivens and brightens thousands upon thousands of homes; it is firmly fixed in the confidence and the affection of the American people, and its influence—which is always on the side of virtue, morality and religion—is immeasurable.

# "THE EVENING NEWS," DETROIT, MICH.

## A GREAT JOURNALISTIC SUCCESS IN THE WEST.

### A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

For several years Mr. James E. Scripps, then manager of the *Detroit Tribune*, had entertained a growing conviction that a cheap, popular newspaper, somewhat similar to the *Boston Herald*, the *New York Sun*, and the *Philadelphia Public Ledger*, might be made as great a success in the West as in the Eastern cities, although all attempts of the kind had previously proven failures. From a long practical acquaintance with journalism, and an attentive study of it as a science, he believed that the rocks and shoals upon which so many newspapers had been wrecked might be avoided, and publishing be made as safe and certain as any other business enterprise. It was in pursuance of this theory that, on August 23, 1873, THE EVENING NEWS was launched in Detroit, the chief city of Michigan. The new venture was thoroughly advertised beforehand, an able corps of assistants was secured, embracing the very best men that could be had, and a four cylinder Hoe press was purchased, with a capacity of 10,000 copies per hour. Within five months THE EVENING NEWS had reached a paying basis, and was printing regularly over 5,000 copies each afternoon. By the close of its first year its circulation exceeded 10,000 copies; its second year closed with a regular average issue of 17,025 copies, and by May 1, 1876, it had risen to over 18,000 copies each day. The success of THE EVENING NEWS is owing to several causes.

1st. The paper is cheap and readily within the reach of the masses, being sold to the public at two cents per copy, or at fifty cents per month.

2d. It is of such a size (22x32 inches) that it is kept constantly crowded, either with advertising at good, fair prices, or with choice reading matter—nothing dull, prosy or carelessly prepared being permitted in its columns.

3d. It has a large staff of capable writers, and aims to maintain as high a standard of excellence in the character of work done upon it as any newspaper in the country.

4th. It is independent in all things, and neither fears a foe nor shields a friend.

5th. It is emphatically a newspaper, and is looked to by the people of Michigan both for the *earliest* tidings of current events and the *most trustworthy* accounts of them.

Between 7,000 and 8,000 copies are circulated throughout the State of Michigan, while the remainder are taken in and around the city of Detroit, which, with its suburbs, exceeds 150,000 inhabitants.

What the *Herald* is to Massachusetts, the *Sun* to New York, and the *Public Ledger* to Pennsylvania, THE EVENING NEWS is to the prosperous and growing State of Michigan, and the border counties of Ohio, Indiana and Ontario.

The actual number of papers printed and sold in the first year of THE EVENING NEWS history was 2,063,950. In the second year the number rose to 4,097,463, and for the first eight months of the third year to 3,489,190, indicating a total for the full year (which does not close till August 23.1) of 5,223,785.

THE EVENING NEWS is one of the very few newspapers in the United States which can afford to publish from week to week its exact circulation. This it has conscientiously done from the first.

# "THE MORNING NEWS," SAVANNAH, GA.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

In point of rapid growth and prosperity, the ranking paper of the Southern States is the Savannah (Ga.) MORNING NEWS, of which Mr. J. H. Estill is proprietor. He has just moved into a new building of his own, which, in its finish and appointments, has no equal in any of the more Southern States, and is the first building of the kind south of Maryland and Kentucky.

Its erection was commenced on the 6th of July, 1875, and its occupation took place on the 15th of January, 1876, the 26th anniversary of the paper. It presents an attractive and imposing exterior, is four stories on a basement, with neat front of Georgia granite, and from the street to the top of the cupola is eighty-eight feet high. The arrangements of the building are admirable, and afford ample facilities for the various departments of the newspaper publication office,

the extensive job printing establishment, and the blank book manufactory and bindery. Communication is had with the various floors by means of speaking tubes, dumb waiters and one of Bates' patent elevators; and the entire building is supplied with all the modern conveniences and comforts, with thorough ventilation and protection against fire, and, in brief, is a model newspaper edifice, an ornament

"NEWS" BUILDING.

to the city, and a practical evidence of the prosperity of the influential and able journal whose home it is.

From a little bantling, one-third its present size, the MORNING NEWS launched upon the uncertain seas of journalism in 1850, with three formidable competitors already occupying the field, and at a time when public feeling ran high in consequence of the diversity of interests and political

opinions in the South, by its persistent and fearless advocacy of constitutional liberty, steadily progressed in the good will of the community. During the first decade of its existence it had written the obituaries of two of its original competitors and four subsequent journalistic rivals, and at the commencement of the war, the MORNING NEWS and the old *Republican* were in sole possession of the field, and were undisturbed during the continuance of the struggle.

The career of the MORNING NEWS during the war was similar to that of most papers in Southern cities, with the difference that it never suspended, save for a few days, consequent upon the occupation of the city by the Federal forces.

From that time until 1867, when the present proprietor took charge, the MORNING NEWS had a very precarious existence. From that period onward, however, there was a marked change in the paper; energy, good management, with the expenditure of every dollar that could be spared, soon placed the MORNING NEWS far in advance of its contemporaries, several new papers having been started after the close of the war. One by one these journalistic enterprises

drooped and died, and in the summer of 1875, the **MORNING NEWS**, by absorbing the *Advertiser*, became the only daily paper in Savannah, and is so to this day, with little prospect of having any competition, as the experiences of the past ten years have demonstrated the fact that in the South, where there is almost entire unanimity of political views among the whites, one live, progressive journal fills the public demand. Such a journal is the **MORNING NEWS**, the acknowledged head of the Georgia press, from its large circulation and great influence.

Particular attention is given to Georgia and Florida affairs, as also to South Carolina news, in which States the **NEWS** circulates largely, especially in Florida, where its circulation almost equals the combined circulation of the entire press of the State. Hence, to those desirous of obtaining correct information in regard to Southwest Georgia and Florida, the **MORNING NEWS** is invaluable. In all its departments the paper is fully up with the spirit of the age, and is a credit to Southern journalism.

The **NEWS**, however, does not confine its efforts to the section in which it is published, but stands prominent among Southern journals as a first-class medium for general intelligence, and as a bold and fearless exponent of the principles of the democratic party. It publishes three editions—a daily, tri-weekly and weekly.

The rank which the **News** has attained among the newspapers of the South is somewhat remarkable when it is taken into consideration that Savannah was outranked by a number of other cities in population before the war.

# "THE NEW YORK WEEKLY."

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The NEW YORK WEEKLY, which is universally recognized as "the greatest story and sketch paper of the age," came into the possession of its present proprietors, Messrs. STREET & SMITH, in March, 1859. At that time its circulation was about 28,000 copies, and outside of the metropolis it was little known. Now the name of the NEW YORK WEEKLY has a familiar ring in every habitation within the boundaries of American civilization. Its constituency is numbered by millions, and its circulation is greater than that of any other paper in the world.

The remarkable prosperity of the NEW YORK WEEKLY cannot be attributed to chance or luck. The tact, judgment, industry and enterprise of STREET & SMITH have commanded success where men of less pluck and energy would have ingloriously failed.

Many publishers who have tried the experiment are aware that it is no child's play to compete with the numerous literary papers now established. But the NEW YORK WEEKLY, in its competition for popular favor, long since stepped far in advance of all opposition, and is now considered the leading literary paper in the world.

## "THE NEW YORK WEEKLY" ESTABLISHMENT.

A brief reference to the NEW YORK WEEKLY establishment, with a description of its various departments, may prove interesting to the reader. The NEW YORK WEEKLY buildings are located at Nos. 27, 29 & 31 ROSE STREET, within sight of the City Hall and the Post-office.

## THE PUBLICATION OFFICE.

The private offices of Messrs. STREET & SMITH and the publication department are on the second story of No. 31. The office of Mr. FRANCIS S. STREET fronts on Rose street; and here the contributors and visitors who call for the first time are amazed on beholding piles of unpublished manuscripts, some in safes and some on shelves.

The aggregate value of manuscripts now on hand, we have learned, is over two hundred thousand dollars. Fancy for a moment the anxiety with which these manuscripts are contemplated by the hundreds of writers whose busy brains and nimble fingers produced them. For years many of the authors have impatiently awaited the appearance of their works in print, and with keen eyes scanned each number of the NEW YORK WEEKLY, with the hope of finding the announcement that at last a definite day has been named for the appearance of the story which, it is hoped, is to bring fame, and consequently fortune, to the author.

At the rear of the second floor is the sanctum of Mr. FRANCIS S. SMITH, which is tastefully decorated with paintings of a high order of merit. Here Mr. SMITH's pleasant face may be seen in a cloud of blue smoke, for he is an inveterate smoker, and seems to derive poetic inspiration from a cigar. Here the voluminous correspondence received each day is glanced over by Mr. SMITH after the business letters have been selected therefrom by Mr. STREET, who is the business manager and attends to all the financial matters. Mr. SMITH devotes his attention exclusively to the literary management of the paper, and while each partner is in a measure independent in his own sphere, perfect harmony prevails.

The Publication Department is between the two offices just mentioned. The

cashier and the receiving and mail clerks occupy this portion of the building. The sides of the room are faced with boxes containing *back numbers* of the **NEW YORK WEEKLY**, for which there is a constant demand.

#### THE MAILING ROOM.

The mailing room is on the second floor of No. 29. Numerous clerks are here kept busy putting the names of new subscribers in the mail books, writing wrappers, and preparing for the post-office the immense edition which each week is forwarded to mail subscribers.

#### EDITORIAL ROOMS.

The editorial rooms are directly over the publication department. On one side of the room is the library—a collection of useful works of reference. The great variety of information supplied by this library may be inferred by glancing over the correspondence column of the **NEW YORK WEEKLY**. Authors cannot object to our terming the editorial department “the council chamber of a literary grand jury.” Here a jury of four experienced journalists sit in judgment upon the various manuscripts received. Upon their decision rests the hopes and fears of thousands of writers who have sought the **NEW YORK WEEKLY** as a medium to spread their productions broadcast throughout the land.

#### THE ENGRAVING DEPARTMENT.

The engraving department is on the same floor with the editorial rooms. The blocks from which the illustrations are printed are here engraved by a corps of competent artists. The subjects for illustration are usually selected by the editors, but sometimes by the draughtsmen.

#### THE COMPOSITION ROOM.

The composition room is on the fourth floor, over the editorial rooms. Here are arranged in proper order the multitudinous types which each week impart to the world instruction, entertainment, and amusement. Here the interesting stories, the suggestive essays, the stirring poems, and mirth-arousing anecdotes are converted from manuscripts, letter by letter, and word by word, into square “forms” of type, ready for the electrotypewriter. So large is the circulation of the **NEW YORK WEEKLY** that nine sets of plates are taken by the electrotypewriter. These duplicates are absolutely necessary, as nine presses, working night and day, are required to print the immense edition of the **NEW YORK WEEKLY**.

#### THE PRESS-ROOM.

The press-room is in the building No. 27 Rose street. In this department the nine presses, moved by an engine of 160 horse-power, may be seen at work, night and day, throwing off the printed sheets, ready for the counter, who counts and arranges the papers in bundles of fifty. One man is constantly employed counting the **NEW YORK WEEKLY**, and performs no other duty, his entire time being occupied in this work. When the edition is all printed, it is conveyed in wagons to the establishment of the American News Company, the wholesale agents, by whom it is distributed to the various retail agents throughout the country.

The **BOYS OF THE WORLD**, a paper intended for the instruction and entertainment of the rising generation, is also published by **STREET & SMITH**. This paper, although but seven months established, has a circulation of over 60,000 copies, and is greatly admired by the young folks.

The **MAMMOTH MONTHLY READER** is another publication issued by **STREET & SMITH**. This, also, has a wide circulation, chiefly among mail subscribers, to whom it is sent at the low price of seventy-five cents per year.

# THE NEW YORK "CLIPPER."

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

Issued originally on April 30, 1853, this is the oldest sporting paper in America. Its editor at the beginning is its editor to-day, and this enables the paper to be consistent with itself. Its reports are the work of trained minds, who have seen years of associated service; its summaries are compiled with care, so as to be a reference for all time; its comparative reliability has passed into a proverb, and its decisions upon mooted points are solicited from almost every known quarter. Recognized for more than twenty years as the favored organ of the sporting community in America, since 1855 it has steadily grown in popular regard as the leading amusement journal of America. It is a reflex of every phase of show life; its correspondents, almost ubiquitous, are numerous; its reports of amusements are fuller than those of any other journal published on this continent, while covering a greater area of country; and its constant aim is to

furnish facts, which are unchangeable and endure, rather than opinions, which fluctuate and perish. Its many and well-stored columns regularly devoted to the movements of established performers, to the erection and opening of new theatres and halls and the closing of old ones, to the production of new plays upon the legitimate stage and of new acts in the variety, minstrel or circus line and to the debut of new performers and the whereabouts of temporarily retired ones, have of

THE N. Y. "CLIPPER" BUILDING.

late years been supplemented by an old-bill department, to which many of our leading actors, minstrels and circus people are occasional contributors. These old playbills, while recalling pleasant memories, serve to brush away the cobwebs of time, and in many instances of error.

THE NEW YORK CLIPPER is a paper for everybody — a daily and a weekly combined. In it are original serials, bright tales, humorous sketches and dialogues, songs, glees and poems, News of the Week, Record of

the Deaths of Prominent Individuals, CLIPPER Post-office List, and, finally, the department known as Answers to Correspondents, which, although from time to time treating of almost every known subject, are especially serviceable to persons seeking information concerning amusements or sports, the most trustworthy and complete record of both of which are the files of the paper. The questions thus answered weekly have the supreme merit of being *bona fide*; and, apart from the instruction they afford, the answers are invaluable as determining disputes alike in the social circle and among professional people.

THE NEW YORK CLIPPER is essentially a journal of record and of reference. It is to be expected that a newspaper possessing so many features, and in its fifty-six long columns of compact type covering so vast a field, should be in demand in the business community. The extent of this demand is attested weekly by advertisements filling several pages, making public proclamation of manifold industries, and representing a thousand different interests. It has

created a special class of advertisers, and yet all classes avail themselves of its columns, for its moderate tariff places it within reach of all. Its rates of advertising are :

For cards coming under the head of Amusements, *fifteen cents* per line for each insertion; for cards of a Miscellaneous or Sporting character, *twenty cents* per line; for Notices, such as extracts from other papers and incorporated in News Departments (not to be inserted more than once), *thirty cents* per line. The terms are cash, with a reduction of twenty per cent. on all advertisements paid for three months in advance. The paper has no advertising agents, and has never solicited an advertisement. The subscription prices are \$5 per annum, \$2.50 for six months, and \$1.25 for three months; single copies, 10 cents. To clubs of four or more a reduction of fifty cents is made on each single subscription; but subscribers in Canada and the British Provinces are charged \$1 per annum extra, to cover postage. No subscriptions in New York City are taken. All business letters or communications must be addressed to FRANK QUEEN, Editor and Proprietor NEW YORK CLIPPER, corner of Centre and Leonard streets, New York, where the paper occupies an elegant building expressly erected for it in 1869.

# "TIMES," TROY, N. Y.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The TROY TIMES was founded in 1851 by Francis & Thompson. The latter retired in about one year, and John M. Francis continued the paper alone as editor and publisher until 1863, when Henry O'R. Tucker became his partner and the business manager of the concern. The TIMES is one of the most successful journals in New York State, and enjoys a larger advertising patronage than any other paper in the State outside of the cities of New York and Brooklyn. Its circulation is nearly double that of any daily in the State not metropolitan, and it is the favorite journal, not only in the city of Troy, but also in Northern New York and the adjacent portions of Vermont and Massachusetts. Its area of circulation and influence extends from Troy northward along both shores of Lake Champlain to the very borders of Canada.

"TIMES" BUILDING.

The TIMES has an influence commensurate with its business success, and its opinions and sentiments on all subjects are widely quoted, and command general attention. Its editor, Hon. John M. Francis, has achieved almost a national reputation in his profession; while as a diplomatic representative of our government at the court of Greece from 1872 to 1874, when he resigned the position, and as a traveler his name is well known in distinguished and educated circles in Europe. The TIMES is published in an elegant iron building costing upwards of \$150,000, and its office appointments are unusually complete in detail and perfect in arrangement. The building occupies one of the most valuable sites in the city of Troy. It is four stories high, surmounted by a French roof with towers, and presents a very imposing architectural appearance. Its dimensions are 130 feet in length by 50 in width. The paper is printed upon a four-cylinder Hoe rotary press, but its proprietors are now contemplating the purchase of a web perfecting machine, with which to lay its large and constantly-increasing edition more quickly and satisfactorily before its readers. The TIMES is Republican in its political convictions, and an earnest advocate of the principles of that party. During the war, so heartily had it espoused the cause of the government, that in the draft riot in the city of Troy, July, 1863, its office was mobbed, and all its type and material

destroyed. The *TIMES* is a folio 29x41 inches in size, and contains eight columns upon each page. On Saturdays the size of the paper is increased by the addition of one column per page, in order to accommodate the pressure upon its advertising department. The system which prevails in the management of its business departments—especially in the arrangement and classification of its advertisements—is perfect in detail and admirably carried out. This, together with the large circulation of the paper, and the relative cheapness of its advertising rates compared with those of journals of inferior circulation, makes its columns so attractive and valuable to all who desire to reach the public through the press. The *TIMES* is admirably printed, and typographically is excelled in appearance by no daily journal anywhere. It is a representative newspaper every way—in the clearness and freshness of its editorial discussions, in the unrivalled excellence of its news department and miscellaneous selections and in the fullness and intelligence of its correspondence from all parts of the world. As a newspaper simply, it ranks with the best in this country; while as an advertising medium it has no equal (in fact no single journal approaches it) in the territorial limits to which its circulation is confined.

## "THE EVENING BULLETIN," SAN FRANCISCO.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

This journal was founded in 1855, at a time when corruption in public affairs at San Francisco had become the rule, and all the avenues of justice were so completely in possession of the vicious classes, that virtue scarcely dared to raise its head. There was slight exaggeration in the assertion often made in those days, that a ruffian thirsting for the blood of an enemy, or desiring to remove some human obstacle from his own path, could bargain in advance, with sheriffs and courts, and definitely arrange the sum for which he should be put through the forms of a bogus trial, and acquitted of the murder which he contemplated. Gamblers, thieves and ballot-box stuffers were the terror of the cities. The great majority of the people silently mourned this condition of affairs, but seemed powerless. The desperadoes were organized, and therefore formidable. The honest masses were without organization, and so their sentiments were not consolidated and embodied in action. It was in this condition of society that the *EVENING BULLETIN* came into existence. Its aim was, first, to interest the people by providing the fullest and most reliable news; and when its audience was thus secured, its second effort was addressed to the task of arousing public indignation against the vicious classes, and to concentrate a sound sentiment for aggressive warfare upon them. It not only exposed the criminal acts which were sapping the foundations of society, but boldly named the men who perpetrated or were responsible for them. From its first hour it was a success, morally and financially. The masses rallied to the support of its utterance of truths which were already in the heads and hearts of all good citizens, and which now found voice and expression through a fearless and independent journal. Its founder lost his life at the hands of one whose iniquities it had exposed. Then the people arose *en masse*, in the vigilance committee of 1856, visited, swift and sure justice upon assassins, drove ballot-box stuffers, corrupt officials and criminals of every grade beyond the borders of the State, and initiated the reform movement which has freed San Francisco from debt and kept it free, and which has given it, ever since, the best average municipal government to be found upon the continent.

The *BULLETIN*'s existence has been somewhat stormy. It is ever the foe of jobbers against public interest, and of corporations and monopolies when they abuse their power to oppress the people. Necessarily it has challenged the ill will of the selfish and corrupt; but it has constantly won the approval of all who set the true interests of the masses above the greed of the few. Sometimes it has, for a few days, been thought to be in error, when it pointed out some public wrong and persistently warned the people against its consummation. But invariably the result has vindicated its wise foresight, and the cavils of doubters have been turned into pæons of praise. Subsidized journals have been started, time and again, to draw off its business, limit its power and cripple its influence; but the people, to whom it was ever faithful, have adhered to it with as singular fidelity, and "the gates of hell" have not prevailed against it. A memorable instance of its faithfulness against powerful and threatening influences, and of the defeat of those who, whether ignorantly or maliciously, sought its destruction, is fresh in the memory of all. During the autumn of last year it persistently opposed a job, secretly engineered by the then President of the Bank of California, to saddle the city of San Francisco with a debt of many millions, ostensibly for the purchase of city water works, but really in order that the bank President might reap for himself over \$3,000,000 of profit, out of more than double that sum which was to be taken from the city in excess of the true value of the property to be sold. To this end he had corrupted and controlled political

conventions and demoralized political parties to an alarming degree. Day by day he denied the facts, and vicious journalists were subsidized to lavish falsehood and abuse upon the BULLETIN's conductors, in the hope of silencing its batteries or impairing their effectiveness. Just then the Bank of California suspended, and, simultaneously, its president met his tragic end. The panic and wild confusion which followed were terrible and severe. For a brief time a part of the public was made to believe that the BULLETIN had done injustice to the bank President, and had precipitated or created the evils associated with his failure and death. But soon the truth came out; his leading connection with the water job stood confessed; his responsibility for squandered millions and his betrayal of his old and best friends and most sacred trusts were all revealed. Then the BULLETIN was vindicated once more, and its influence, circulation, power and patronage became greater than ever before.

The BULLETIN is in all respects a first-class journal. Nothing is admitted to its editorial, news or advertising columns that can offend the most fastidious sentiment or taste. Thus it is essentially a family paper. Its financial articles and market reports are carefully prepared, and kept scrupulously free from all speculative influence. For these reasons it is found in every banking institution and all first-class mercantile establishments. It presents a rare instance in which an evening journal is recognized as the financial authority in a great mart of commerce and trade. Independent in all things, but neutral in nothing, its opinions upon public topics are as freely and explicitly declared as they are carefully considered and adopted. Thus its influence upon public affairs is deep and strong; and seldom has an unfaithful public servant been able to stand up under its criticism, or has any unjust measure survived its earnest assault. There are few journals in the country which can present such a record; but it is one which every well-informed and truthful Californian will accord it without hesitation.

As a literary journal it has no superior on the Pacific, and its very large weekly as well as daily circulation supplies the reading community with a great variety of miscellaneous matter, embracing the whole field of public affairs, current events throughout the world, agriculture, manufactures, practical philosophy as applied to popular wants, and whatever else it is the office of good journalism to supply. A glance at its columns will attest the high estimation in which it is held by advertisers who desire to reach the intelligent and cultivated classes; it attests also the fact that the BULLETIN affords its proprietors an adequate reward for the intelligence, energy and enterprise which mark its conduct in every department. The BULLETIN Company consists of Messrs. LORING PICKERING and GEORGE K. FITCH, who have been prominent in California journalism from its earliest date, and J. W. SIMONTON, long known in connection with the New York *Daily Times*, and during the last ten years as general agent and executive officer of the Associated Press.

# "THE MORNING CALL," SAN FRANCISCO.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

This journal was established in 1856. It was then little larger than a letter sheet, but was eagerly sought by the multitude who could not afford to buy other newspapers at the high prices then general in the Golden State. Gradually its dimensions increased with its growing prosperity, until in 1869, when it came into the hands of its present proprietors, with a daily circulation of about 11,000 copies. At this time it was about the present size of the New York *Sun*. The new proprietors put into the concern abundant capital, and, what was of more importance, the experience of a lifetime employed in successful journalism. Having procured an eight-cylinder Hoe Lightning Press and other machinery for its use, its dimensions were again increased, until it became the largest paper in America published at its price, or in the world, with the possible exception of the London *Telegraph*. The subscription rate is 12½ cents weekly, per six issues, or 15 cents including the Sunday edition. Now, the pressure upon its advertising columns compels the printing of a full-sized double sheet on Sundays and a half sheet supplement twice per week.

The circulation of the MORNING CALL is most remarkable when we consider that the population of the entire State, excluding 100,000 Chinese, does not exceed 700,000, and that 250,000 is a liberal estimate for San Francisco itself. For more than two years the CALL's circulation has exceeded an average of 30,000 daily. At this time it is above 33,500 per day, and still rising. When one reflects that this is equal to one copy for every seven and a half men, women, and children in the city, it will be seen to be a marvellous evidence of success. A similar percentage to the 1,500,000 population (a low estimate) of New York and its immediate suburbs, would give the journal enjoying it a circulation of more than 200,000 copies daily. That there is no exaggeration in the CALL's claim on this score is readily established, because its proprietors freely admit to their press-room any respectable party, at any time, to inspect its work and satisfy himself. Its regular shipment from New York City of 2,600 reams of printing paper per month, for use of the CALL, will also attest its wonderful circulation to parties at the East who, naturally enough, can scarcely understand the possibility of such a patronage.

It follows that the MORNING CALL is in the hands of all classes. No matter what other newspaper he takes, the intelligent reader adds the CALL. The poor, the rich, the merchant, banker, farmer, trader, mechanic, artisan—all, from the highest to the humblest, buy and read it. Advertisers crowd to it, because they have learned that no other journal can give such wide publicity to their wants or wares. The journal is pre-eminently a newspaper. Entirely independent in politics, while it gives all parties fair and equal representation, it avoids partisan discussion of any question in such manner as to offend honest differences of opinion among honest men. But, like the *Evening Bulletin*, it has a heavy hand for rogues, and is swift to expose and oppose public abuses or wrongs, no matter how powerful the influences or combinations by which they are attempted. To this steady support of the best interests of poor and rich alike is to be attributed much of the CALL's success.

# "THE BEE," OMAHA, NEB.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The BEE, a Republican journal published at Omaha City, Nebraska, is one of a few newspapers in the West that has attained prominence in American journalism.

It was first launched into existence by its present proprietor, Mr. Edward Rosewater, in June, 1871. Though bitterly opposed at the outset by the then established Omaha journals, both Republican and Democratic, through fear of competition and jealousy, its fearless and honest course, coupled with the varied and spicy character of its news matter, gained for it the approbation of the general public, and made it a popular journal among the masses. Its circulation has from its incipency had a steady growth, both at home and abroad. Recognizing the want of a Western journal in the Western country, and the facilities which Omaha as a railway center affords for news gathering, its founder and present publisher has made it his aim to study Western interests and develop the agricultural and mineral resources of the West by bringing them forcibly before the public. In this endeavor every effort to gather and place before the public in an interesting form items of passing events and facts bearing upon the undeveloped resources of the West has been made. The price of the DAILY BEE has been fixed at \$8 per annum, and the WEEKLY at \$2, rates which from their reasonable nature have made the BEE of easy access to all.

The BEE is the first newspaper in the Trans-Missouri country that has issued regularly a series of illustrated editions setting forth in a very striking form the events and improvements of each year. It is the only journal in the West that maintains a regular corps of travelling and local correspondents.

Its CIRCULATION, owing to this wide scope of its news, has become general, extending through nearly every town for eleven hundred miles west of Omaha. The DAILY BEE is now a 36-column journal, and is the only daily west of the Mississippi that issues two editions daily, one in the evening and one in the morning. The morning issue is expressly prepared for its Western readers, to supply them with news almost up to the hour of the departure of the mails. Although over one thousand miles away, the DAILY BEE has a very extensive circulation in Salt Lake City and other Utah towns. In Wyoming, a territory only developed in the past few years, the DAILY BEE circulates over 400 copies. In Omaha City its daily circulation is nearly 2,000. It is delivered to the city subscribers by eleven carrier boys, six of whom are mounted on horseback.

## THE WEEKLY BEE.

In the past two years the demand for the WEEKLY BEE has become so great that it has been deemed advisable to enlarge it to an eight-page, 56-column journal. This enables the publisher to furnish its readers with a large portion of the varied and interesting correspondence which appears in the daily during the week. Its circulation extends through Western Iowa, Nebraska, Dakota, Wyoming, Utah, and the other Territories, and is rapidly increasing.

## EDITORIAL DEPARTMENT.

This is presided over by Mr. Edward Rosewater, who is also the publisher. His literary acquirements and terseness have made him well known throughout the West. Mr. Rosewater speaks four languages with fluency. On the occasion of Rochefort's tour through the United States, after his romantic escape from imprisonment, Mr. Rosewater secured the first successful interview with that individual, and received creditable notices for this effort by the Chicago and New York metropolitan journals. The local news department is

managed by the city editor, Mr. Alfred Sorensen, a former student of Harvard College, who is a practical printer as well as a stenographic reporter.

The BEE also keeps three regular travelling correspondents, who visit every section of Nebraska and the Territories each year. Aside from these, special local correspondents are maintained by the BEE at San Francisco, Salt Lake City, Custer City, Lincoln, Neb., and also a special correspondent at Philadelphia during the Centennial.

#### THE BUSINESS DEPARTMENT.

This is in charge of Andrew Rosewater, manager, and consists of an accountant, mailing clerk, superintendent of city circulation, and messenger. The number of employes in the entire establishment are forty-two. There has been an average of three tons per month of news paper consumed in the past year. Thirty-five newsboys sell the paper daily upon the streets.

The enterprise of the BEE has been acknowledged by the Western press generally. It lately issued a finely-illustrated supplement, showing the city of Cheyenne in detail. It now has in hand a supplement of the scenery of the Black Hills and mining districts, which will be issued in the early part of May.

## THE NASHVILLE (TENN.) AMERICAN.

#### A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

This paper and its predecessors in regular line have existed for more than fifty years in this city. There were the *National Banner* and the *Nashville Republican*. These were united under the name of *Republican Banner*, which itself had an existence of more than half a century. Then there was the *Union*, established in 1835, under the auspices of Jackson in his contest against nullification. Afterwards, in 1849, the *Centre State American* was established as a Democratic paper, which, in 1859, was merged into the *Union* under the name of *Union and American*. These two papers, the *Republican Banner* and the *Union and American*, were the representatives of the party sentiment of Tennessee during all the exciting periods of its political history—the former being Whig and the latter Democrat. The great names of Jackson, White, Bell, Polk, Johnson and others who have impressed their names on the country's history, have fought their glorious battles of principle through these columns. On the 1st of September, 1875, the *Union and American* and the *Republican Banner* were consolidated under the name of THE AMERICAN, and its proprietors trust that in this name it will be printed for all time to come. The last fusion and change of name was no more a matter of business than a matter of patriotism. The general unanimity in the sentiments of the people of the State suggested the change on political and patriotic considerations, and the business view conceded it. It now wields the leading influence in the State.

#### THE AMERICAN

Has now a positive circulation much greater than that *claimed* by any newspaper published in the States of the South, except Kentucky, Missouri and Louisiana. Its united editions exceed several which claim the greater number. It has a firm hold on the confidence of the people, because it has never deceived them; and we are gratified to say that in spite of the "hard times" its subscription lists are greater than those of both its immediate predecessors, and greater than any paper ever had in Tennessee. Address THE AMERICAN, Nashville.

# "THE SHOE AND LEATHER REPORTER."

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

THE SHOE AND LEATHER REPORTER is the oldest industrial newspaper published in this country—the pioneer of its class—leading the van of the great army of "Trade papers" which register the progress of nearly every branch of business conducted in the United States at the present time.

The REPORTER was founded in August, 1857, and made its first appearance as a semi-monthly. Its circulation and business increased, and it was issued weekly at the end of the first six months. It has since been enlarged, until it is now almost ten times the size of the original sheet.

To the casual observer there might seem to be little of importance to chronicle in the lines of shoes and leather, unless it might be records of prices or dry statistical figures; such, however, is not the case. There is no product in which the chemical change is more intricate and interesting than in that of the manufacture of leather from hides and skins; no industry is pursued where the aid of a greater or more varied amount of machinery is required than in the production of boots and shoes, and, with the single exception of agriculture, no branch of business in this country employs so large a capital or requires a greater exercise of skill. So much for the mechanical part. As a mercantile interest it stretches to every quarter of the globe. The work of collecting and disseminating information in every branch of these great industries, and of defining the relations they bear to each other, is immense, and the publisher employs the best capacity obtainable for a thorough and careful compilation of the market reports, as well as the most intelligent criticism of the various inventions and theories introduced to the trades.

The circulation extends throughout all the States of the Union, and it has a considerable list of subscribers in Europe, and in the East and West Indies, South America, and in fact every country where hides and skins are a product, or shoes and leather a necessity. It is under the editorial charge of a gentleman who has pursued from boyhood the business of making and dealing in leather, and has an extensive acquaintance with men engaged in all the various branches of the trade at home and abroad. Experience and knowledge combine to qualify him to represent the views and express the sentiments of his co-laborers in the great industry to which the paper is exclusively devoted. He is supported by able assistants in the three cities; by capable correspondents in the West, the South and the chief foreign marts. Mr. Jackson S. Schultz, who is thoroughly well versed in the practice and theory of the tanning trade, is a regular contributor to its columns. He is at present engaged upon a serial work, defining and illustrating all the details and mechanical processes of the art of tanning, the initial chapter of which was published in the first issue of the current year.

A supplementary pattern sheet is published quarterly, containing the latest styles of boots and shoes, giving exact directions for reproducing the various styles. It is artistic in execution, and is a prominent feature of the paper, being looked for and preserved.

The compilation of the statistics of the trade necessitates an amount of care and labor which can only be appreciated by those who have occasion to refer to the semi-annual tables; they are accepted by the trade as a valuable aid in their transactions.

THE SHOE AND LEATHER REPORTER is published simultaneously in New York, Boston and Philadelphia by Isaac H. Bailey. The subscription price is \$3.50 a year. The New York office is at 17 Spruce street, the Boston office at 114 High street, and the Philadelphia office at 149 South Fourth street.

# THE "ILLINOIS STAATS ZEITUNG."

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

Of those German newspapers published in the United States, which have for a number of years exerted a positive and decisive influence upon public opinion, there is, in the great Northwest, none that could claim to excel or even to equal the ILLINOIS STAATS ZEITUNG of Chicago. The ILLINOIS STAATS ZEITUNG, established at a time when the great metropolis of the Lake region was a town of barely 20,000 inhabitants, has grown, both in its value as a newspaper and in the influence wielded by it upon many thousands of readers, in proportion with the wonderful development of its place of publication. It is, and has been for almost half a generation, a recognized political power, perhaps so to a greater extent than any other German daily paper in the country. In this respect not only does the ILLINOIS STAATS ZEITUNG fully rank with its Chicago contemporaries published

in the English language, but it has on several occasions successfully defied and actually defeated in some of the hottest political contests a combination of the entire English press of Chicago, without any exception. In Germany it is probably better known and more widely quoted than any other German-American daily paper, except its New York namesake.

also in the completeness, variety, and freshness of its news; in its careful selection of the gist of foreign newspapers; and in the excellence of its correspondence. The remark has frequently been made by German-Americans, temporarily residing in their native country, that they found a greater amount of interesting and important news from Germany in the columns of the ILLINOIS STAATS ZEITUNG than in the great papers easily accessible to them in Germany itself. The comments of the ILLINOIS STAATS ZEITUNG upon the public affairs of Germany have often, on account of their thoroughly American independence of thought and directness of expression, been quoted, and been either highly commended or angrily discussed by leading newspapers of Germany. As an evidence of the position generally accorded to the ILLINOIS STAATS ZEITUNG abroad, the fact may be mentioned here, that, beside Mr. Smalley of the *N. Y. Tribune*, the chief editor of the ILLINOIS STAATS ZEITUNG is the only American editor to whom the Chancellor of the German Empire, Prince Bismarck, has accorded an extended interview, the record of which was, at the

"ILLINOIS STAATS ZEITUNG" BUILDING.

There must be good reasons for such success other than mere good luck or the importance of the city where the ZEITUNG is issued. Such reasons may be found in the intense positiveness of mind, the perfect independence of opinion, and the trenchant keenness of judgment displayed in the discussion of all questions of public interest in the columns of the ILLINOIS STAATS ZEITUNG; and

time, translated and copied from the ILLINOIS STAATS ZEITUNG into many hundreds of newspapers in this country, in England, Germany, and even in France.

In the quality of its reading matter the ILLINOIS STAATS ZEITUNG is the second German-American newspaper, ranking immediately next to its New York namesake. Its circulation is the largest of all German dailies, excepting only the New York *Staats Zeitung* and, perhaps, one daily published in the West. Its weekly issue is widely circulated all over the Northwestern States, and in its efficiency as an advertising medium is superior to almost any other weekly publication in the Northwest.

When, in October, 1871, the city of Chicago seemed to be wiped out from the face of the earth by the great fire, the ILLINOIS STAATS ZEITUNG was a greater sufferer than any other paper published in Chicago, for this reason: that not only its entire establishment (including files and safes with books) was utterly destroyed, but all its editors, reporters, clerks, compositors, pressmen, with the exception of barely half a dozen were "burned out" of their homes and personal property. It took two or three days to gather up a mere handful of the employees of the paper and to provide a temporary abode. Then there arose the further difficulty that, while English type could be had in abundance within call, it took weeks to procure the required quantity of German type. In fact, the struggle against the effects of that terrible calamity to many would have appeared utterly hopeless. And yet, after having been printed in Milwaukee for a few weeks, twenty days after the great fire the ILLINOIS STAATS ZEITUNG was issued again in its old size from its own press, and fifty days after the fire it enlarged its size and the amount of reading matter by one-sixth over what it had been before the fire. The hackneyed metaphor of the Phoenix rising from its ashes would not seem out of place in this connection.

In rebuilding Chicago the ILLINOIS STAATS ZEITUNG would not be found behindhand. A site for a permanent home was selected within one square from the heart of the business center of the city, the Board of Trade building, the new Court House, the W. U. Telegraph, and Military Headquarters building. Fronting Washington street (40 feet) and extending 110 feet on Fifth avenue, the ILLINOIS STAATS ZEITUNG block covers an area of 4,400 square feet. Its height from the floor of the basement to the roof is 100 feet, making it the tallest building but one within five squares in each direction. The architecture is of that chaste and massive style of modern renaissance to which the new portions of the great cities of Europe owe their proudly dignified, monumental aspect. The ornamentation is in excellent taste and superior to that of any other public or private building in Chicago. For, while the statues of Franklin and Gutenberg, raised over the porticoes of the two main entrances, happily denote the character and purposes of the building, the top of the house is beautifully and appropriately ornamented by five life-size statues, representing Science, Industry, Agriculture, Commerce, and Justice. These were cast in Paris, while a very characteristic and expressive center piece, representing the reclining figures of Columbia and Germania, is the conception of a French artist who has made Chicago his home.

The ILLINOIS STAATS ZEITUNG enjoys a prosperity which it may justly be proud of, since it may see in it a hearty recognition by the people of its unceasing efforts, not only to satisfy, but to anticipate the wants of its readers. Its circulation since the great fire has so increased, that in order to issue its large edition in proper time for early distribution, it has to stereotype its forms and print them from a Bullock press capable of turning off 14,000 copies in an hour.

Standing upon the firm foundation of established success, shaken as little by the financial crisis of 1873 as by the great fire of 1871, the ILLINOIS STAATS ZEITUNG may, without fear of being charged with self-conceit, lay just claim to the designation as one of the representative newspapers of this country.

# "WESTLICHE POST," ST. LOUIS, MO.

"Die größte und verbreitetste deutsche Zeitung im Westen."

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

It has been pronounced that "*The progress of a country is best indicated by the growth of its newspapers;*" and the present position of the WESTLICHE POST—foremost in rank among the daily journals of the Western States of America—clearly proves this assertion.

The career of this paper during the comparatively few years of its history, marks the success which hardly ever fails when industry, perseverance and able and faithful management are united in conducting a newspaper in this country. The WESTLICHE POST has fairly kept even step with the development of the West, and in clear and cloudy days foremost stood up for general progress at home and abroad and for the interest of the German element, which for ever has represented this position in the history of the United States.

Established September 27, 1857, it was then a small paper of little influence and of small circulation, while it now ranks among the leading journals of this country, with an average circulation of more than fifteen thousand copies, and since April, 1874, is fairly es-

day having nine columns, and those of the weekly ten. The Sunday edition is accompanied by an eight-page supplement, the MISSISSIPPI BLAETTER. The WESTLICHE POST circulates in every State and Territory of the great West and South, from Ohio to the Pacific shore, and from the far Northwest to the Gulf. It has a larger circulation than any other German daily paper published west of New York, and as an advertising medium is surpassed by none.

It is incorporated according to the laws of the State of Missouri. Arthur Olshausen, Esq., is the president, Messrs. E. Preetorius and Carl Schurz are the editors, and Gustavus A. Olshausen, Esq., is the treasurer and secretary. It is not strange that with the co-operation in its management of gentlemen possessing the exceptional ability of Mr. Carl Schurz, it should have acquired its great moral influence, as well as its commercial value, in respect to the German population of the West. Its always-crowded advertising columns show peculiarly that its excellence is acknowledged and realized by the public in general, and not only by a fragmentary class or nationality. Its serried advertisements re-

"WESTLICHE POST" BUILDING.

tablished in its own fine building SOUTHWEST CORNER OF FIFTH AND MARKET STREETS, ST. LOUIS, MO., on the most prominent thoroughfare of the Queen City of the Mississippi Valley, right opposite the courthouse, and in the most prominent and central location within the city.

The WESTLICHE POST is published in folio size, and has a daily, weekly and Sunday edition, each of four pages, the pages of the daily and Sun

mind a person of every branch of commerce, finance, and trade, of things domestic and foreign, and in short, of every department of human life. The names of its local advertisers do not merely consist of those betokening a Germanic origin, but savor of nativities quite distant from the Rhine. This would of itself be very favorable evidence. Men of moderate or ordinary trade or business are not apt to resort to publications in foreign languages for the advertising of that which they have, unless they are imbued with a decided belief in the standing and merits as an advertising medium, if not as a general newspaper, of a publication of this character selected by them. No one can deny that the WESTLICHE POST possesses this standing and these merits to an unusual degree, both as a general newspaper and as an advertising medium. It has no superior in the West, and perhaps not elsewhere, in regard to celerity and enterprise in laying before its readers that which is "news" in the strictest sense. Everything not out of place in a daily newspaper appears in its diurnal editions, while its Sunday issues are models of well-chosen literature. The weekly is a judicious and succinct history of the occurrences of each week. The circulation which the WESTLICHE POST enjoys represents a far greater influence than an equal circulation of an English paper. In the large and ordinarily prosperous American cities, it is not at all unusual for an individual to daily pass through the labor or diversion—in which ever way he may regard it—of perusing two or three, and sometimes even four or five, of the newspapers that circulate in his locality. He reads them all with equal attention or inattention, as his humor may lead him, and seldom allows either one of them to have the special honor of arousing his most profound reflections. A great number of the American people, indeed, appear to regard their newspapers as something which it is their duty to criticise and to pick fault with if they can. They are capable of finding considerable amusement in seeking to invent transitory theories which shall be utterly at variance with those advocated by the newspaper they may happen to read, and are seldom so complacent as when some opinion which they have expressed proves to be more correct than that of the newspaper. Among the Germans, however, the case is different. They look up to respectable newspapers as a species of paternal guides and instructors, and the feeling with which they regard the most worthy of German publications can hardly be appreciated by a critical, fault-finding, captious American mind. Though a German may not be reluctant to express his disapprobation of the course of a particular paper, he never does it with the same invectives and fierceness so frequent in America. The influence of German newspapers, indeed, is comparatively extreme; and the influence of the WESTLICHE POST, with its great circulation, may be conceived. That it *worthily* possesses and wields this influence is very plain. It is a paper in which the German populace of the Western States are not and need not be ashamed to trust, and is the best existing fulfilment of their ideal of a newspaper. In every respect, the WESTLICHE POST of St. Louis may be pointed out as a proper representative of the Germans in our country—an element which bravely sustains the claim of industry and practical progress, and has given Americans the least reason to regret that America is cosmopolitan.

# THE MIRROR, MANCHESTER, N. H.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The Manchester DAILY MIRROR was founded in 1850, and the WEEKLY MIRROR in 1851, by Joseph C. Emerson. In October, 1852, both papers were purchased by John B. Clark, who has owned, edited, and published them ever since. As the MIRROR grew in strength and influence, its owner purchased and his establishment absorbed the *Daily American*, the *Weekly American*, and the *New Hampshire Journal of Agriculture*, all of which are now comprised and published under the MIRROR headings. The MIRROR AND AMERICAN and the WEEKLY MIRROR AND FARMER are the most successful journals in New Hampshire. From the start money has been spent upon them with a free hand in every department, which, with liberal dealings with friends and patrons, has put them far in advance of all rivals, and given them a circulation, influence, and advertising patronage which no other even claims.

Manchester, New Hampshire, is the fifty-fifth city in population in the United States, according to the last census—larger than any two other cities in New Hampshire. It is fifty-two miles from Boston, and is devoted to manufacturing. Its corporations employ nine thousand persons, and have a monthly pay-roll of THREE HUNDRED AND ELEVEN THOUSAND DOLLARS. They use every year twenty-six thousand and one hundred tons of coal, eight thousand cords of wood, and about thirty million feet of gas. The mills have about three hundred thousand spindles, and make *one hundred and forty-three miles of cloth a day*. The Manchester Locomotive Works can turn out fourteen locomotives a month, and the Amoskeag Manufacturing Company fifty steam fire-engines a year.

To make a paper worthy of such a city, and one which should find its way into nearly every family, and be authorized to speak for and to the substantial and intelligent citizens has been the aim of the publisher of the MIRROR, and that he has succeeded the subscription books and daily sales of the paper fully prove. The DAILY MIRROR AND AMERICAN is an evening paper, issuing three editions each afternoon, and has a larger circulation than any other two dailies in the State.

The WEEKLY MIRROR AND FARMER is an eight-page sheet, of forty-eight columns, and is a general news and agricultural paper. Its first and second pages are devoted to farming interests, and are filled with live and readable matter, which gives it a welcome, and makes it authority in a large proportion of the farm-houses of New Hampshire and Vermont.

The other six pages are devoted to news, editorials, selections, and advertisements, so written and arranged as to give timely and bold expression to the convictions and opinions of honest people, and to present a complete and reliable record of the world's work, wisdom, worry, and wickedness during each week.

The paper owns no man as master, and is the slave of no sect or party. It speaks for its readers openly, freely, and without fear or favor. Its system of news gathering is nearly complete, and in the department of State news particularly, its numerous correspondents and reporters, and a free use of the telegraph enable it to keep far in advance of its rivals. These features have introduced the MIRROR, and make it a household word among all who are interested in New Hampshire news and have a liking for an independent and outspoken organ of public opinion.

It reaches, in large clubs, nearly every town in the State, and many in Vermont and Maine, and has not only an aggregate circulation larger than any

other paper in the State, but larger than any other one of its class published in New England, out of Boston. Its circulation is a natural and healthy one. It employs no agents to crowd it into places where it is not welcome, and is not sent to any man who has not paid for it. Its friends are such of their own volition, because it meets their wants and approves itself to their judgment; and they are friends who, when once they come, are sure to stay. The MIRROR is by far the best advertising medium to be found in New Hampshire. Its rates are less than three-fourths of a cent a line for each thousand circulation.

## THE CLEVELAND HERALD.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The prosperity and growth of a country can be estimated very fairly by its newspapers. The growth of the West, or what was a few years ago known as the West, has been beyond belief. Cleveland has increased since 1830 to the present time, from a small village to a city of 175,000 inhabitants. The HERALD, the oldest paper here, was established in 1819, and has done much to forward the progress of this section of Ohio, and has steadily kept pace with that increase. It was

various departments of its large business. The counting room and stock room are on the first floor. The press and engine rooms are in the basement, which contain besides the newspaper presses, folding machines, and duplicate boilers and engines, almost precluding the possibility of a delay of our publications from accident to our machinery. The editorial rooms and composing rooms are on the second floor. The three stories above are used for jobbing, book binding, electrotyping, &c. There are thirteen presses used in job printing, besides a large number of machines for paper cutting, card cutting, perforating, embossing, &c. In fact, it is one of the most complete offices of its size in the country.

started as a weekly, on a small sheet, and continued so until 1837, when it was issued daily. It has been since that time a prosperous paper, until now its aggregate circulation exceeds that of any paper in Northern Ohio, and is printed on one of Hoe's Rotary Presses, eight pages, the size of the New York Herald. The engraving represents the office, built and occupied by the proprietors some twenty years since, and is divided and conveniently arranged for the

# THE STATE REGISTER, DES MOINES.

---

THE LEADING PAPER IN IOWA.

---

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

---

Iowa, the young giant of a State which rose almost into instant greatness, springing from an Indian hunting ground in 1840 into a rich State of nearly a million and a half of people in 1876, has found always its most potential adjutant in its press. The good story sent out to the world by the Iowa press of the fair fortune there awaiting honest industry, drew to the fertile prairies an emigration of reading, cultured, enterprising people, who naturally became, in turn, the stimulating patrons of the press. In keeping pace with the bounding energies and wonderfully rapid development of the State, the press was fairly forced into early prominence, influence, and wealth. At the head of the vigorous papers of the vigorous young State has stood for ten years the **STATE REGISTER**, published at Des Moines, the capital—which stirring young city, an Indian camping ground in 1848, is now a place of 20,000 people, with all the modern appointments of civilization, gas, water works, many and large manufactories, and five railways. Located at the geographical, political, and business centre of the State, the **REGISTER** enjoys the benefit of commanding position and superior advantages—and, with double the circulation of any of its Iowa contemporaries, circulates largely in every county in the State, and goes abroad in the Union and to other countries as the representative Iowa paper. It has no competitor in Iowa as a newspaper or as an advertising medium. The daily edition is a large thirty-six column, four-page sheet, the largest paper and giving the largest amount of news and reading matter of any paper in the world, published in a city of 20,000 inhabitants. The weekly edition is a mammoth forty-column sheet of four pages; it sustains, in addition to its other features, an agricultural department, edited by C. F. Clarkson, a practical farmer, and an old-time editor—who makes his department an authority with Iowa farmers, and a necessity to them, thus giving it an immense circulation among that especial class.

The **REGISTER** is known in newspaper circles to be the most valuable press property in the Northwest, outside of Chicago. It occupies a home—and as its own home—a fine brick building 22x100 feet in size, with three stories besides basement, all of which the establishment occupies. There is maintained with the paper the largest book and job printing offices in the State, which for years have done and are now doing the State printing. The **REGISTER**, its machinery, and building are estimated at a total value of \$150,000, and that money would not buy them, cash down. The paper is now printed on a double cylinder Hoe press, made expressly for it, but which will soon have to be superseded by one of double its capacity. The first aim of the **STATE REGISTER** is to be a paper of news, next of politics, third of business, then of literature—always of life and vivacity. It is conducted on the live idea of never being found dull. Its proprietors—both young men, just turned into the thirties—are enthusiasts in their profession, and enamored of their paper. They were both raised in a printing office, and their lives and ambition are in their work. This inspiration is the working motto of their subordinates, and every editor and every reporter has as much pride in the paper and its success as the proprietors have. The paper has but two owners, R. P. Clarkson, the business manager, and J. S. Clarkson, the chief editor. The money they have invested in this now valuable

property is of their own gaining, earned by hard work and sheer business tact. The young proprietors of an old, fairly-established, popular, and profitable paper, they will keep the property permanently and improve it daily.

The pride of the paper is in its State and city. To the upbuilding, advancement, and progress of both it lends every effort and every energy. In politics the paper is radical republican. But it has been guilty frequently of bolting bad nominations which its party has made. In all things the REGISTER, as a constant and long-time reader of it would judge, proposes to have the independence and vigor of the prairie—to be always worth the money paid for it by anybody—to hold unrivalled excellence in its own State as a paper of news—to be the best possible advertising medium within the territory of its circulation—and, generally, to be the best and best paying paper of its size and field in the country.

## INDEPENDENT STATESMAN, CONCORD, N. H.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The INDEPENDENT STATESMAN is a large eight-page paper, Republican in politics, and fearless in the advocacy of its principles. It pleads earnestly for reform, in its truest sense, and for the restoration of the government to the purity of the fathers. In its own State it occupies the foremost position as to all the elements that combine to make a desirable country newspaper, and in the ability shown in its editorial columns. Its agricultural and miscellaneous departments are especially attractive, and its full State news makes it widely sought for both in and out of the State. In short, its fine qualities have steadily advanced

it in the estimation of the people, so that it has reached a circulation (10,000) almost unequalled for a country newspaper. It was established in the year 1823. REPUBLICAN PRESS ASSOCIATION, Publishers. EDWARD A. JENKS, Manager.

The DAILY MONITOR, established in 1863, is one-half the size of the weekly. It finds a generous circulation in the city of Concord and the county of Merrimack.

# THE NEW YORK EVANGELIST.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

THE NEW YORK EVANGELIST is in the forty-seventh year of its publication. Its career has been a prominent one. It sprang at once into conspicuity as the champion of the rising cause of the slave and of temperance reform, and especially as the advocate of revivals and of a greater tolerance of new methods of aggression on the part of the Churches.

Its early years were marked by great movements of population, as well as by the earnest discussion of social and religious questions. The Erie Canal was then a new and gigantic improvement—the wonder and pride of the whole North. It was the chief channel of our Western trade. It brought wheat and corn and furs to tide-water, and returned their equivalent. It also served as an highway and outlet for the enterprising young families of New England. They crowded its jaunty packets and settled along its borders; while many of the older residents of the region, feeling the general impulse of our westward-moving empire, covered their stout wagons with canvass and took up the long march to Ohio or remoter Michigan. (It was in the growing villages and cities of this new theatre of commercial activity that the late President Finney won his greatest successes and most enduring fruits as a preacher of the Gospel. It is also worthy of mention here that his celebrated Lectures on Revivals were reported for and published exclusively in this paper.)

Sprung of fathers who had borne the burden and heat of the day in revolutionary times, and in the later war with the mother country, these thrifty sons of freedom had, for the most part, the consciousness of a responsibility for the moral and intellectual culture of their growing communities beyond their own well-ordered families; and material and moral progress followed in their track as they came from New England, Eastern New York, New Jersey, and Pennsylvania. Churches and schools sprang up where lately only the dense and silent forests stood.

Religiously of several denominations, the Presbyterian and Congregational elements predominated, and these, under the then "Plan of the Union," made common cause, and the NEW YORK EVANGELIST, under the able conduct of the late Dr. Joshua Lavitt, became their great mouthpiece.

Recognized and sustained by such a people—the first and best of their communities—at a time when men's minds were beginning to be deeply stirred in view of the wrongs of slavery, and by other questions already hinted, and standing firmly to these councils of charity and humanity, and of progress as well, in later years, when the "war of words" gave place to the more terrible "arbitrament of the sword;" and withal never abating one jot of heart and hope in all the long struggle which followed—the NEW YORK EVANGELIST is enabled to look back from the vantage ground of this Centennial Year with devout thanks to God, and sincere congratulations to its many readers. It has no reason to be ashamed of its record.

Since the war and the auspicious reunion of the two Assemblies of the Presbyterian Church—which reunion this paper promoted with all its power—the great Evangelical Churches, as well as the Nation, seem to be entering upon a new era—one that betokens their enlargement and a corresponding increase of moral influence. And surely the remaining problems to be solved ere the prayer of our risen Lord shall be brought to pass, are such as can be best, yea, only successfully dealt with by the more general reception of the Gospel itself. It is the only real solvent and unifier of the nations that are now for the first time, by reason of swift-flying ships and trains, face to face with each other. The EVANGELIST, in common with an increasing number in all the Churches, looks to see the great wealth and material resources which have originated

quite within the span of its own life, not selfishly hoarded, but more and more freely given to the furtherance of the Gospel and kingdom of Jesus Christ.

Identified with a particular corps of our Lord's militant host, the **EVANGELIST** is quite content with these relations. It loves the order and strength of the Presbyterian Church, and seeks the things that make for her peace and progress. Mindful of its name and origin, it will continue to labor for and welcome the return of such ingatherings as marked the time of Edwards, Whitefield, and Finney—such as shall purify the social, commercial, and political relations of the whole nation. It is taken chiefly by ministers and the more intelligent and reliable Church members. It has lost many old subscribers by reason of death, but the children's names have taken the place of the fathers. They have carried it from their early Eastern homes to the Rocky Mountains, and beyond. It seeks to extend its circulation everywhere throughout the Presbyterian Church. No longer shut out of the South, it asks for new friends there as well as at the North and West.

Any complete catalogue of the names of those who have from time to time become recognized as contributors to this paper would require several pages of this publication. They are, or were, our best known ministers and laymen. It is hardly necessary to add that the best and ablest pens will continue to be employed in its columns, and all the features of a first-class religious and family paper will be maintained. It comments upon a wide range of topics, from its proper point of view, and will include, as heretofore, a large variety of miscellaneous and literary reading, and its special departments for the children, the Sunday school, and readers interested in rural and scientific information. Its subscription price is three dollars a year.

An especially attractive feature of the **EVANGELIST** for coming months (as for a full year past) will be the letters of its editor-in-chief, Rev. Henry M. Field, on his way around the world. It is seldom that a series of letters have been so generally quoted by the press of the country, and so constantly referred to as a source of instruction and delight, both in the editorial and business correspondence of the paper. We may add that it is probable, in response to the wishes thus expressed, that their author will issue them in a more permanent form on his return home.

When last heard from, Dr. Field was just quitting India. And we cannot better close this brief and inadequate sketch of the journal which he has managed now for more than twenty years (with the assistance of his partners, the Rev. Wm. Bradford a short and Dr. J. G. Craighead a longer time), than by quoting the closing paragraph of the last letter to hand from that remote quarter. Dr. Field writes:

"And here I take leave of the readers of the **EVANGELIST** for several weeks, as we are just 'launching off' from this part of Asia into what seems almost like boundless space. On Monday morning, the 13th of March, we leave India for Burmah. Crossing the Bay of Bengal we shall proceed first to Rangoon, and then down the coast to Maulmain, Malacca, Penang, and Singapore, stopping a day or two at each point, and thus taking in the whole voyage seventeen days—twice as long as it took us to cross the Atlantic. From Singapore we may go up the Gulf of Siam to Bangkok, or proceed direct to Hong Kong. At Singapore we are almost exactly on the opposite side of the globe from the longitude of New York. In due time we hope to emerge from this wilderness of islands and oceans, and come around on 'the right side' of the planet, which is, of course, the American side. Our letters will hereafter go East across the Pacific, instead of West across India, and Egypt, and Europe, and the Atlantic.

# "THE WATCHMAN," BOSTON, MASS.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The WATCHMAN is, with a single exception, the oldest religious weekly newspaper in the United States. In character and in reputation, in quality as in age, it is the first journal of its denomination. It was founded in 1819, and is, therefore, now in its fifty-seventh year.

The *Christian Watchman*, the original paper, was the only Baptist journal in New England until 1840. In that year the *Christian Reflector* was established.

"THE WATCHMAN" BUILDING.

The two papers were united in 1848, under the double name of *Watchman and Reflector*. The new journal grew in popularity, under the editorship of Rev. John W. Olmstead, D.D., and the efficient business management of Mr. D. S. Ford, now of the *Youth's Companion*, until in 1867 its circulation was more than 20,000 copies. In that year a new departure was taken. The paper was doubled in size and became the first to assume the eight-page form now so common with the religious weeklies. The *Christian Era*, another Baptist paper, which was moved from Lowell to Boston in 1856, being more radical than its older brother, divided with him the patronage of New England until the close of 1875, when both

papers were purchased by a corporation of laymen and united under the present new, yet good old name—the WATCHMAN. The combined lists of the two papers gives the new journal a circulation larger, with one exception, than that of any other Baptist organ in the world. The WATCHMAN, though its special field is New England, goes largely into every State and Territory of the Union. It has readers in every civilized country on the globe.

Our space will not allow us even to mention the men, good and true, who either by their editorial or business services have contributed to the stability and prosperity of the paper. At present its editorial staff consists of Rev. John W. Olmstead, D. D., who has been connected with the paper for thirty years; Rev. Franklin Johnson, D. D., of Cambridge; Rev. George C. Lorimer, D. D., pastor of Fremont Temple, Boston; Prof. Heman Lincoln, D. D., of Newton Theological Institution; Rev. W. N. Clarke; Mr. J. B. Houser; and Mr. Thomas L. Rogers. Rev. Granville S. Abbott has charge of the Sunday School Department, and the Family Department is under the supervision of the well-known authoress, Mrs. Jane Dunbar Chaplin. Mr. T. L. Rogers is the business manager, and the office of the WATCHMAN is at the "Headquarters of New England Baptists," Tremont Temple, a cut of which building accompanies this sketch.

# THE KANSAS CITY TIMES.

THE REPRESENTATIVE JOURNAL OF THE "NEW WEST."

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

*The New York "Herald of the West."—The Kansas City TIMES' fast newspaper train, carrying early copies of that paper between Kansas City and Topeka during the session of the Legislature, January, 1876.*

It has required decades and the lives of many men to establish the reputation now enjoyed by the metropolitan papers of this country. Until within a very few years no journal west of the city of St. Louis, Mo., has come in for a position in the catalogue of newspapers now occupying prominent places. And so many are the obstacles in the way of accomplishing this that there is but one instance where it has been done. This exception is the Kansas City TIMES. Other newspapers in its section are older, but beyond their naturally legitimate section they are unknown and have achieved nothing beyond local influence and reputation. That the Kansas City TIMES has leaped beyond the ordinary groove and become something greater may seem marvelous to the average reader of remote sections, but the fact can be attested by leading journals of the country, by the official figures given of its circulation by what is recognized authority in journalistic circles, and by the immense advertising patronage from abroad which has sought its columns.

## THE SPIRIT OF ITS PRESENT MANAGEMENT.

In 1871 the TIMES was purchased by the present management and organized as a corporation into what is now known as the Kansas City Times Company, with M. Munford as business manager. Prior to that the paper had been nothing beyond what its contemporaries were. The new management saw the field which was presented. In the whole domain of a country that is fertile and populous—a country that has excited the curiosity and admiration of the most distinguished tourists—which occupies the scope that stretches from the western bank of the Mississippi up into the range of the Rocky mountains—there was not a single paper which had a metropolitan feature. By nature Kansas City seemed to be the gateway of the western continent, and from the summit of one of its hills the statesman Benton had prophesied that here one day the commerce of the East would meet the trade of the wide West and that of India. What was then considered a poetic fancy has been almost literally verified. Here the railways of the East and West have centered. From here they have branched out in every direction, and all along the innumerable lines are towns, villages and cities that are daily opening up the fertile lands adjacent, which are being occupied by a class equal in intelligence and refinement to the older sections of the Union. Kansas City being the chief entre-port of the immense trade coming from all of these, the capitalist has established himself here, and immense elevators have become necessary for the accommodation of the almost fabulous cereals of a

country the most productive and progressive under the sun. Texas and the Indian Territory being the chief grazing grounds of the land, and being in direct communication by rail with Kansas City, here are established the largest beef and pork packing establishments in the United States, from which are yearly exported direct to Liverpool immense quantities of bulk meats. These facts, in addition to the mercantile houses which have to supply to a great extent the wants of the towns and minor cities on the various railroads leading here, made the point one of the most favorable in the West for the establishment of a first-class daily paper that would be metropolitan in all its appointments. From 1871 to the present time such a strict and rigid adherence to this idea has been kept up that the intended results has already been achieved, until the *TIMES* is invariably alluded to by its many contemporaries as the "*New York Herald* of the West." Upon assuming control of the paper the new management put in steam-power presses to supply on time the increase which commenced at once to its subscription lists. The *TIMES* became recognized at this point as the leading morning paper of the city. Its make up, its resume of daily news from neighboring vicinities, its special telegrams, which were first introduced by it in the West, made it the very foremost in the ranks of Western journalism. When this was established the ultimate result was attempted, and the success was not only attained but so suddenly did the paper leap to that station that its political opponents of their own accord pronounced it a marvel of enterprise, carrying with it a dash which caused it to make inroads upon the circulations of its St. Louis contemporaries.

#### ITS POLITICAL INFLUENCE AND STANDING.

At the State capital it became the recognized organ of its—the Democratic—party of the State, and its opinions and views were quoted by the law-makers of the commonwealth. As wonderful as this appeared to the larger and older papers of Western cities, it was eclipsed by the *TIMES* crossing the border and entering the State of Kansas, where it at once surpassed in circulation and influence every daily paper there, and to-day it is delivered in the leading cities of that State, by carriers, almost as early as the morning papers of those cities. Its general circulation in that State exceeds the combined circulation of all the dailies of Kansas. This is a step in advance of any newspaper west of the Alleghany mountains. It stands out as especially creditable to the *TIMES*, in consideration of the fact that while the paper is fearlessly and ably Democratic the State of Kansas is overwhelmingly Republican in sentiment. To gain a foothold under such circumstances as these is a triumph which the oldest and ablest paper of the seaboard might well wish to achieve and wear with pride. In accomplishing this the *TIMES* has won the confidence of the people of Kansas, because its policy has never been adverse to the interests of that State, because it contains the latest and freshest news, and because it has stood by the reform movement there in all of its endeavors to root out a nest of political corruptionists that took possession of its State affairs only to plunder. Every *expose* of fraud and corruption that has been made is credited to the vigilance and ability of the *TIMES*.

#### THE *TIMES*' ANNUAL REVIEW.

Another feature which was introduced by the *TIMES*, and has been steadily kept up, is its mammoth yearly review of the commerce, trade, and growth of its city and the circle of country tributary to it. So popular has this feature become, that on the first of the present year its review was the largest ever issued—surpassing those of St. Louis—covering twenty pages of closely-printed matter, accompanied by fifty-two distinctive cuts of public buildings, a mammoth view of the Great Union Stock Yards, all printed on the finest paper. The circulation of this review was over and above that of anything similar ever issued from a Western press. So complete was it, and so gigantic an undertaking that the columns of the papers of the West, South, and even many of the metropolitan papers teemed with encomiums, which have been collected and are now issued in a neat volume.

## THE TIMES' FAST NEWSPAPER TRAIN.

When all of these features had been perfected, and the *TIMES* had achieved that which its management had foreshadowed upon their accession to it, the public seemed to be content, and as the *TIMES* had become a visitor in every hamlet and metropolitan in all of its workings, there appeared to be nothing beyond except a maintainance of what its energy had wrought. It was at this juncture that the managers conceived another feature which, when it was announced would have been discredited had not the public become convinced that every advance made by the paper had been carried to the front. This was none other than the starting of a daily fast newspaper train of its own between Kansas City and Topeka, the capital of Kansas, the same to be continued during the legislative session at the latter city. This was a dash in advance of any paper in the United States. The New York *Herald* had its fast Sunday newspaper train, and the Chicago *Times* had one which it run between that city and Milwaukee once a week. But the Kansas City *TIMES*, a paper which had come into existence years after the reputation of both the former had been established, conceived the idea of running a fast newspaper train of its own, at its own expense, daily, between its city and the capital of Kansas. The illustration which is embodied in this article will probably convey a more accurate idea of this train than language can do. The first trip was made January 11, 1876, and it continued to run consecutively for fifty-five successive days. The time card was so arranged that the *TIMES* arrived in Topeka and was delivered there—as it was at all intermediate points—by early breakfast and many hours in advance of the regular mail. Returning, the train brought back the full legislative proceedings of the day, thus giving the readers of the section where the *TIMES* circulated on the following morning a full and carefully prepared account of the proceedings of the Legislature.

This extraordinary movement on the part of the managers of the *TIMES* eclipsed every former attempt at enterprise by the papers of the country, and proved conclusively, if the fact had ever been doubted, that the *TIMES* was so successfully established that it had moved far beyond the line which bounds the existence of ordinary journalism. If the manmoth review had caused a flutter, the fast newspaper train had created a furore, and for weeks after the train had commenced its runs the press of the entire West and many of the papers of the East and South were munificent in their awards of praise to the enterprise of the Kansas City *TIMES*. This was continued until the encomiums reached a bulk equal to ten columns of leaded minion type of the paper. During the entire session of the Legislature not a delay or accident occurred, and on the day of adjournment a free excursion, consisting of ten coaches, to the Kansas Capitol, was given by the managers of the *TIMES*. To this were invited the city officials of Kansas City, prominent citizens, and the press of Missouri and Kansas.

The expense of the newspaper train was borne by the *TIMES* alone, and amounted in the aggregate to more than the value of an ordinary West newspaper.

## RESULTS OF ITS ENTERPRISE.

To show how the enterprise was appreciated, and the additional interest taken in a paper of such energy elsewhere, the circulation was argument such an enormous extent that the press facilities were unable to supply the demand in time for the various out-going trains. There was no delay in meeting this emergency. The want was seen and felt, and in due time a new two-cylinder Hoe press was purchased and placed in position, being the first and only one used by any newspaper between St. Louis and San Francisco. This enterprise was again heralded by the press of the country, and another laurel was twined about the most enterprising newspaper west of Chicago.

## THE LEADING JOURNAL OF THE "NEW WEST."

Thus in five years, with capital, determination, unexampled spirit and appreciated ability, the Kansas City *TIMES* has become a newspaper of national reputation, a mark—with due deference to the press of its section—not achieved by any between St. Louis and San Francisco. Having reached this point, there can be no retrograde. In its course there has been no failure. Every adventure

thus far has been attended with all of the elements of increase. It stands to-day the only recognized first-class daily in its city, with a working force on the same plan as those of the great dailies of the larger cities. The leading Democratic organ of its own State, though not published in the State's metropolis. The great newspaper of the State of Kansas, and of that vast fertile region known as the "New West," and the first in every respect beyond the Mississippi river, its circulation extending into the Territories and penetrating the leading sections of Texas.

This brief review of the Kansas City TIMES makes its own showing. It has not a parallel in the annals of journalism, and establishes the reputation, and rivets it securely, that it is the only great newspaper conducted on a metropolitan plan west of the metropolis of its own State.

---

## THE PORTLAND TRANSCRIPT.

---

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

---

The Portland (Me.) TRANSCRIPT, a weekly literary and family journal, was started in April, 1836, by Charles P. Isley, who had the editorial management of it for about ten years. In 1848 it came into the hands of Erastus E. Gould and Edward H. Elwell, the latter assuming its editorial management. In consequence of ill health Mr. Gould retired from the firm in 1856, and the paper has since been published by Mr. Elwell and Messrs. Samuel T. and Charles W. Pickard, under the firm name of Elwell, Pickard & Co. Mr. Elwell has had an unbroken editorial connection with it for nearly twenty-eight years, Mr. Samuel T. Pickard has been connected with its management for twenty-three years, and Mr. Charles W. Pickard for sixteen years. From the first the TRANSCRIPT has maintained a high position as a first-class literary weekly. Among its contributors are many who have made a name in the literary world, and are now valued contributors to the first periodicals of the day. It has reached a well-deserved rank among family papers, as much by its high moral tone as by the excellence of its original and carefully selected matter. In addition to its original stories, sketches, essays, poems and reviews, it gives a condensed summary of the news of the State and the county, as well as market reports and commercial reviews. Faithful to good principles and the best interests of the State, it is received and appreciated by thousands of families, to whom it is a most valuable auxiliary in the education of the rising generation; giving tone and vigor to the essential elements which are the bulwarks of the country. In the course of its history of forty years it has absorbed a considerable number of other journals which ran well for a season, and now stands upon a consolidated basis as wide as the limits of our country. Its subscribers are found in every State in the Union, and its subscription list has reached a point surpassing any other in the State by thousands. It has a limited space devoted to advertisements, and its great circulation makes it the best possible medium for business men desiring to attract attention. It has the best and most convenient newspaper office in the city, where its publishers are always pleased to receive their friends.

# THE ARGUS, ALBANY, N. Y.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

For more than sixty years the Albany ARGUS has held a prominent place among the most eminent and leading journals of the country. It was founded January 26, 1813, by Jesse Buel, a man of culture and practical business training. Although Albany was then, as now, the capital of New York, its population was less than the last census gives to the smallest of the twenty-four cities of the State. The paper, however, was from the start a recognized power in the country. It gave a vigorous and cordial support to the war then raging between the United States and Great Britain, and did all in its power to strengthen and uphold the Administration of President Madison. Its patriotic course in this and other respects secured for it a strong hold upon the public confidence.

Mr. Buel conducted the paper until 1820, when it passed into the hands of Moses I. Cantine (a brother-in-law of Martin Van Buren) and Isaac Q. Leake. Three years afterwards Mr. Cantine died, and its proprietorship experienced another change. It was this circumstance that brought Edwin Croswell to Albany. He had for some years conducted a weekly paper in Catskill, Greene county, and being a former neighbor of Mr. Cantine he came to Albany to attend his funeral. Before returning home he was offered the editorship of the ARGUS. He accepted, purchased the interest held by the Cantine estate, and the ARGUS was launched upon a career of increased prosperity. This was in the winter of 1823. Mr. Leake soon afterwards retired, leaving Mr. Croswell the sole owner. Like his predecessors, Messrs. Buel and Cantine, Mr. Croswell was made State printer. The ARGUS was started as a semi-weekly, and was so published until October 18, 1825, when it made its appearance as a daily morning paper—a stretch of enterprise at that time, but a step which was warranted by the subsequent success it secured. From this time the ARGUS assumed a character and position not before accorded to it. Martin Van Buren, Silas Wright, William L. Marcy, and other statesmen, who afterwards wielded great power in the country, were just forcing their way to the front rank of national politics. The ARGUS was the organ of this new element of political power, and when it spoke there was meaning and significance in every line and sentence. This combination soon became known far and wide as the "Albany Regency." In the course of a few years the men composing it reached the highest places in the National and State governments.

In those days the three pre-eminently great Democratic newspapers of the country were the Albany ARGUS, the Washington *Globe* and the Richmond *Enquirer*—Croswell, Blair, and Ritchie. Whatever party programme was agreed upon by this triumvirate, it were needless to oppose. They were strong with their party and with the country. Years of continued success and prosperity furnished evidence of their wisdom and ability. During all those years the ARGUS made a record for itself which can be contemplated with unvarying satisfaction. It advocated and supported the leading measures of the Administrations of the government to which men now of all parties revert with pride—the Administrations of Madison, Monroe, Jackson, Van Buren, and Polk.

On the 19th of April, 1854, Mr. Croswell retired from the paper, having had the editorial management of it for a period of thirty years. He was succeeded by Sherman Croswell. In 1855 this gentleman was succeeded by Calvert Comstock, and in 1856 the *Atlas* and ARGUS were united, and Calvert Comstock and William Cassidy became editors and proprietors. In 1865 Mr. Comstock retired on account of impaired health, and the ARGUS COMPANY was organized, William Cassidy being President and editor-in-chief, and Daniel Manning and J. Wesley Smith associates. In January, 1873, Mr. Cassidy died in the midst of his editorial

labors. His career is fresh in the minds of the thousands who were accustomed to watch for his brilliant articles. His style was peculiarly his own—eloquent, original, and sparkling. Mr. Manning succeeded Mr. Cassidy. The present owners of the ARGUS are Daniel Manning, Mrs. William Cassidy, J. Wesley Smith, and William H. Johnson.

At no time in its history has the circulation of the ARGUS been so large as at present, or its prospects brighter for a long and prosperous career. As in its past history, so it is now the recognized exponent of democratic principles and democratic policy.

The ARGUS has three editions—Daily, Semi-Weekly, and Weekly. Its patrons are to be found in every section of the country, and are rapidly increasing, thus inviting the patronage of advertisers and business men. Its market reports are made a specialty, and are unsurpassed for completeness and accuracy.

THE ARGUS BUILDING.

The ARGUS building is located on the corner of Broadway and Beaver street. The structure has a front of forty-five feet on Broadway, eighty-five feet on Beaver street, and is five stories high. The entire building is occupied by the extensive printing establishment of the ARGUS COMPANY. The building is supplied with elevators operated by steam, and possesses all the accommodations for conducting a great newspaper. It has recently been greatly enlarged and improved. It occupies a site which is one of the most attractive in the city. Located on Broadway, just below its junction with State street, it commands a complete view of Broadway to the Delavan House on the north, and to the steamboat landing on the south. The new post-office in course of erection by the Federal Government is located within twenty rods, and in full view of the ARGUS building.

The terms of the ARGUS are: Daily, \$10 per annum; Semi-Weekly, \$3 per annum; Weekly, \$1 50 per annum. The usual reduction made to clubs.

# "THE WORLD," NEW YORK.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

"THE WORLD" BUILDING.

THE WORLD building is on the site of the old brick church, and its proximity to the new Post-office and its situation at the angle of Park Row and Beekman street, with entrances to the publication office on both streets, give it the most eligible newspaper location on Printing House square.

This great journal was established June 14, 1860, and announced in its first issue that it would be "independent in politics." In July, 1861, it united with itself the New York *Courier and Enquirer*, one of the oldest and most respectable journals in the city. Enormous sums of money were expended, but THE WORLD was not a success till it was purchased, April 12, 1862, by Mr. Manton Marble who had been connected with it since its establishment. He at once made it a Democratic journal, devoted to the time-honored principles of "Hard money, free trade, and home rule." He parted with a portion of the stock of the paper to influential Democratic associates, retaining, however, a controlling interest and always having exclusive management, with no interference, of every department. In January, 1864, he bought back the shares he had sold, and so became the sole proprietor and editor of the paper.

Manton Marble is a born journalist. Almost immediately after his graduation at Rochester University, in 1855, he went to Boston, where he joined the staff of the *Journal*, and soon afterward became the responsible editor of the Boston *Traveller*. In 1858 he joined the staff of the New York

*Evening Post*, to which he was attracted by its free-trade principles, and remained in that position till *THE WORLD* was established. He was but twenty-seven years old when he assumed the entire control of *THE WORLD*, which, under his management, at once became a powerful journal, and has long since been generally conceded to be "the leading Democratic journal in the Union."

Mr. Marble's high standard of professional duty and professional accomplishments enabled him from the first to draw around him a staff surpassed by that of no other journal in the country. When he assumed the management of the *WORLD* large sums had been sunk in the enterprise, and it was regarded by many persons as past redemption. He inspired his associates with his confidence in its future, boldly increased its outlays for news, enlarged and reorganized its working force in all departments, poured into it all the resources of scholarship and ability at his command, and in a very short time compelled the public to recognize its power and authority, both as an organ of opinion and a vehicle of information on all subjects of real and vital interest to the community. The verdict of the press and public of the United States has long ago been recorded, and is but echoed by the latest foreign critic of our metropolitan journalism, who has recently said of the *WORLD* in the columns of the leading conservative journal of Great Britain that "it has the ablest, wittiest and most scholarly editorial writers in the city of New York. Its money article," adds the same observer, "is confessedly the ablest in any of the city journals. It wants free trade, hard money and home rule; and is the organ of the Northern Democrats, with principles broad enough for all sections."

In addition to its daily, semi-weekly, and weekly editions, *THE WORLD* publishes a special Sunday paper. The first number was issued April 5, 1868, and it at once attained great popularity from its introduction of features which the pressure of news and advertisements on week days did not admit. It is, of course, a regular continuance of the daily issue; but the Sunday issue is greater by some thousands than that of any other day, from the fact that there are thousands who buy and read a paper on no other day, and the *SUNDAY WORLD* is the most popular of all the Sunday papers. Among its salient specialties are always delightful dramatic feuilletons and entertaining communications from regular contributors. The Sunday editorials, too, are generally non-political and devoted to social topics; and with all, there is a vast amount of most interesting miscellaneous matter.

*THE WEEKLY WORLD*, at the astonishing low price of one dollar a year, with extra inducements to clubs, is unquestionably the best and cheapest newspaper in the United States. Instead of being, like many weekly issues of the metropolitan dailies, a hastily pitched-together jumble of matter standing on the galleys, it is a carefully and specially prepared journal, with its special editor and assistants, under supervision of the Chief, and is, in fact, totally distinct from the daily, in these respects—that the news of the week is largely rewritten and condensed so as to give all that is important from all parts of the world, and special articles, agricultural and industrial, together with elaborate market reports, prepared expressly for this issue, are presented in the *WEEKLY*, which do not appear in the daily at all. There is always a "good story" for family reading, either original or selected from the best English, or translated from French or German magazines, the publication of which, of course, would be impossible in the daily, with much miscellany, giving the family days of reading till the next issue arrives, thus making the always welcome Weekly, as used to be said of Sherman's poor man's plaster, "good for a week back." Of course, the very latest news, including all the important telegrams and cablegrams of the day of publication are given, with the latest markets and quotations. The most salient editorials of the week, presenting *THE WORLD*'s views on all important political issues, are also presented, thus widely extending its influence in the effort to break down corruption and to unite the Democrats and Conservatives in the coming Presidential struggle, which is to decide the future destinies of the Republic. Its admirably edited Grange department makes it an especial favorite with the farmers of the West. As long ago as June, 1868, and apropos of the arrival of delegates from all parts of the country to the National Democratic convention in New York, the New York correspon-

dent of the Boston *Courier* thus described the mere mechanical processes necessary to produce the issue of the WEEKLY WORLD.

\* \* \* "The city casually 'done,' that is surfacewise, in a day or two, the curiosity of the newly-arrived delegate centers upon Tammany Hall, now rapidly completing, Central Park, which never will be finished so long as grass grows and water runs, and the office of the 'great daily' which has furnished the political pabulum and literary and news record for himself and his family far away. Of the daily he knows and sees little. It is the peculiarity of the rural regions to be content with a good weekly paper, and the weekly issues of the great dailies in the city are generally more widely known, and are more a force necessarily from their larger circulation, than the daily issues of the same journals. Down to Printing House square comes our inquisitive Delegate to see how the paper that comes to him once a week as a guide, philosopher and friend is manufactured. Not specially to see how the brain work is done in the top stories of those lofty buildings, but how the paper is printed, folded, mailed, and forwarded, Let us push by the cords upon cords of bundled paper that always block the sidewalk here and there on the square, the assumed right of the publishers tacitly admitted, even by policemen, to be superior to the right of way, and push down into the bowels of THE WORLD. It is six o'clock on Tuesday night. At this hour the counting room above is almost deserted, and the cars centering at City Hall Park are rapidly depleting that part of the city, for business men and clerks are going home to dinner. But from the comparatively quiet street, down, deep down in the basement of THE WORLD building, two stories underground, we come upon a busy scene indeed. THE WEEKLY WORLD is just going to press. The steam engine is doing a driving business—that is, it is driving a ten-cylinder Hoe press, which, in turn, is driving at the rate of from thirty-two to thirty-six revolutions a minute, each revolution printing ten papers, or from three hundred and twenty to three hundred and sixty papers every minute. A foreman, assistant, ten feeders, oilers, lifters, and sundry other workers make this a lively corner in the huge cavern. But the engine drives also six folding machines, a man at each, each machine folding from 2,000 to 3,000 copies an hour, or an average say of 2,500 copies to each. From 6 p. m. till 12 m. runs press and folders, when the weekly rests and the daily goes to press. At 6½ o'clock next morning begins work on the weekly again, and press and folders run till 1 p. m., or about thirteen hours on this one issue. From the press room to the quite as busy bundling room, and here we find another foreman and twenty-four men who act as supplementary folders to the machines, folding an average of 600 copies each in an hour; and these with the bundlers, packers and baggers put up in packages of all sizes and in bags for the mail during the night and morning 135 bags, averaging 1,000 copies to the bag, or 135,000 copies for the twelve or thirteen hours' work. Delegate is astonished when he is told that the white paper for this single issue weighs about seven tons, would fill a room twenty feet square, and if pieced out sheet by sheet would extend a distance of about ninety-four miles."

This was written seven years ago, and is by no means an adequate description of the department at present. The largely increased circulation of all issues of THE WORLD, especially of the daily, have long ago necessitated the introduction of another gigantic Hoe press, so that both sides of the paper can now be printed simultaneously. Another and important advantage is that the paper can be put to press at a later hour, with later news, and yet catch the earliest mails, which is of especial importance to the daily morning issue. What is lost in the employment of a necessarily larger force is gained in time. All the latest machines for folding and mailing have been freely introduced, regardless of cost, and in all its appointments in this department THE WORLD office is thoroughly complete.

Since 1868 this establishment has annually issued the "THE WORLD ALMANAC," which is simply the most complete, concise, correct, and best Political Manual published in the United States.

# THE EVENING STAR, WASHINGTON CITY.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

In a greater degree perhaps than any newspaper in the country, THE WASHINGTON EVENING STAR is the exponent and representative of the interests of the city in which it is published. This has been its character from the beginning, and to this distinctive feature is largely due its present wide circulation and its high character as an advertising medium. Founded in 1852, it is by many years the oldest, as it is also the most popular and influential, of the many newspapers published at the National Capital. The policy of giving the closest attention to local interests which was adopted by its founders has not only been adhered to, but still farther developed by its present management, into whose hands the paper came, by purchase, in 1867. Not only this, however. Immediately on assuming control they determined to solve the problem of publishing a daily news and business journal, strongly local in character, so cheap as to be within the means of the poorest citizen, yet so wide in its scope, so high in its aims, and so full and complete in all its departments as to meet the exacting demands of those wishing to keep posted in the daily doings of the whole world. To this end the largest and best attainable force of editors, reporters and correspondents is constantly employed, the telegraph is freely and liberally used, and the fastest and most powerful printing machinery is called into service. The result is a daily newspaper which literally goes into every household in the District of Columbia. It has indeed been conclusively established that THE STAR has more than three times as many subscribers and more than five times as many readers as any other daily paper published in Washington. And not this alone. Its regular permanent subscription list is believed to be larger than that of any evening paper in the United States, no matter where published, while its circulation is, in proportion to the population of the city where printed and circulated, the largest and fullest possessed by any newspaper in the world. It follows, therefore, that within the territory covered by its circulation it has no rival, nor anything approaching an equal, as a means of reaching the public. It has, in fact, passed into a maxim that "Every body in the District of Columbia who can read, reads THE STAR, and every one who advertises at all advertises in its columns." Yet it must not be thought that its circulation and influence are only local. It has a wide distribution through the mails, and in addition to this every issue of the paper is carefully read by the throngs of strangers constantly visiting the National Capital on business or for pleasure, and who constitute in a very large degree the wealthy and purchasing population of the different States and Territories; so that, while its field is in a marked degree local, it is nevertheless in the best sense cosmopolitan and uncircumscribed in its sphere.

But perhaps the history of this remarkably successful and popular journal can best be epitomized by stating the suggestive facts that it commenced its career in 1852 with less than \$500 capital, was sold to its present proprietors for \$100,000 cash in 1867, and is now held to be worth not less than a quarter of a million dollars. These figures tell the story of patience, of sound judgment, of well-directed energy and enterprise, of independent action, of fair dealing, of defence of popular rights, and of strong hold in public esteem, more plainly than a whole volume of words. It is doubtful, indeed, whether the history of journalism anywhere in the world can show, in all respects, a parallel to it.

# THE HOUSEHOLD, BRATTLEBORO, VT.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The HOUSEHOLD has the honor of being the pioneer in its class of periodicals, it having been the first, and, for several years, the only journal published in the country entirely devoted to domestic affairs. It was founded in the belief that the literature previously furnished by the various "ladies magazines" and kindred publications, though occupying its appropriate sphere, and well-adapted to the needs of a large portion of its readers, was not such as to meet the requirements of those earnest working women who constitute so large a portion of the wives and daughters of our land, but that they needed something more practical in its nature, whose tendency should be to elevate that peculiar labor of caring for and managing the family, known by the general term of "house-work," from a mere drudgery to a science, and at the same time extend the sympathizing hand to those who have a longing to make their home an index, as it were, of their characters—a reaching out for an attractiveness of surroundings which, with much or little expenditure, according to their means, shall attract and retain their husbands and friends, educate and refine the boys growing from youth to manhood, and cultivate a love for the good, the beautiful and the true in the daughters of the household, and in this way to make home, however humble, the dearest place and the family the happiest people.

Such is the aim and purpose of the HOUSEHOLD, and the generous and appreciative patronage it has received may be taken as good evidence that the faith of its projectors was well founded, especially in view of the fact that unlike many, if not all of the successful journals of the present day, it was in no sense a child of fortune, either by birth or adoption. It is a well-known saying that "it takes a fortune to establish a paper," and the history of nearly every prominent periodical bears witness to its truth, they having been founded or assisted by capitalists who were enabled to bring to their aid all the resources that wealth can supply, and thus command success from the outset. On the other hand, the HOUSEHOLD was of humble origin, reared in penury and schooled in the hardships and privations incident to the life of a country printer, and it has won its way from obscurity to its present position solely by hard labor and indomitable perseverance. Starting in January, 1868, with a subscription list of *thirteen*, with no capital to sustain it, and but little experience in newspaper life to guide and direct its hazardous course, amid doubts and fears, gaining a little firmer foothold every year. it has fully solved the problem of success, has established itself upon a firm financial basis, and has to-day the largest circulation of any monthly published in New England. During this time it has twice been enlarged, four pages having been added to its original sixteen in the early part of 1869, the publisher having offered to make such an enlargement when the circulation of the journal should reach 12,000, and at the same time promised to make another and equal enlargement when the subscription list should number 20,000. The latter promise he was able to redeem with the commencement of the third volume, just two years from the time the first number of the paper was issued, and since that time it has contained twenty-four large and well-filled pages, making it considerably the largest dollar monthly issued from an American press.

Instead of being disposed of through newsdealers, as a large portion of most of the monthly publications are, the large edition of the HOUSEHOLD is mailed almost entirely from the publishing office, and fills nearly a hundred of Uncle Sam's large mail sacks per month. These are mailed from the middle to the last of the month preceeding the date of issue, according to their destination, those having the farthest to go taking the earliest trains, which enables the

whole edition to reach its readers on time and with the regularity of clock work. From the mailing table the sacks, weighed by the post-office clerks and duly labelled, are delivered to the mail agents and by them forwarded to every State and Territory in the Union, besides a large number sent to foreign countries, from which it will be seen that the *HOUSEHOLD* is not a local paper with a circumscribed field and influence, but a cosmopolitan journal, adapted to all sections of the country, and is pretty generally found wherever there is a representative of the class to whose interests it is devoted. Its subscribers are found in nearly every county in the Northern and Western States, while in the far South and on the Pacific Coast its patrons are already numbered by the thousands. It has a large and efficient corps of agents, numbering many hundreds, scattered throughout the country, many of whom have canvassed for it from its commencement, and it is a remarkable fact, and one, it is believed, unparalleled in the history of journalism, that since the first number was issued not a week-day has passed without bringing some addition to its subscription list.

A good idea of the character and scope of the *HOUSEHOLD* may be derived from a brief review of the special departments into which it is arranged. There are ten in number, corresponding to the apartments of a dwelling, as follows: The Veranda, the Drawing Room, the Conservatory, the Dressing Room, the Nursery, the Dining Room, the Dispensary, the Library, the Kitchen, and the Parlor.

In the Veranda are given the architectural notes, hints for out-door work, while a lookout is kept upon the surroundings of the dwelling, and assistance given toward beautifying the premises. The Drawing Room has articles on the art of furnishing the house, care of furniture, etiquette, and interior decorations. In the Conservatory are gathered the pets of the family in pots, cages and aquarium, and information given upon all matters pertaining to their treatment. The Dressing Room contains a brief review of the fashions, toilet recipes and practical suggestions upon needle-work and kindred topics. The Nursery is devoted to the care and management of infants and children, and furnishes the little folks with an assortment of entertaining reading and puzzle work. The Dining Room is furnished with hints upon table etiquette, the analysis of food, table talk, and a column of jokes and funnygraphs as a "dessert." The sanitary articles of the Dispensary are from some of the best writers in the country, and abound in valuable information concerning the care of the sick and the preservation of health. In the Library literary and educational topics are freely discussed, and there are also notices and reviews of books and current publications, and a page of original music in every issue; as the kitchen is generally the most important room in the house, so here the Kitchen is a large and well filled department, where contributions are received each month from many of the most successful housekeepers in all sections of the country upon the various subjects that please or perplex their younger and less experienced sisters, with a large number of original and well-tried cooking recipes, a column of "Questions and Answers" upon all subjects pertaining to home life and domestic economy, a fund of practical information under the title of "Chats in the Kitchen," and a page of "Letters" from the Household Board, which is not surpassed in interest by any other feature of the paper; last, but not least, is the Parlor, in which is a choice collection of original and selected stories, miscellaneous reading, poetry, etc. In short, the *HOUSEHOLD* is designed to give aid and sympathy to the housekeeper in every department of labor to which she may be called, and especially in her efforts to make home beautiful and attractive. It shows how this may be done by the simple taste and skill of the housewife in a thousand devices and products of domestic ingenuity for the comfort of the family and the adornment of the dwelling, while it labors to promote the sweetness and grace of true womanhood in its presiding genius.

As an advertising medium the *HOUSEHOLD* ranks among the first, being especially valuable to all who desire to attract the attention of housekeepers and heads of families. Manufacturers and dealers in articles of domestic use, who have used its columns for years, frequently say that but few papers equal and none excel it as a means of extending their business. As an illustration of the estimation in which it is held by advertisers who have given it a trial, the

following extract from a business letter from Messrs. I. L. Cragin & Co., of Philadelphia, the well-known manufacturers of Dobbin's Electric Soaps, may be appropriately given here: "We are hearing from the HOUSEHOLD from all parts of the United States, and don't think we shall ever cease to patronize its advertising columns. We are in 1,500 papers, and it seems as though half of the letters we get speak of the HOUSEHOLD." Many others of like import might be given. One reason of its popularity among advertisers is to be found in the fact that the limited number of advertisements admitted—not exceeding four pages—enables the publisher to sift out all the doubtful ones, and so virtually endorse such as appear in its columns, and this being well known to the readers, they feel safe in giving their patronage to any firm whose responsibility is thus vouched for, which makes the space occupied highly profitable to its advertising patrons. The utmost care is taken to exclude everything of a questionable character, and nothing but what is believed to be in every respect entirely unexceptionable is permitted to appear in its columns. The fine quality of the paper upon which it is printed, its clear type and good press-work, give to the advertisements that peculiar prominence characteristic of a well-printed page, causing them to be easily seen and read. Then, too, unlike the majority of newspapers, which are hastily read and soon forgotten, it is generally preserved through the entire month for family reading, and then quite frequently laid away to be bound at the close of the volume and kept for future reference, so that it often occurs that advertisements are replied to several years after their first appearance. The subscription price of the HOUSEHOLD is one dollar per year, to which has recently been added ten cents to cover the postage now prepaid by the publisher.

# THE IRON AGE, NEW YORK.

THE LARGEST NEWSPAPER IN THE WORLD.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

During the past twelve or fifteen years trade journalism has experienced a marked and beneficial change. Previous to that time the commercial journal was expected to be in itself the representative of all departments of commerce and industry. When business men were content with a few brief words of comment on the condition of the markets which interested them, and were satisfied if they found them after searching through column after column of matter which had for them only a remote and general interest, the commercial newspaper of the olden time filled a want. When business became more speculative, profits smaller, and competition so close that early and exact information on all subjects of interest was of value to merchants and business men, the general commercial journals were unable to meet the demand. Their field was so extensive that they could only cover it in a superficial way; their reporters and editors, having to divide their attention among a number of markets, could not closely follow all the changes in, or familiarize themselves with all the conditions affecting each. The necessity for fuller and more exact information led to the establishment of trade journals devoted to some special business or industry, and while there are still some general commercial journals, there are few trades or industries which are not represented by class journals, whose columns are devoted exclusively to the literature, statistics and prices current of the trades and markets which constitute their special fields.

Among the first of the special trade journals was THE IRON AGE. Established in 1855, it is the oldest newspaper in the world devoted to Iron, Hardware and the Metal Trades. Its original title was the *Hardwareman's Newspaper*, but in 1859 it was changed to THE IRON AGE. The next oldest journal of its class is the *Ironmonger* of London, established in 1859.

THE IRON AGE early assumed, and has since maintained, a first position in American trade journalism, and for several years has been the largest newspaper published in this or any country. It consists of forty pages, 11½x17 inches, well printed on good paper. Each number is carefully indexed for reading matter and advertisements; and each copy is folded, stitched and cut. The area of printed surface in each weekly number measures 54 11-36 square feet, being considerably larger than any of the popular monthly magazines. Beside the weekly edition, there are semi-monthly and monthly editions.

The policy of the editorial management of THE IRON AGE has always been to give each issue an interest and value for all classes of its readers. As a trade journal it was the first to give thorough, exhaustive and exact reports of the markets it represented, and in carrying out this plan it has practically revolutionized commercial journalism. To obtain the information needed was at first very difficult and always very costly. To make its reports complete and accurate it was necessary to employ as reporters men of business experience, who could at any time command large salaries as salesmen; correspondents had to be secured at home and abroad, and branch offices, under the management of accomplished journalists, have been established in Philadelphia and Pittsburgh.

Among the features of THE IRON AGE trade report may be mentioned, weekly telegrams from London, a thorough and exhaustive report on the condition and changes of price in the American Hardware market, careful and accurate reports of the Iron and Metal market in the principal cities of the United States, and condensed translations from the latest exchanges, trade circulars and private advices from the principal metal markets of all countries of the world.

These are features never before combined in a newspaper trade report, and there are few commercial journals in the world which could afford the large annual expenditure involved in the maintenance of such a system.

In its editorial and reading columns THE IRON AGE possesses a character which is distinctively national. It is valuable as a record of current progress in metallurgy, mechanics, engineering and the useful arts, and is conspicuous for the extent, variety, and interest of its reading matter. In its editorial columns all questions of current interest to the iron, steel, metal and hardware trades are calmly and intelligently discussed, and no space is wasted in acrimonious and unprofitable disputation with other journals. Its acknowledged position at the head of American commercial and technical journals has been gained and retained by an unwavering adherence to the policy to making a paper as valuable and useful as possible, without regard to cost or trouble. The result has been the growth of a circulation larger than that of any other trade journal in this country, or, we believe, in the world, and a large and firmly-established prosperity, which the commercial and financial troubles of the past three years have not even menaced.

In the amount of its advertising THE IRON AGE is a curiosity in journalism. This averages from 130 to 150 columns, and in a number containing 48 pages it has reached very nearly 200 columns. Its advertising pages are an illustrated trade directory of exceptional interest. This great amount of advertising is due to the extensive circulation of the paper and the fact that its rates of advertising have always been exceptionally low, considering its circulation and influence. In consequence of this policy, THE IRON AGE has gained a constituency of advertisers who find it to their interest to keep their advertisements in the paper without interruption.

THE IRON AGE is published every Thursday at 10 Warren street, New York, by David Williams, publisher and proprietor. James C. Eayles has been its editor since 1871, aided by a well-selected staff of assistants and contributors. The Western office, established at No. 14 Fifth avenue, Pittsburgh, is under the management of Joseph M. Weeks, formerly editor of the *American Manufacturer* of that city, who is also associate editor, with especial charge of Western iron trade news. The Philadelphia office is at No. 220 South Fourth street, under the management of Thomas Hobson.

# THE COURIER-JOURNAL, LOUISVILLE.

A REPRESENTATIVE, INDEPENDENT NEWSPAPER OF THE SOUTH AND,  
SOUTHWEST.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

COURIER-JOURNAL BUILDING.

The *COURIER-JOURNAL* of Louisville, Ky., is an anomaly in American journalism. Issued from a city of the sixth class, it is a journal of the first class. No newspaper in the country has so extended a range of circulation; no other is so generally and widely quoted. It is both cosmopolitan and provincial, showing in its make-up an unusual versatility of editing. Its news is collated in the most minute and painstaking way, whilst its humor, paragraphic, and otherwise, is celebrated and popular. It is thoroughly representative of the South and Southwest, and has come to be considered a tolerably sure indicator of public opinion in those sections.

The *COURIER-JOURNAL* is the offspring of three newspapers which flourished in Louisville from 1830 to 1868, to wit: the *Journal*, established by George D. Prentice on the 24th of November, 1830; the *Courier*, established by Walter N. Haldeman June 3, 1844, and the *Democrat*, established by John H. Harney about the same time. These three newspapers, competing with each other for nearly twenty-five years, experienced the varying fortunes of the city and the time; but were in the main successful. On the 8th of November, 1868, Henry Watterson having succeeded George D. Prentice in the management of the *Journal*, made an arrangement with Mr. Haldeman for a consolidation. The union effected, the two journalists purchased the *Democrat*, throwing the three into one under the title of the *COURIER-JOURNAL*.

In this way they secured the exclusive telegraphic franchise for the city of Louisville, embracing a population of a hundred and fifty thousand. This is the only instance of the kind on record, and will partly account for the unexampled prosperity of the enterprise so inaugurated; for it enabled Messrs. Haldeman and Watterson to compete with the journals of Chicago, St. Louis, and Cincinnati, cities very much larger than Louisville. They improved their opportunity with energy and vigor. The *COURIER-JOURNAL* has now a larger circulation in Kentucky, Indiana, Tennessee, Mississippi, Alabama, Georgia, Arkansas, and Texas than any of the journals of those States. It is sent into every State and Territory of the Union, and may be found upon the files of more libraries, boards of trade, literary societies, mercantile exchanges, chambers of commerce, Young Men's Christian Associations, hotels and club houses than any of its contemporaries in the Southwest.

The *COURIER-JOURNAL* has just erected, and now occupies, a newspaper building in all respects the handsomest and most commodious in the world. This building, which stands upon the corner of Fourth avenue and Green street, the most conspicuous corner in the city of Louisville, has a Fourth avenue front of 165 feet by a depth of 95 feet, is five stories high, with a Mansard roof, and is furnished throughout in a style of great magnificence. It is constructed of stone and pressed brick, and is of rare architectural beauty. Its principal facade is ornamented by a marble statue of George D. Prentice, the founder of the *Journal*. The composing, editorial, and press rooms are capacious and elegant, whilst its business is transacted in a counting-room unsurpassed in size and beauty.

In politics the *COURIER-JOURNAL* has always been Democratic, but has led the liberal and advanced elements of that party, and is at all times thoroughly independent.

The *COURIER-JOURNAL* is a folio sheet 30x48 inches in size. Its forms are stereotyped, and the paper is printed on a double Bullock press, capable of throwing off upwards of 20,000 perfect papers per hour.

The new building and office is supplied with all modern conveniences and improvements, such as freight and passenger elevators, steam engines, steam pumps, extinguishers, fire protectors and folding machines. Indeed, everything has been provided to render the *COURIER-JOURNAL* the finest, most complete, and convenient printing establishment not only in the United States, but in the world.

#### TERMS:

DAILY <i>COURIER-JOURNAL</i> .....	\$12 00 a year.
SUNDAY <i>COURIER-JOURNAL</i> .....	2 00 a year.
WEEKLY <i>COURIER-JOURNAL</i> .....	2 00 a year.
WEEKLY <i>COURIER-JOURNAL</i> , 10 clubs, \$1 70, \$1 60, and	1 50 a year.

Advertising in daily paper, 10 and 12½ cents per line, and in weekly 40 cents per line, each insertion.

The *COURIER-JOURNAL* has a special office in New York, No. 37 *Tribune* Building, under the management of Mr. E. B. MACK, for the convenience and accommodation of advertisers.

# THE INTER-OCEAN, CHICAGO.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

Westward the course of journalism as well as empire takes its way. Yesterday the great dailies of the country belonged to New York alone. To-day Chicago contests and divides the honor, and crowds its rival over the Eastern slope of the Alleghanies.

It is about six years since Chicago began a newspaper rivalry with New York, but it was not until THE INTER OCEAN was founded, in 1872, that a serious attempt was made to establish in the West a

## HIGH-TONED POLITICAL AND LITERARY NEWSPAPER.

Before that the journals of Chicago were exclusively newspapers. Their opinions were little regarded, and their literary character partook much of the frontier order; the rough and sensational, instead of the refined and æsthetic, were sought after.

It was doubted whether a newspaper of a better character could prosper in the West; but that doubt is removed. From its inception THE INTER-OCEAN appealed to the loftier instincts of the people, and from the start met with generous encouragement. It has never been found in the slums, nor is it hawked about in the disreputable quarters of the Western metropolis, but goes to the homes of more reading and thinking people than any other journal in America.

## IN CITY AND COUNTRY ALIKE

it is recognized as the organ of respectability *par excellence*. To read THE INTER-OCEAN is *prima facie* proof of intelligence, and no surer sign of cultivation can be given than to be known as a regular subscriber to the great literary monitor of the Northwest.

The circulation of THE INTER-OCEAN has increased with a steady rapidity, astonishing even its most sanguine friends. Its printing facilities, large at first, have been from time to time increased, and in March of the present year its presses, including one immense eight-cylinder Hoe, were still found inadequate, and contracts were closed with the Bullock Printing Press Company for two of their new perfecting presses of the latest pattern, each capable of printing 13,000 perfect sheets per hour.

As an indication of the magnitude of the present circulation of the paper, it is only necessary to refer to the indubitable evidence furnished by the post-office returns. Postage, by law, must be paid in advance at the office of publication, and from this official source the actual facts regarding the circulation of any newspaper through the mails can be obtained. The evidence thus on file shows that during the year 1875 THE INTER-OCEAN

PAID IN POSTAGE \$13,029.84—

a sum equal to that paid by all the other political journals in Chicago combined, and absolutely unapproached, with one exception, by any other newspaper in the United States.

This enormous circulation grows less wonderful when we take into account the character of the people who look to Chicago for their newspaper literature. Outside of a narrow strip of New England, there is not in the Union, according to population, so large a percentage of reading and thinking people as inhabit the nine States having Chicago for a commercial and financial centre. That among so many millions of thoughtful, industrious, and prosperous people THE INTER-OCEAN should gain an extended foothold is not strange. The paper is but

the reflex of their own thoughts and sentiments, and has become endeared to the people of the West as a part of themselves.

Though Republican in politics,

#### THE INTER-OCEAN IS FRANK AND OUTSPOKEN

on questions of public policy, and its bold course in this respect has made its name familiar throughout the country. On the Southern reconstruction, the railway problem, and the currency question, it has been a law unto itself. Beginning the discussion of each of these subjects alone, it built them up into great living national issues, commanding the attention of the entire people and first in the country.

The flow of subscribers that set in alone from the West, ere long had its counterpart from the East and South also, until now the tide has swept the whole continent and THE INTER-OCEAN embraces a constituency national in extent and first in wealth and culture.

A year or so ago a distinguished bishop of the Methodist Episcopal Church, writing to the *New York Independent*, said: "THE INTER-OCEAN is the clearest wisest, and strongest of American dailies. It is the true and almost only successor of the great *New York Tribune* of ante-bellum fame and power. When it circulates Eastward, as the Greeley journal of yesterday went Westward, we shall feel and follow our way out of the lowness and guiltiness and cowardice and crime that now nationally envelop and fester us."

The growing strength of THE INTER-OCEAN in the East shows that the day hoped for by the Bishop may not be far away.

#### A PROMINENT AND EXCELLENT FEATURE

of the INTER-OCEAN is its *reliability*. This is so marked as to be frequently observable in an amusing way. The past year has been full of surprises and scandalous exposures. When any of these have been made public the demand for THE INTER-OCEAN has been most marked and extensive. The readers of other newspapers have seemed to turn with one accord to its columns for a verification of such reports. The inquiry on all sides has been, "What does THE INTER-OCEAN say?" and by its silence, contradiction, or confirmation has the reliability or untrustworthy character of such rumors been generally judged.

#### CHICAGO IS A NATURAL ENTREPOT OF NEWS.

More than 21,000 miles of railroad connect it with the surrounding territory, and "Chicago" appears in the corporate name of fifty railways. Twenty lines radiate from the city, and more than one-half of the entire population of the Union can be reached in twenty-four hours from this great INTER-OCEANIC metropolis.

Gradually but surely the newspapers of the Atlantic seaboard are being driven back into their natural local boundries, while the great central organs of the West push their way North, and South, and East in simultaneous accord.

The star that shines ever so brilliantly on the verge of a cycloid pales when the centre is reached, and fades away entirely at the antipodean boundary; but the centric sun distributes its radiance equally, and sheds light upon the East and the West alike.

The West, so-called, is now the center of the Union and, with its vast population, controls the destinies of the Republic. There is but one West, and Chicago is its capital. There is only one Chicago, and THE INTER-OCEAN is its prophet.

# THE CONGREGATIONALIST, BOSTON.

REPRESENTING THE OLDEST RELIGIOUS NEWSPAPER IN THE WORLD.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

In January of the year 1816, Nathaniel Willis, after long labor to prepare the way, published the first number of the Boston *Recorder*. He always claimed

THE CONGREGATIONALIST BUILDING.

that it was the first effort ever successfully made to establish a weekly newspaper upon a distinctively religious basis, and the claim has been allowed by impartial history. In May, 1849, Deacon Galen James started the CONGREGATIONALIST in Boston, to meet the views of a school of Congregationalists who were not satisfied with then existing journals. In 1867—following the spirit of the Boston Council of 1865, and falling in with the tendency to harmonize into one all members of the great family of the spiritual descendants of the Pilgrims—the *Recorder* and CONGREGATIONALIST were united under the editorship of Rev. Henry M. Dexter, D. D.; and from that time to the present the resultant journal has had a recognized standing at the head of Congregational newspapers, not merely in point of circulation, but of general ability.

Its proprietors, while holding it steadily to the doctrinal standards of the Congregational Churches, and while aiming to give it a special value in all its relations to polity and to practical Christianity, have sought also to make it, what it is conceded to be—

## A FAVORITE FAMILY PAPER.

By a liberal expenditure it has attached to itself, as a staff of regular contributors, a large number of the best religious writers, while the learning, force, aptness, and general value of its editorials, the marked candor and ability of its book reviews, and the unsurpassed variety and freshness of its religious news, entitle it to hold and increase the wide popularity which it has gained. W. L. Greene, C. A. Richardson and H. M. Dexter, proprietors. Terms, \$3 a year, in advance. Address W. L. Greene & Co., Congregational Building, No. 1 Somerset street, Boston, Mass.

# "THE YOUTH'S COMPANION," BOSTON.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

## FIRST YOUTH'S PAPER.

The YOUTH'S COMPANION is the pioneer paper in the juvenile literature of our own country, and the oldest weekly paper for young people in the world. It is now forty-nine years of age, and in a few months will celebrate its semi-centennial anniversary. It was commenced in May, 1827, by NATHANIEL WILLIS, of Boston, the father of N. P. Willis, the poet, who also founded the *Eastern Argus* and the *Boston Recorder*.

## ORIGIN.

The early history of the paper is novel and interesting, and illustrates the growth of an idea. Mr. Willis having been accustomed to relate stories to his own children, as a reward for committing to memory the lessons he assigned them, was led to see the value of such literature in developing the thought and character of the young. It suggested to him the plan of having a Children's Department in the *Boston Recorder*. He acted upon the suggestion, the new feature of the paper became popular and successful, and it has been since adopted by nearly all religious journals.

The stories for young people in the *Recorder* were so eagerly sought for, that Mr. Willis determined to start what at that time seemed a very novel enterprise—a paper exclusively for the young. A specimen number was issued in May, 1827, a sufficient number of subscribers was obtained to warrant its continuance, and, in the month of June following the first weekly paper for young people began its successful career.

The sheet was a very small one, hardly larger than an old-fashioned pane of glass, the type was large and coarse, and the single picture it contained would now bring a smile to the face of the most inartistic reader. But, though coarse in appearance, its literary material, like the old *N. E. Family Magazine*, was usually of a high order, indicating excellent taste and judgment. It attained a circulation of about 5,000 copies.

## FORD & OLMSTEAD.

For many years the COMPANION published under its name the information in one long line, that it was issued "by Nathaniel Willis, weekly, at No. 11 Cornhill, office of the *Boston Recorder*, at one dollar a year." In 1857 Mr. WILLIS' health having become impaired by advanced age, the paper was purchased by Messrs. Ford and Olmstead, proprietors of the *Watchman and Reflector*, and published under the firm of Olmstead & Co. The editing of it passed into the hands of Mr. D. S. Ford, who is now its editor, and since the year 1867 has been its sole proprietor. Mr. Willis, its founder, died in 1870, in the 91st year of his age.

## ENLARGEMENT AND GROWTH.

The little paper had made for itself a good reputation and character. Its new editor enlarged it in size, and aimed to give it a higher literary value. Its articles took a wider range, very engaging writers were secured, and the circulation under this impetus began to rapidly increase. In a few years its subscription list grew from 5,000 to 40,000 names.

## RAPID INCREASE.

The increase in resources was followed by a corresponding increase in the literary value of its contents. It became the aim of its editor, after the model of *Chambers' Journal*, to furnish the best reading at a comparatively small cost. The paper was again enlarged, new literary departments were formed, emi-

nent contributors were secured, and its editorials were prepared by the most capable city editors. In 1870 its subscription list reached 70,000.

#### A FAMILY PAPER.

From about this time the character of the paper underwent a change, and it became both a literary journal for the young and for the family. Its stories adapted themselves to the tastes of a larger audience of readers; its articles on current topics were so prepared as to be interesting to the cultivated and critical as well as to the young. The wants of the family from the youngest to the oldest were considered, and the purest and the most entertaining writers were employed to meet these wants.

#### ONE HUNDRED AND FORTY THOUSAND SUBSCRIBERS.

Nothing is so successful as success, or more trustworthily than success gained by a well-directed purpose and a generous and liberal aim.

is now a thirty-two column paper, and has a circulation of 140,000 copies weekly. Many of the parents who subscribe for it for their families to-day were readers of it when they themselves were boys and girls. The paper holds from year to year the great body of its old subscribers, and adds to these a yearly list of new names which many publishers would consider a liberal subscription list.

#### ITS ARTICLES AND WRITERS.

The COMPANION publishes three or four serial stories, some two hundred shorter stories, more than two hundred editorials, and more than fifteen hundred shorter articles, selections, poems, etc., each year. It employs some fifty contributors. Among these are the well-known names of J. T. Trowbridge, Edward Eggleston, Rev. E. E. Hale, Rev. Wm. M. Baker, Hon. C. C. Hazewell, Geo. M. Towle, Esq., Mrs. Leonowens, Miss L. M. Alcott, Mrs. H. P. Spofford, Mrs. Rebecca Harding Davis, Celia Thaxter, Mrs. Moulton, and Mrs. Diaz. Among occasional or promised writers are Wm. Cullen Bryant, Dr. Hayes, Hon. Schuyler Colfax, etc. Its editorial department is managed in a very careful and critical manner, the articles on literature, science, and politics being prepared by gentlemen who have special and exceptional fitness for the work.

1827—1877.

Nearly fifty years of its history have passed, and one generation has already handed the paper to another. To give the faces at the fireside a warmer glow; to create character and intelligence; to publish nothing of which the influence will not be good; to honor God, and to bring stainless and hallowed memories out of all the relations of the family and daily life, will be its aim in 1877, as it was in its origin fifty years ago.

# THE REPUBLICAN, SPRINGFIELD, MASS.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The Springfield (Mass.) REPUBLICAN, established in 1824, has become the leading and representative paper of New England, and the first provincial paper in America.

A Whig journal in the days of the old Whig party, it was first and conspicuous in the formation of the republican party; but since that party's great work was completed, the paper has grown steadily into a position of entire political independency, and made itself a leader in the press of the country for sectional reconciliation and administrative reform.

The REPUBLICAN now ranks, practically, as the independent journal of New England; the advocate of honesty and reform in government, honor and purity in politics, economy and simplicity in public and private life; the slave of no party, the organ of no politician; an honest paper for honest people.

As a newspaper, the REPUBLICAN cherishes the qualities which have made it popular and powerful—promptness, clearness, brevity, and comprehensiveness, regarding the development of thought, the difference of opinion and the discoveries of science, equally as news with current accidents and crimes, and giving especial attention to the record of events and the progress of life in New England. As a public journal, it is all-embracing in its field of discussion and selection, and independent and thoughtful in its treatment of all current topics, and aiming to make for itself both a welcome and useful place as an instructor, a critic, and a stimulant in every family that adopts it.

Published both daily and weekly, the WEEKLY REPUBLICAN is made up with especial care for a general circulation, and may fairly claim to be the best eclectic weekly newspaper in the country. It offers itself especially to politicians and scholars, to New Englanders at home or in distant parts of the country, and to Americans abroad, as giving, in a single sheet, a more comprehensive and impartial summary of general New England and American news, and fuller and more independent discussions of all prominent topics of American life, and a more varied picture of our literary, art and social progress than can be found anywhere else.

The REPUBLICAN is printed on a large double sheet of eight pages, forty eight columns. The daily is three cents a copy, seventy-five cents a month, and \$9 a year; the weekly is five cents a copy, \$2 a year, and \$1.50 in clubs of five or more.

As an advertising medium, the REPUBLICAN presents peculiar advantages in the amount, character and field of its circulation and the low rates charged. The DAILY REPUBLICAN has a firm circulation of 11,000 copies, which is as many or more than is printed by any daily paper in Boston save two; two or three times as many as by any other paper in Massachusetts out of Boston, or in Connecticut; and larger than by any other provincial paper in the country. In all western Massachusetts and up and down the Connecticut valley, it circulates more largely than all other daily papers together; while in more distant parts of New England, in Vermont and Connecticut especially, both the daily and weekly have exceptionally numerous readers among the most intelligent and influential members of society.

The terms of advertising—low, uniform and for cash—are five cents a line of eight words, each insertion, in the daily, and twelve cents a line in the weekly. Special or displayed notices, ten cents a line of space in the daily and twenty cents in the weekly. Address the REPUBLICAN, Springfield, Mass.

# THE PHILADELPHIA PRESS.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The Philadelphia PRESS was founded on the 1st of August, 1857. It was the creation of John W. Forney, who has figured for more than thirty years in public life, and who is the last member of the great quartette that once dominated American journalism—Greeley, Bennett, Raymond and Forney, and who, with a single exception, have surrendered their pens and lives. The history of THE PRESS is nearly that of Mr. Forney. He was its originator, and he has been its guiding spirit. In 1857 Mr. Forney, who had already achieved national distinction as a journalist, and as an earnest worker in the ranks of the Democratic party, who had edited its national organs and led its army of voters to victory in the doubtful and Keystone State, became disgusted with its management and distrustful of its purposes. A Democrat by conviction, but of the old and better school, and a disciplinarian by habit, he sought in the establishment of THE PRESS to reform his party within its own lines, to win it back to its original principles, and to save it from its enemies in its own household. The sequel of that determined struggle is well remembered. The fight was a gallant one, but the results were not those for which the editor hoped. He builded better, however, than he knew and it was through his efforts and those of the brave Douglass Democrats who co-operated with him, that the Republican party was consolidated for victory, Abraham Lincoln elected, and the nation newly born and baptized in the blood which has purified it from the great sin of slavery. The subsequent history of the newspaper of which he was the founder, and is still the active editor and proprietor, is well known. It is as it has been since 1860, an ardent and consistent advocate of Republican principles, but its party fidelity has never been subordinated to its personal sense of duty, and while its loyalty to the party and principles it prefers is not questioned, THE PRESS has never hesitated to speak out boldly against the mistakes and corruptions of its political friends.

As a newspaper THE PRESS is without a rival in Pennsylvania. In the extent of its correspondence, the multiplicity of its genius and the amplitude of its resources, it has no competitor. Its founder, John W. Forney, is at its head, and its ability is unquestioned. It is dignified in its discussions, but where denunciation is merited and necessary, it is unsparing. Sensationalism is a stranger to its columns, even while it prints all the news of the day, while it does not mince matters as a rule, it always supplies the knife where it deems it necessary.

THE PRESS enjoys a large circulation and extensive business patronage from the very best circle of readers—people of intelligence and means—who find it the only medium which supplies their wants and the best guide to their purchases. It was never more prosperous than at present, and its circulation is constantly increasing. It is recognized as the Journal of the Centennial Exposition as clearly as if the Commission had issued a proclamation to that effect, and the influence of this upon its growth is attested by its rapid rise in circulation since that great enterprise became a fixture.

For the centennial year THE PRESS has been completely reorganized, and with its founder at its head, has a staff of writers and contributors unequalled by that of any Philadelphia journal. Mr. Forney's vigorous pen is daily seen in its columns, and among his associate editors are Dr. R. Shelton Mackenzie, who has a literary reputation second to that of no other journalist in the country, Mr. Thomas Meehan, the scholar and scientist, Mr. John W. Forney, Jr., well known as dramatic critic, Mr. Audubon Davis, who has been connected in various capacities with many of the leading journals of the country, and Messrs.

Thomas F. Logan and Thomas A. Egan, well-known writers. It has a large and well-trained corps of reporters, the chief of whom is Robert M. McWade, able and regular correspondents at London, Washington, and Harrisburg, the capital of Pennsylvania, and occasional correspondents in nearly every town and hamlet in the State, who keep it informed of every important and interesting event that occurs.

THE PRESS occupies a large and convenient building at the Southwest corner of Seventh and Chestnut streets, in Philadelphia, the largest building, with one exception, occupied by a Philadelphia newspaper, and in the excellence of its appointments is unexcelled by any of its contemporaries. During the continuance of the Centennial Exposition it will have a branch office at the Globe Hotel, adjoining the Exposition and grounds, and in 1876 it will be conspicuous as *the* newspaper of Pennsylvania. It also prints Weekly and Tri-weekly editions, which also have large and well-deserved circulations.

The terms of THE PRESS are: Daily, single copies, 3 cents. Mailed to subscribers, including pre-paid postage, at \$8.75 per annum; \$4.40 for six months; \$2.20 for three months. Served to city subscribers at 18 cents per week.

THE TRI-WEEKLY PRESS is published every Tuesday, Thursday, and Saturday. Mailed to subscribers, including pre-paid postage, at \$4.40 per annum; \$2.20 for six months, and \$1.10 for three months.

THE WEEKLY PRESS, \$2 per annum; five copies, including pre-paid postage \$9.50; ten copies, including pre-paid postage, \$16; twenty copies, including pre-paid postage, \$29; fifty copies, including pre-paid postage, \$60. Larger clubs than fifty will be charged in the same proportion per copy. To the getter-up of clubs of ten or more an extra copy will be given.

All business letters for this office should be addressed to JOHN W. FORNEY, Editor and Proprietor of THE PRESS, Southwest corner Seventh and Chestnut streets, Philadelphia.

# THE CHRISTIAN UNION, NEW YORK.

HENRY WARD BEECHER, EDITOR.

## A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The CHRISTIAN UNION was established in September, 1869, and is therefore one of the youngest of the religious weeklies.

From its commencement the association of Rev. Henry Ward Beecher with it as editor gave it a strong impetus, and it sprang rapidly into favor. In a very few years it attained a circulation of thirty thousand subscribers, when by the introduction of chromo premiums, then a novelty (but since discontinued by the paper), the circulation was increased in a few months to the unprecedented number of one hundred and thirty-two thousand, extending to every State and Territory in the Union, to the Canadas, and indeed to every quarter of the globe.

As the medium of Mr. Beecher's "Lecture Room Talks," editorials, and articles of a general nature, the paper was warmly received by all classes, and still maintains its strong hold upon the Christian public. Its has been neither sectarian nor actively controversial. Its past and present position can best be described in Mr. Beecher's own language. He wrote:

"The CHRISTIAN UNION will seek the *Union* of all Christians, not by chasing the phantom of an organic unity, but by promoting such dispositions of charity and kindly sympathy as shall bring men of whatever mode of worship into a real sympathetic relation with each other.

It will recognize the existence and importance of Christian doctrine, but it will not admit any human statement of doctrine to be inspired or authoritative, but to be always open to new thought, criticism and reconstruction. It will regard no doctrine as *fundamental* unless it is indispensable to the formation of Christian character. Doctrines may be fundamental to the structure of a given system of theology, which are quite unimportant in the formation of Christian habits and dispositions.

Believing that the Sacred Scriptures represent the Gospel, not simply as an accomplished and external history, but as the disclosure of Divine Power, forever active, and unfolding itself in the experience of God's people, through all generations, we shall interpret the spirit and text of Scripture not alone by the laws of language, but by the experiences of the Church, and by all the disclosures of Divine Providence in human society.

Whatever throws light upon the structure of the body, the nature of human faculties, the divine method of creation and development of human life and society, we shall believe to be included in Christianity, as trees are included in the seeds from which they grow. Whatever in the whole range of science, and in the results of art, promotes the welfare of mankind; whatever in political economy augments the productive forces of society; whatever in politics tends to purify the State, destroy its enemies, exalt the government in wisdom, fidelity, and benignity, we shall regard as a part of that great development to which the name of Christ will be forever joined, who is the divine fountain from whence flows the vital influence by which mankind are to be exalted from animalism to Christian manhood. Above all material laws, and behind all sensuous instruments, is a Living Soul. We receive devoutly records and revelations of the truth wrought out in human life and experience by that Soul in the past, and with a quick sensibility we shall listen to every disclosure of God's truth which he is making through all avenues in our own day.

It is the purpose of the CHRISTIAN UNION, 'as much as lieth in it,' to avoid controversy. But when it is unavoidable it will 'do with its might what its hands shall find to do.' But its chief endeavor will be to secure good, in the household, the Church, and the State, by the genial and kindly forces of Christianity. Conscience, without benignant sympathies, is unchristian. A high ideal of human life and society, enforced by a cold and severe criticism which disdains all human weaknesses and infirmities, is less vulgar than ribald scoffing, but is none the less tyrannic and Satanic.

While generous criticism of the views and practices of all sects, parties and persons will not be disallowed, it is the purpose of this paper, in all ways, to bring men's hearts together. It will earnestly strive to encourage good works in all sects, to rejoice in the prosperity of each denomination; to cover their faults rather than to proclaim them; to be generously just; to avoid all spite

and malice toward enemies; to resist all influences which tend to separate men from each other; to promote kindness and sympathy between unlike men; not to disown severity of rebuke, and yet mainly to overcome evil with good; to promote cheerfulness and innocent mirth; to give to conscience an atmosphere of benevolence; to inspire hope, courage, and love in every household. It will, in short, seek to diffuse that Gospel, whose annunciation was, 'Good Will to Men,' whose Author and Hero sacrificed his own life to save mankind, and whose God and Father is named Love."

The following is a partial list of the present contributors to the CHRISTIAN UNION: Edward Abbott, Lyman Abbott, John S. C. Abbott, Augustus Blauvelt, Elihu Burritt, Leonard Bacon, Edward Beecher, Chas. L. Brace, Leonard Woolsey Bacon, Amelia E. Barr, Thos. N. Beecher, Joel Benton, Mrs. J. G. Burnett, Henry A. Beers, Anna C. Brackett, Hezekiah Butterworth, Mrs. M. E. Bradley, Mrs. M. L. B. Branch, Mrs. F. Barrow, Mryon H. Benton, R. R. Bowker, Rose Terry Cooke, J. Towle, Sophy Winthrop, and Sarah C. Woolsey.

The pages of the CHRISTIAN UNION are never soiled by advertisements of a doubtful character. Neither does it knowingly admit *blind* advertisements intended to decoy, mislead, and defraud the innocent. No advertisement is received which cannot be read aloud in the household without invidious comment. All advertisements are carefully examined, and their character known to the publisher before insertion. Its value as an advertising medium has been very fully tested by the most prominent advertisers in this country. Their statements have frequently appeared in its columns; but a better attestation of its merit is the fact that it has retained many of them during all the financial distress of the past two years, and is still receiving their constant patronage. The fact, too, that its columns are continually employed by the best-known and most influential *advertising agencies and advertisers* in the land, is additional evidence of the excellent and remunerative character of the circulation.

The present publisher is HORATIO C. KING, and the office of the company is at No. 27 Park Place, New York.

# THE CINCINNATI GAZETTE, CINCINNATI, O.

ESTABLISHED 1793.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The CINCINNATI GAZETTE has been in existence eighty-three years. Cincinnati was at that time merely a frontier village of a few hundred inhabitants. Now it is one of the important and prosperous cities of the country—the centre of its population, and the heart of the continent.

The GAZETTE'S growth aptly illustrates the general growth of American journalism, for no paper of equal age has attained a similar circulation and celebrity. The most material change thus denoted is that in the cost and revenues of leading papers. As lately as 1850 the entire yearly receipts of the GAZETTE for subscriptions would not have equalized the present expenditure for correspondence by telegraph and mail. The labor of half a dozen persons then sufficed for the editorial work, while the expense of correspondents was seldom incurred. Now the editors, reporters, and correspondents of the GAZETTE are numbered by hundreds, and it has a representative in every leading city of either hemisphere. Its other disbursements have augmented in the same degree, being measured by the public demands and expectations, and compensated by its ever-increasing patronage. A long and firmly-established paper's expenses are regulated by its circulation, and the latter is effected only by the matter of brains, business enterprise, and density of population. The city of Cincinnati is notably superior in its intelligence, and exacting in newspaper requirements, while the contiguous country upon all sides is thickly populated. Its newspaper standard is, therefore, above the average, and confers upon the paper that acceptably fills its requirements a superior character and circulation.

The changes in the publication department of the GAZETTE are worthy of notice. The first "power press" used West of the Allegheny mountains was bought by it. It cost twelve hundred dollars—a very large outlay for the purpose in that early day. The wheel that moved the machinery was turned by a single man. Its hourly capacity was 800 sheets, printed on one side, and to furnish that number of complete papers required two hours. The same person who turned the wheel of that press is still employed in the office on the new Hoe Perfecting Double Press, which has a self-feeding capacity of 28,000 sheets per hour, printed on both sides. It is the fastest press in the world. In sixty minutes it does as much and better work than the first power press could do in seventy hours. The machinery and appliances in existence thirty years ago could not have accomplished in a week the work now done in a single day in any large newspaper office. A century ago it could not have been accomplished at all.

The GAZETTE has three editions—daily, semi-weekly, and weekly—printed from stereotype plates. There are printed weekly an aggregate of 160,000 papers, which are read by a half million of people distributed throughout Ohio, Indiana, Michigan, Kentucky, Tennessee, and West Virginia. The annual issues of the paper aggregate about 8,000,000, and the paper thus used, if in a continuous sheet, would reach over 5,000 miles. The vast business thus indicated has mainly grown up within a third of a century, for prior to 1840, Cincinnati's newspaper traffic was trifling. In 1835 the GAZETTE'S aggregate circulation did not exceed 1,200 copies, while at the present time these figures barely cover the mere occasional fluctuations, within a few days, in its circulation. The bed of the old stream is but the margin of the new.

As a complete American newspaper the CINCINNATI GAZETTE has no superior. Its ability and its integrity are recognized and unquestioned. It has a national

reputation for its fearlessness no less than for its fairness in the discussion of matters of political and public policy. As a commercial paper it has been regarded as a standard for over twenty-five years. It has aimed for over half a century to fully satisfy the demand for a paper wholly acceptable to the cultured and active business classes of its section, and it has succeeded. In a population older, more advanced and denser than can be found in any other part of the West, it is undeniably the leading paper in character, in influence and in circulation.

The weekly edition of the GAZETTE is one of the most widely-circulated family and agricultural papers. Its agricultural value is seen in its abundant correspondence from practical farmers, who make it their medium for the exchange of views and intelligence. Of literature it is not unmindful. Great prominence is given to reviews of new publications, and to scientific, social and religious movements. It contains more reading matter than any other Cincinnati paper, and the character of its contents precludes a comparison with the pretentious but worthless and transitory mushrooms of the journalistic field. It has more than 3,000 regular club agents, and is sent to subscribers at over 4,000 post-offices throughout the land.

The GAZETTE'S publication building, on the northeast corner of Fourth and Vine streets, was bought by its proprietors fifteen years ago, and is now the most valuable corner in the city. Except a small part of the first floor, the entire edifice is devoted to the business of the GAZETTE, and recently the latter was obliged to secure additional space in a contiguous building. The Eastern office of the paper is at No. 37 Tribune Building, New York city.

In proportion to its circulation, and to the manifest value of the latter to advertisers, the GAZETTE rates are the lowest in Cincinnati. Its columns have uniformly been preferred by foreign advertisers to those of any neighboring cotemporary, and for a long time no other Cincinnati paper has enjoyed an equal revenue from distant sources.

# THE PHILADELPHIA DEMOCRAT.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION

PHILADELPHIA DEMOCRAT BUILDING.

The PHILADELPHIA DEMOCRAT was established 1838 as a daily German newspaper by Mr. L. A. Wottenweber. Like all its contemporaries of that time, it was of humble origin, and made but slow progress until the events of 1848 brought about that great tidal-wave of German immigration to our shores, which continued with undiminished force till the beginning of our civil war, and greatly changed the character and the status of the German element in the United States, making it much more influential, not only by more than trebling it in numbers, but by adding to it by thousands highly-educated Germans, who, having joined the revolutionary movement, had, after its defeat, to seek refuge abroad, which most of them sought and found in the United States. At the beginning of that period the DEMOCRAT came by purchase under the control and management of Messrs. John S. Hoffman and Dr. E. Morwitz, who, under the firm name of Hoffman & Morwitz, at once infused new life into it and made it one of the leading and most influential newspapers in the United States. When the PHILADELPHIA DEMOCRAT was established it was located in the then centre of the German population of the city, but after the year 1848 the German element was spreading over the whole city, and besides, it became of more importance to be located in the business centre of the city. With this view the proprietors purchased a most eligible site on Chestnut street—the old Jones hotel—and by extensive alterations, amounting almost to rebuilding, made it one of the best-arranged newspaper establishments and printing houses in the country.

The building is five stories high, and has a front of fifty-five feet on Chestnut street and a depth of 245 feet to Sansom street.

From the removal of the PHILADELPHIA DEMOCRAT to its new office building, 612 and 614 Chestnut street, may be dated a new era for it, so rapidly were extended its circulation and its business patronage. Mr. Hoffman leaving for Europe in 1873, the proprietor, Dr. Morwitz, changed the name of the firm to Morwitz & Co.

The DEMOCRAT is the leading German organ in Pennsylvania, one of the oldest and largest eastern States, and the one which, from the beginning, was settled and influenced by Germans, from whose settlements most of the Western States have received and are still receiving, year by year, their solid native immigration, whereby the circulation and business of the DEMOCRAT have been constantly, naturally, and largely increased, until now the circulation and influence of the PHILADELPHIA DEMOCRAT, in its various publications—daily, weekly, Sunday and others—are by the great public regarded and appreciated as the largest and most important of the German newspapers in the United States.

# THE PIONEER-PRESS AND TRIBUNE.

ST. PAUL AND MINNEAPOLIS, MINNESOTA.

THE ONLY MORNING PAPER IN MINNESOTA—THE GREAT NEWSPAPER  
OF THE UPPER MISSISSIPPI VALLEY.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

THE PIONEER-PRESS AND TRIBUNE BUILDING.

In no direction has the marvellous progress of the West in the last fifteen years been more distinctly marked than in its journalism; but not even the marvellous growth of the Chicago newspapers, which equal if they do not surpass those of New York in all the characteristics of the first-class metropolitan newspaper, affords a more striking illustration of the journalistic development of the West than the newspaper which has recently assumed the title at the head of this article. As its name indicates, it is the product of the consolidation of the three old morning dailies of St. Paul and Minneapolis. The *St. Paul Pioneer*, established in 1849, and whose history dated back to the organization of the Territory of Minnesota, was consolidated in the Spring of 1875 with the *St. Paul Press*, which since 1861 has been the leading Republican journal of the State. In May last the *Pioneer-Press* was again consolidated with the *Minneapolis Tribune*, which was founded in 1865—and these three journals had previously swallowed up or supplanted in the course of their career some dozen rival or antecedent journals, so that the PIONEER-PRESS AND TRIBUNE represents and embodies the mature results of nearly all the labors, the enterprise, the capital, and the brains which have been devoted for the last twenty-seven years to the building up of journalism in these two flourishing cities. The practical result of this

consolidation of the three rival morning newspapers of Minnesota is to give the PIONEER-PRESS AND TRIBUNE a *bona fide* daily circulation of nearly 10,000 copies. No other daily newspaper in the Northwest, outside of Chicago, has half so large a circulation, and it is five or six times as large as that of any other paper in Minnesota. Nor does any other newspaper in the Northwest, outside of Chicago, enjoy so extensive a field of circulation, or so commanding a position and so exclusive an ascendancy within that field. It is the only morning newspaper published in the two adjacent cities of St. Paul and Minneapolis, the commercial and manufacturing centres of Minnesota and the upper Mississippi Valley, with an aggregate population of 75,000 souls, and it is the only morning newspaper published in the State of Minnesota with a population of 650,000 souls. It is the only important morning journal published west of Chicago and Milwaukee, from which St. Paul is separated by a breadth of 500 miles, or north of St. Louis, which is 900 miles distant. Its actual field of circulation embraces the whole of Minnesota, Northern Iowa, Northwestern Wisconsin and Dakota, and within this field, with an aggregate population of 850,000 souls it has no competitor.

As a newspaper the PIONEER-PRESS AND TRIBUNE is every way worthy of its great constituency. It is an eight-page paper of the size of the great Chicago and New York dailies, and publishes daily more reading matter than any Philadelphia, Cincinnati or Boston daily. Among the western journals the greatest of the Chicago and the St. Louis newspapers can alone compare in standing, influence or circulation with the PIONEER-PRESS. But these newspapers, which overshadow and supplant all rivals in Illinois, Central and Southern Iowa, and Eastern and Southern Wisconsin, are published at points too remote from the great northwestern territory of the PIONEER-PRESS to compete with it in this, its own exclusive field, where it distributes the news of the day from twelve to thirty-six hours ahead of the Chicago dailies, and it is the unrestricted possession of so large a field which has permitted the building up of a first-class newspaper like this in a region so comparatively new. The same conditions which have promoted the marvellous growth of the PIONEER-PRESS in the past afford an ample guarantee that its future growth in circulation and character will be commensurate with the rapid progress of this great and fertile region, which constitutes the wheat belt of the continent, and is now advancing more rapidly in wealth and population than any other part of the Union.

The DAILY PIONEER-PRESS is universally taken by all classes of readers in Minnesota and the adjacent districts of the neighboring States who take any daily newspaper at all. The WEEKLY PIONEER-PRESS, a magnificent quarto, circulates as universally among the intelligent rural population of Minnesota. Its weekly edition is 14,000, and is rapidly increasing.

The Pioneer-Press Company are also the publishers of the Minneapolis EVENING TRIBUNE, the best evening paper in the State, and the only one in Minneapolis, with a large local circulation.

The Pioneer-Press Company own one of the largest and finest structures devoted to the newspaper and printing business in the West. It was built a few years ago for the St. Paul Press, on the corner of Minnesota and Third streets, St. Paul. It is 50 feet front by 150 feet deep, being four stories high, with a mansard roof, and two-thirds of its whole area is occupied by the newspaper, printing, binding and lithographic business of the Pioneer-Press Company. It is undoubtedly in all its departments the best equipped printing and newspaper office in the Northwest, outside of Chicago.

# THE SACRAMENTO DAILY AND SEMI-WEEKLY RECORD-UNION.

A LEADING CALIFORNIA NEWSPAPER.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

Sacramento is the capital of the State of California, centrally located, and the chief city of the interior of the State. The only morning paper published at the capital of the State is the Sacramento RECORD-UNION. Its history is co-equal with that of the State, and closely interwoven with the historical, social and political progress of California. No paper on the Pacific Coast is more widely known, or enjoys a more general circulation. The Sacramento DAILY AND WEEKLY UNION was established in the year 1851. Its progress was one unprecedented in newspaper annals, and during a quarter of a century it justly gained the reputation of being the best newspaper on the Western slope. Its influence was commensurate with its great reputation, and it was the acknowledged leader of independent thought, progress and all material movements looking to the advancement of the State, the upholding of purity in politics and social and business life, and as the most thorough and reliable of newspapers. It was the tocsin for years of all popular movements, the unflinching friend of sobriety, permanency and real merits in all those early years when the society of the Pacific Coast was receiving the impress which should fix its future standing. Its proprietors grew gray in the service, and in 1875 they retired from its management, and it became consolidated with the Sacramento *Daily and Semi-Weekly Record*. The *Record* was established *in fact* in the year 1867. It had for its business rival the *Union*, it moved in the same circle, and sought the same patronage. From the outset it was a prosperous paper. Its conduct was that of energy, refinement and independence. It grew in popular favor day by day and finally stood side by side with its competitor in rank, standing and extended influence. In the height of its career, enjoying an enviable reputation, and recognized as an honor to the State, it was consolidated with the *Union*, and in February, 1875, the RECORD-UNION was issued. Since that date the current of these two papers, flowing in the same channel, has been one of force, independence and broad influence more than equal to that of any newspaper on the Pacific slope. Two marked features distinguish the RECORD-UNION, a total absence of sensationalism, in place of which is a perfect news reliability and energetic spirit; and second, an elevated tone not equalled in the history of journalism. Its departments are seven in number: Editorial, News, Literary, Agricultural, Commercial, Statistical and Local.

In the Editorial Department the RECORD-UNION has no compeer west of the Mississippi for vigor, scholarly ability, clearness of perceptions, nicety of diction or independence and originality of thought. In its News Department its facilities are those afforded by the Associated Press dispatches, a thorough private system of coast telegraphic news gathering, an extended and able corps of local correspondents and special reporters, and a systematic departmentized arrangement of selected news from an unlimited exchange with the papers of the world. Its Agricultural Department leads all efforts of this kind in newspapers in the United States, and is under the management of a pioneer-experienced and thorough agriculturist. Its Literary Department is ably managed and conducted with an eye-single to presenting the choicest and most varied selections from American, English, German and French literature, and a total exclusion—as, indeed, is done in all the departments—of all matter which can offend the most refined taste, or shock the keenest sensibility. Its Commercial Department is prompt and constantly up to the business standard of the Coast. Its Local Department is controlled in the interest of purely local

news, and is acknowledged to be most thorough, correct and dignified of the Coast. The Statistical Department is a marked feature of the paper, and presents constantly all progressive results of State industries and growth, culminating on New Year's day of each year in a mammoth holiday statistical sheet combined with the usual issue of the paper, which on that occasion is marked by enlargement and annual review in all the departments upon topics congenial to them.

In addition, the RECORD-UNION has a large corps of regular Eastern, English, German and home correspondents, whose writings partake of the same free, energetic, independent and scholarly character which characterizes the entire paper.

The RECORD-UNION on the Pacific Coast and throughout the Union is acknowledged as the leader in journalistic thought and expression in California. It is thoroughly independent in tone, bound to no party, the organ of no sect or interest, and the tried champion of Republican institutions. Its tendencies are strongly those which are reflected in the principles of the National Republican party, and its constant voice is for the integrity of the government, the perpetuation of free institutions, purity in all governmental branches, and honesty in all things. It enjoys the largest and most extended circulation, daily, of any interior paper, and its semi-weekly edition surpasses in extended circulation that of any journal circulating west of the Mississippi.

Its building is one of the most prominent in the capital city, and all its interior arrangements are those usual to a first-class newspaper. The RECORD-UNION as an advertising medium for the Pacific Coast, attests its value by the constantly-crowded condition of the columns set apart for that purpose, and which are availed of with avidity by the business men of the Coast and the great East.

In conclusion, the paper has no equal on the Pacific slope, has no compeer there in influence, intelligence and energy, and no rival in the esteem of the people.

It is published by the Sacramento Publishing Company, of which William H. Mills is general and sole manager. It is issued each morning, except Sunday, and the semi-weekly appears on Wednesdays and Saturdays of each week.

## THE PRESBYTERIAN, PHILADELPHIA.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

The PRESBYTERIAN was established as a weekly journal in the year 1831, and has long been regarded one of the best religious family papers in the country. Its corps of correspondents embrace able writers in all parts of the world. Its editorial columns are presided over by Rev. M. B. Grier, D. D., and Rev. J. A. Mutchmore, D. D. It is an excellent advertising medium, reaching a most substantial and intelligent class of people. The office of publication is at 1512 Chestnut street, Philadelphia.

# THE CO-OPERATIVE NEWSPAPERS.

---

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

---

A most remarkable peculiarity of American journalism is the combination or system of so-called "Co-operative Newspapers," a system originated about fourteen years ago, and which has had a wonderful growth, until it now embraces over 2,000 of the weekly journals of the United States—and the number is still increasing.

Comparatively few people are aware of the existence of this important element of journalism. Unless the reader is connected with the press or is a general advertiser, he probably is unacquainted with the meaning of the term "Co-operative Newspaper." If, during a visit to the Newspaper Pavilion, you should take up for perusal some newspaper published, for instance, in one of the interior towns of New York, and should afterwards take up a newspaper published in some town in Pennsylvania, you might be very much surprised to find that there was apparently a striking coincidence in the articles appearing in the two papers. It would lead you to compare them. You would notice that there were two pieces of poetry in the first column of one of the papers, and on turning to the other paper you would observe the same two poems in the same corner of that paper. Following the poetry in one paper there would be a story occupying several columns; you look into the other paper and find the same story there. You think it a very strange coincidence that two editors, one hundred miles apart, should have made the same selections to that extent the same week, and that the articles should be placed in the same position in both papers. You compare the papers further, and notice a summary of the news of the week. Both papers have the same summary, word for word. Then the advertisements are examined and found to be precisely alike in both papers and placed in the same order. A further examination reveals the fact that the outside pages of both papers are exactly alike throughout, with the exception of the heading which gives the name of the papers. Your curiosity is aroused, and you determine to solve the mystery. If you inquire of one of the attendants at the Pavilion you will obtain the information sought for. You will be informed that the two papers were both printed at an establishment in New York city, which also prints over 300 other newspapers. It prints but one side of the sheet, however, the matter selected for this purpose consisting of general news, literature, poetry, agricultural and other subjects of general interest. The other side of the sheet is printed subsequently at the office of publication, and is filled with editorials, and local news and advertisements. The papers printed at the New York establishment are not all exactly alike, however, nor of the same size. Nine different sizes of folio and quarto sheets are printed, and when two or more papers are supplied which are published in the same or near-by counties, the matter furnished is entirely different. Similar establishments exist in Chicago, Milwaukee, Cincinnati, Memphis, St. Paul, and other cities, and altogether they save to the country press over \$2,000,000 annually. There is also a further great saving to advertisers. Formerly, if a general advertiser wished to insert an advertisement in these 2,000 papers, the expense of correspondence and the time involved in making contracts was necessarily very great. This time and expense are saved to the advertiser under the co-operative method, and he also secures a lower rate for the advertising than he could obtain from the papers direct, for the reason that an advertisement does not require to be set up 2,000 times, or once for each paper, but only forty times, and it frequently happens that the price charged for an advertisement is less than the actual cost of setting up the type, if it were set up once for each newspaper. The leading advertisers of the country patronize these lists very extensively, and it is not

uncommon for the annual bills of an advertiser to amount to from \$10,000 to \$20,000, and sometimes to even \$30,000 to \$40,000. The Chicago *Daily Times* of March 11, 1876, thus alludes to the American Newspaper Union, which includes 1,200 of the co-operative papers:

Within the past twelve years there has been a vast improvement made in the country newspaper—particularly in respect to the care in which all the news of the day is gathered and edited, and the literary ability displayed in its columns, which relieves the provincial press from the few objections that have been heretofore urged against it, and has accorded to it higher dignity, extended its influence, and greatly augmented its power for good. The typographical appearance of the country journal of to-day is perfect; the display and classification of its advertisements tasty; the quality of the paper used and the printing far superior to that of its city contemporaries.

This has been chiefly due to the American Newspaper Union, which practically shapes the literary tone of some 1,200 different newspapers scattered through the Eastern, Middle, Western, and Southwestern States; collates their foreign and national news, selects their miscellany from the best sources, and infuses a vigor into their columns such as they never knew before. The work of the American Newspaper Union is as curious and interesting as it is valuable. We doubt if many of our city readers understand the peculiar field in journalism that it occupies, and we therefore devote a little space to the subject for the purpose of conveying the information.

The idea on which the Union is founded originated with Mr. A. J. Aikens some twelve years ago. He was then engaged in the publishing business at Milwaukee, and being a practical printer and a thorough business man, the thought occurred to him that a number of country papers might co-operate and have the inside, *i. e.*, the news and literary portion of their sheets, printed at one general city office, where the opportunity for having the work well done is superior to that enjoyed by most country newspaper offices. The idea was put into practical operation at the office of Cramer, Aikens & Cramer, proprietors of the *Evening Wisconsin*, Milwaukee, and it worked so admirably as to attract the attention of newspaper men all over the country, and met with universal approval.

The cost of advertising in these lists is ridiculously cheap. *One cent per line* in each paper covers the expense. We are not aware of any kind of newspaper advertising, good, bad, or indifferent, that will compare in point of cheapness with this. But when we take into consideration the character of the papers, the class of intelligent readers whom they reach, their power and influence, their general diffusion over the whole country, and the manner in which the advertisement is printed, it must be admitted that the American Newspaper Union has reached the desideratum long sought for by advertisers, *viz.*: "The largest amount of benefit for the least possible sum of money."

The economy of advertising in these lists is apparent for another reason, *viz.*: If the advertiser desires to use a cut in his advertisement, but one cut is necessary for the whole 1,200 papers. If he were to advertise direct with 1,200 different papers it would require an equal number of cuts, and the cost for the cuts and for postage would equal or exceed the cost of the advertising, as many advertisers have found to their sorrow heretofore. And they found, too, to their disgust, that their advertisements were not always inserted as directed, being frequently left out and often disfigured by the dropping out of type. With the Union the advertiser is relieved of all trouble, all expense for extra cuts and postage; the advertisement is neatly set up and stereotyped, and the advertiser may rely on its going in the whole edition of 1,200, for if the officers of the Union were disposed to leave it out of a part of their edition, it would cost them more than to print it.

The distribution of the papers is as follows:

New England.....	78	Indiana.....	81	Iowa.....	85
New York.....	101	Illinois.....	117	Nebraska.....	15
New Jersey.....	27	Michigan.....	86	Missouri.....	17
Pennsylvania.....	65	Wisconsin.....	98	Georgia.....	19
Virginia.....	24	Tennessee.....	29	Alabama.....	32
No. and So. Carolina..	24	Kentucky.....	29	Louisiana.....	11
Ohio.....	122	Minnesota.....	79	Mississippi.....	29
Other States, 46.					

Persons wishing to learn more of this subject, or to make arrangements for advertising in the lists, should send for a catalogue to either of the establishments, as follows:

New York Newspaper Union.....	150	Worth street, New York.
Chicago Newspaper Union.....	114	Monroe street, Chicago.
Aikens Newspaper Union.....	143	Race street, Cincinnati.
Milwaukee Newspaper Union.....	365	East Water street, Milwaukee.
Southern Newspaper Union.....	227	Second street, Memphis.
St. Paul Newspaper Union.....	17	Wabashaw street, St. Paul.

Bound volumes of the various sizes of newspapers of the different lists may be seen in the Newspaper Pavilion, Fairmount Park, during the Centennial Exhibition. An inspection of these volumes will be found an interesting feature of the exhibition.

# G. P. ROWELL & CO.--ADVERTISING AGENCY.

A SKETCH FOR THE BOOK OF THE CENTENNIAL NEWSPAPER EXHIBITION.

## WHAT IS AN ADVERTISING AGENCY?

A gentleman lately stepped into the office of the *New York Times* for the purpose of inserting a notice of "Situation Wanted" for a cook, who had lived in his family and for whom he was desirous of obtaining a place before closing up housekeeping, as he then contemplated. The girl had, at a former period, lived in Brooklyn, and, having friends there, it was thought best to insert the advertisement in the *Brooklyn Eagle*. Intending to give the matter his personal attention, he inquired the location, in Brooklyn, of the office of the *Eagle*. He was informed that if he was going there for the purpose of causing this advertisement to appear in that paper, he could save himself the trouble by leaving the order in the advertising agency in the *Times* building, up stairs.

GEO. P. ROWELL & CO'S COUNTING ROOM.

The gentleman thereupon came to the agency with the order—six lines, one insertion—for which he paid sixty cents, being informed that that was the amount required according to the rates of the Brooklyn paper. Never having heard of an advertising agency before, the advertiser wished to know how much additional he must pay for being saved the journey, ferry fares and time. In answer to this he was informed that, upon making settlement with the *Eagle*, the sum of twelve cents would be allowed to the agency as a commission or payment for the service rendered in taking and forwarding the order.

This incident conveys nearly all that can be told to explain the uses of a Newspaper Advertising Agency. Had the notice been intended for a San Francisco paper, for one in Montreal, New Orleans, or any of the New York city journals, it would have been received on the same terms. The Advertising Agency is a convenience; it is nothing more.

The advertising agent, from the knowledge gained by experience, becomes an expert. He learns from papers the lowest prices which they say they will accept for advertisements. He learns from advertisers the rebates and favors which they have obtained. He knows the strong points and the weak points of the publishers; what papers will take advertisements low and what class of advertisements they will take lowest.

To nine persons in every ten the words Newspaper Advertising Agency convey no idea. They never heard of such a thing, or, if they have, wondered

what it was all about. Of the forty millions of people in the United States not more than one in five hundred pays a penny in a year for an advertisement in a newspaper. Of those who do, barely one in ten advertises beyond his own immediate neighborhood, and consequently has no occasion to consult or advise with any agent or middle man.

The above calculations give 10,000 persons, distributed throughout the Union, but mainly in the larger cities, who advertise or desire to advertise in papers issued at a distance from their homes, about the character, appearance, value, circulation and prices of which they have no reliable information. An Advertising Agency is the source from which such information may be obtained.

Inasmuch as no more than one person in five thousand has any personal interest in them, and that the existence of such institutions dates back hardly forty years, no cause exists for wonder that, to the general public, their uses are not well known.

To many persons who have some knowledge of Advertising Agencies, the scope of their business is still unknown. We write with a hope of making the matter better understood and to answer some of the questions which are so frequently propounded by interested inquirers.

A Newspaper Advertising Agency doing a general business is an institution where are received and kept on file copies of newspapers issued in various parts of the country, which are mailed to the agency, that they may be there accessible to persons who desire to use their advertising columns. Schedules or tables of rates, and special information about the cost of advertising in each separate paper are also a necessary part of the paraphernalia of the agency.

Some Agencies make a speciality of a certain class of publications, as for instance: in New York one takes advertising for magazines, another for papers printed in the German language, several confine their operations almost exclusively to publications issued in the city, while in various parts of the country are those who make a leading speciality of the religious press; others, again, represent only country papers, while a few act for every class, shade, and denomination of the entire press of the country.

As the files of papers which are found at the agency are furnished by publishers gratuitously, they are taken as establishing the authority of the agency to represent such as are regularly received, and for which a schedule of advertising rates has been furnished.

The cost of the yearly subscription upon his publication is a tax which the publisher pays for the support of the agency. As the payment of this tax is voluntary, the regular receipt of the paper is, with reason, taken to be the sufficient authorization of the agency to represent it. By this rule may be tested the comparative hold possessed by the various establishments of this kind upon the confidence and esteem of newspaper publishers.

#### WHO ARE THE PATRONS OF ADVERTISING AGENCIES ?

Few persons have any conception of the amount of money paid for newspaper advertising. The number of papers printed in the various States exceeds eight thousand; while the advertising patronage of a single New York daily is said to exceed \$750,000 per annum! To insert a single column on the last page of the principal illustrated weekly costs no less than \$720 a week—\$4 a line! If every paper averages an annual receipt of \$1,000 per annum from advertisements, we have \$8,000,000 in the aggregate; while, if every paper printed received the magnificent patronage of the daily above referred to, it would amount to sufficient to pay the national debt in four months!

Only advertisers in the largest cities have occasion to apply to an agency concerning advertising in their own vicinity. The principal patrons of the Advertising Agency are those who wish to reach distant points. Of these, first in importance are the patent medicine men; next comes that class whose announcements commence with the words, "Agents Wanted," which includes dealers in subscription books, sewing machines, patent rights, and the thousand and one articles which may be sold by hawkers or pedlers; then come the Bond advertisements, "For Investment," Land Companies, "All Wanting Farms," Gift Concerts, Newspaper Prospectuses, Business Cards, &c., &c. Advertise-

ments of "Information Wanted," are also among those most frequently brought to the agency, but as they go into few papers, and for no more than one or two issues, their cost is inconsiderable.

Several individual advertisers, known to the writer, are in the habit of investing yearly upward of \$100,000 per annum, but their number will not exceed ten. Perhaps fifty or more spend as much as \$20,000; while those who pay sums ranging from \$1,000 to \$10,000 may be counted by hundreds. The amounts expended by those remaining, to make up the ten thousand who send advertisements beyond their immediate neighborhood, range from one dollar upward, according as hope, caprice, their desire to experiment, or their means of paying may dictate.

#### WHAT THE ADVERTISER GAINS BY EMPLOYING THE AGENCY.

"What do I gain by going to the Advertising Agency in preference to appealing to the paper direct?" is the question most frequently propounded by the novice in advertising. To this the true answer can only be, Convenience and the benefit of experience.

The old advertiser, of undoubted responsibility, who knows what he it about, knows the value of papers, their prices; knows how to set up his advertisement to secure the best display in the smallest space, and how to order its insertion that the publisher will not extract a justification for an extra or increased charge, has nothing to gain by transacting his business through an agency except the convenience of making one transaction, verifying one account at one place, at one time, and paying one bill instead of many. Yes the old advertiser deals mainly through agencies for this reason, and the saving of time, stationery and postage.

It is not fair to suppose that the reputable agent will underbid his principal; his duty does not lie in that direction. It is his province to arrange that his advertiser shall not pay for more space than he requires, that he get a good position without an unnecessary extra charge. The advertiser who deals through a reputable agency knows beforehand that the cost is not to exceed a given sum. If more must be paid the matter is submitted for his reconsideration. How many advertisers have received from publishers bills amounting to dollars when they expected to pay dimes only—to hundreds of dollars when they supposed tens would be all that would be required? How many have ordered the insertion of cards by word of mouth, believing that advertising was cheap, and learned when too late how erroneous was any such supposition?

It is a notorious fact that as soon as advertisers begin to do business through agencies their bills decrease in individual papers, and the amount saved is devoted to extending the announcement in other journals, procuring thereby a wider circulation. It is in recognition of this fact that some publishers decline allowing any commission to an agency on advertisements from those who have previously dealt with the paper direct. So thoroughly is it understood that no advertiser now deals direct who understands his interests, pays his advertising bills, and makes them pay him, that it is often considered an evidence of irresponsibility or incapacity for an advertiser to apply direct for terms of advertising: There are exceptions to this rule among the largest and oldest advertisers, who commenced business before the agency system was perfected; but it requires good credit and a well-known name to bring specific answers from publishers to applications for rates or even orders for insertion, as many an advertiser has found out to his chagrin, although classed in the mercantile books as of first-rate standing.

As the advertising agent is paid for his services, and for assuming to become responsible to the publisher for the payment of all bills for advertising ordered through the agency, it becomes common for the advertisers to demand the same allowance on their own business when they deal direct. To this demand publishers who are in the habit of sustaining their rates rarely respond, but inasmuch as the making of the request supported by such questions as, "Isn't my money as good as that of the agent's," etc., etc., expose the advertiser to the imputation of being deficient in sense or moral rectitude, or that he believes the publisher to be so, the latter sometimes forgets himself and the duty he owes

his agent, and makes a reduction equivalent to the agent's commission, as the easiest way of satisfying the advertiser and putting an end to further talk or correspondence. The advertiser not infrequently finds, by after experience, that the agent is able to procure for him even a greater reduction, and at the same time retain his own commission intact.

A moment's careful consideration will convince an advertiser of good sense that although a publisher would prefer the order direct, when sure of his pay, for the sake of saving the reduction taken by the agency for a commission, yet if the reduction *must* be made in one shape or another, leaving him nothing to gain, he will prefer to give it to the agent, to whom it can be allowed without seeming to break down his rates or violating his self-respect.

The advantages of the Newspaper Advertising Agency to the advertiser then are these:—Experience without cost; one contract instead of many; guarded against unnecessary extra charges, and knowing in advance the price, beyond which an order will not be carried without his full knowledge and consent.

Of those advertisers who believe that they can obtain the same net terms direct as would be accorded to the agency, we ask, is it reasonable that publishers should extend as good rates to an advertiser who expends \$5,000 a year as to an agent who forwards \$50,000 a month? If any one is to be pleased or catered to, is it not, under the circumstances, more likely to be the agent? Would eight thousand publishers contribute free their periodicals from year to year, the subscriptions upon which, taking dailies, weeklies, and all, amounts to more than \$20,000 per annum, and then set about undermining the institution for the support of which they have paid so much? Is such a supposition reasonable? The truth is that between the best class of agencies and the publishers there is no competition. On any considerable order, the agent, by taking advantage of every point in the advertiser's favor, is *always* below the aggregate price obtained by application to publishers.

Before entrusting his work to an agency an advertiser should first satisfy himself of its ability to secure for him the best advantages, after which his business should be placed in the hands of the agent selected, and kept there as long as he is faithfully served. When confidence is no longer had in the agent, let the advertiser resort to no half-way measure, but withdraw his patronage altogether.

#### THE BEST ADVERTISING AGENCY.

The best advertising agency is one that secures so much business from a good class of advertisers as to enable it to command from the greatest number of publishers the most favorable rates ever accorded.

The American Newspaper Advertising Agency of Geo. P. Rowell & Co., No. 41 Park Row, New York, is the principal one in the United States, and by far the most complete establishment of the kind in the world, for in no other country are these institutions conducted with anything like the system which obtains here. Messrs. Geo. P. Rowell & Co. established their agency in 1865, and in 1870 consolidated with and succeeded to the business of the advertising agency conducted till that time, since 1849, by Mr. John Hooper, who was the first advertising agent who did business in the city of New York.

The Advertising Agency of Messrs. Geo. P. Rowell & Co. controls by far the largest amount of advertising patronage ever secured by any institution of the kind. From their office is forwarded an amount not short of that emanating from all the other agencies in the United States combined. They receive and have on file all newspapers published in the United States and Canadas, with scarcely an exception of importance. They receive the best terms and largest reductions allowed to any advertising agency.

They are the source from which all other advertising agencies, without any exception, derive their information about newspapers. Let an advertiser step into any agency and ask the name of the publisher of a paper at any distant point; let him ask how many papers are issued in such and such a city, how many are daily, how many weekly, what is the politics, character, or circulation. To any or all of these questions he will receive no reply until a reference has been made to Geo. P. Rowell & Co's Annual Newspaper Directory. No account is kept in any other agency of the new papers which are started, now averaging

five every day; or of the old ones, which die or change hands. For all information of this kind all the agencies depend upon Geo. P. Rowell & Co's Weekly NEWSPAPER REPORTER.

Besides the advantage of their position at the head of their business, they have special contracts which give them an unequaled advantage in more than two thousand of the newspapers of the country.

#### WHAT IS DONE WITH THE NEWSPAPERS?

Messrs. Geo. P. Rowell & Co. receive more than one hundred and forty thousand newspapers every three months, or more than seventeen hundred and fifty every day. On occasions in the winter, when the snows interfere with the regular running of the trains, as soon as the blockade is removed it not unfrequently happens that as many as twenty-five bushels will come in of a single morning, counting possibly as many as ten thousand papers in one mail delivery.

What becomes of all the papers? What do you do with them? are questions which are often asked. The papers coming from every quarter are assorted throughout the day and night by the Post-office employees. Those addressed to Geo. P. Rowell & Co's

Advertising Agency are thrown into large mail bags, arranged on a rack or frame made to support them, with the mouth held open, and these, when filled, are tied at the top and set aside to wait until called for. The bags are brought to the office, after

which the papers are taken out, and heaped upon a table. Then the wrappers are taken off and the papers smoothed out, uniformly folded and arranged

by States, after which the various piles are handed over to the men who have in charge the business of examining each separate paper to make sure that

If a paper fails to come to hand, the checking book reveals the fact, and it is sent for. It may not be of much importance, but the clerk in charge is instructed not to consider that, but to **GET THE PAPER and keep files complete.**

If an advertisement is materially wrong, is out of position, has important typographical errors, or for any reason is not what the advertiser is entitled to expect, notice is dispatched to the publisher at once, and the error is made good by another insertion or a reduction from the bill.

This system is carried to great perfection.

The checking books are kept permanently for inspection by advertisers. The papers themselves are kept three months from date of issue, after that time the Agency does not guarantee to exhibit them.

These being placed in tiers or cases placed back to back and set up to form galleries, so as to permit of the whole being arranged alphabetically by States, the name of each State being designated on the cases and again over the entrance to each separate gallery.

A stranger is thus enabled to search out the depository for his own local paper, or any other that he may desire to see, with as much readiness as he finds a word in a dictionary or a name in a directory.

advertisement which is not there. This work has all been done beforehand, and each advertisement marked plainly with a black crayon. If it is so marked the

After the examination and marking, the paper is again folded, and receives a heavy mark on its upper right hand corner to indicate that it has passed through the requisite examination, and is ready to be placed upon file. It is then taken and placed in the space accorded to it. Every weekly paper is assigned a pigeon-hole, 8 inches by 10 1/2, and one foot deep, while to a daily is accorded three such. These spaces are all designated by a label, having printed upon it the name of the paper to which the space is accorded.

These galleries being arranged one story above another and as compactly as possible, occupying portions of the same rooms where all the work upon the papers is performed, leave nothing to be desired in the way of convenience.

An advertiser whose rule it is to pay no bills until he sees *all the papers* can here be accommodated, and a business amounting to \$20,000 per annum in cheap country papers can be looked after (every copy of every paper examined) by the advertiser, or his representative, who will devote three days' time to the examination four times a year.

The time required for examining papers is mainly used in looking after the

examiner takes in its appearance, style, position, everything in an instant, and if it is *not* marked he need go no farther; it is not there, and he is entitled to one other insertion or an allowance.

An important use of having complete files of papers so conveniently arranged consists in being able to produce for large advertisers samples of all the papers in which they wish to insert their announcements, that they may see for themselves what each paper looks like, and judge what style of advertising will be most effective in each.

When the papers have accumulated

they may be found in the store of the paper dealer, made into new bundles, upon which may again be printed other papers to repeat the same round of experiences.

As a display of sample copies of eight thousand newspapers, the Centennial Exhibition in the Newspaper Pavilion at Fairmount Park, Philadelphia, attracts well-merited attention. It is substantially a reproduction of Geo. P. Rowell & Co's Advertising Agency in the city of New York, except that as the latter has been established many years, and conducted upon a carefully-arranged system, it is more complete in its arrangements than would be possible to make such an exhibition elsewhere in a few weeks or months.

CHARLESTON, SOUTH CAROLINA AND AMERICAN GENERAL GAZETTE; Fridays; politics Tory; four pages; size of page 10x16½; publishers, R. Wells & Son.

# Centennial Newspaper Exhibition.

## HISTORICAL SOCIETIES AND PUBLIC LIBRARIES.

At the final closing of the Exhibition, in November, it will be comparatively easy to make up sets of same copies, to be distributed among prominent Historical Societies and Public Libraries. A single copy of every American newspaper will make a package weighing nearly half a ton, and the collection by correspondence with the offices would involve interminable delays and many hundred dollars of expense. The postage stamps for an application would cost two hundred and forty dollars.

MESSRS. GEO. P. ROWELL & Co. have supplied such sets in two or three instances, and not long since were applied to for one for the Library of the Vatican at Rome.

*The Minnesota Historical Society,  
St. Paul, Feb. 17, 1876.*

GEO. P. ROWELL:

MY DEAR SIR—Your proposed collection of American journals is a measure that I feel highly gratified you have undertaken, as no one else (in my opinion) could do it so well and completely as you will. Having been a journalist myself, and being at present one of the Centennial Commissioners from this State, I had resolved to attempt a complete collection of our Minnesota newspapers for the Exposition; but, as you have undertaken it, I shall gladly give it into your hands.

It will be a department of the great Exhibition far more valuable and instructive than will appear at first glance. Journalism plays so important a part now in our national life and progress, that to omit it from our American Exhibition would be a defect that would be noticeable. European visitors must be wonderfully struck with the display you design making. Indeed, but few of our own people, perhaps, fully and completely recognize what an estate American newspaperdom has become! It will astonish even ourselves.

Such collections as you will make have a permanent value. This society is in possession of nearly 600 bound volumes of Minnesota newspapers, being quite complete from the first issue of a paper in Minnesota in 1849. We have also sets of New England and other papers reaching from 1665, almost unbroken, down to the present time. We now receive, and carefully preserve for binding, nearly one hundred papers. For historical reference their value is incalculable. \* \* \*

Yours truly,

J. FLETCHER WILLIAMS, Sec'y.

*Long Island Historical Society,  
Brooklyn, N. Y., Feb. 26, 1876.*

MR. GEO. P. ROWELL:

DEAR SIR—There can be no doubt, among persons competent to judge, of the usefulness of such an exhibition of American newspapers as that which you propose to make at Philadelphia. We should be very glad, indeed, to have the collection of specimen copies when you shall be making a final disposition of your files, and would carefully preserve them. I hope you will meet with every possible encouragement in your enterprise, for a complete or nearly complete display would not only be exceedingly curious and interesting, but would be very valuable for historical reference, beside being an exhaustless source of information about newspapers in this country. \* \* \* I will most cheerfully render any aid in my power.

Very sincerely yours,

GEORGE HANNAH, Sec'y.

*Yale College, New Haven, Conn.,  
March 2, 1876.*

The project of collecting and exhibiting at the Centennial Exposition specimen copies of the newspapers and periodicals published in the United States meets my cordial approval.

N. PORTER, President Yale College.

*Maine Historical Society,  
Brunswick, Feb. 21, 1876.*

GEO. P. ROWELL, Esq.:

DEAR SIR—\* \* \* Not a word need be said regarding the value of the public press. No investigation of a historical subject can be successful without its aid—all historical society libraries—nay, all public libraries, are glad to secure a file of any village paper even. The value and influence of the newspaper press is so marked in this country, that it is very desirable that pains should be taken to secure full exhibition of it at the Centennial. We should be glad of a collection of specimen copies.

Respectfully, etc.,

A. S. PACKARD, Sec'y.

*The Vermont Historical Society,  
Montpelier, Feb. 16, 1876.*

GEO. P. ROWELL, Esq.:

DEAR SIR—\* \* \* I most heartily approve of the enterprise, for in this department certainly we can excel the world, and I hope that it may be made as conspicuous as possible.

The Vermont Historical Society most earnestly desires a complete set of specimens.

Very respectfully your ob't serv't,

M. D. GILMAN, Librarian.

*The Historical Society of Pennsylvania,  
Philadelphia, Feb. 23, 1876.*

DEAR SIR—Your recent circular has been received at this Society, and the general purpose expressed in it, as far as they understand it, is approved by such of our members as have read the circular. \* \* \* I have the honor to be, with great respect,

Your very ob't serv't,

JOHN WM WALLACE, Pres

*Concord, N. H., Feb. 23, 1876.*

GEO. P. ROWELL, Esq.:

DEAR SIR—\* \* \* The plan proposed by you for the collection of newspapers is certainly a good one. \* \* \* The New Hampshire Historical Society would be glad to have a complete set of specimens for preservation in the library.

Truly yours,

SAMUEL C. EASTMAN.

Librarian N. H. Hist. Soc.

# AMERICAN Newspaper Reporter AND PRINTERS' GAZETTE.

PUBLISHED WEEKLY.

- Has a considerable subscription list among printers. Goes weekly to more than 6,000 newspaper offices. Receives a magnificent advertising patronage from dealers in printing materials.
- Contains weekly reports of the establishment of new newspapers (now averaging six daily, or thirty-six every week). Suspensions, consolidations, enlargements, and improvements.
- Is relied upon by advertising agencies and all others whose business interests require them to keep informed upon newspaper changes.
- Advertisers who wish to make proposals to publishers—offering some book or other article in exchange for advertising—do well to make a trial of its advertising columns.
- Those wishing to embark in journalism, either by the purchase of an established paper, or the selection of a location, will come in direct communication, through the REPORTER, with retiring publishers or communities eager to have a home paper in their midst.
- Publishers retiring from active business find no medium equal to the REPORTER in assisting them to find a purchaser for their offices and printing material.
- Every printer looks to it for advertisements of "Bargains," and not a copy is sent out that does not contain something choice in that line.
- Through its columns manufacturers of new machinery for printers can have a full descriptive article placed in every newspaper office in the country at a reasonable price.
- Offers an opportunity to the general advertiser who wishes to barter goods for advertising space. He can make his proposal to publishers through its columns.

## ADVERTISING RATES :

TWENTY-FIVE CENTS a line, each insertion.

ONE-FOURTH PAGE is counted as fifty-three lines, and costs \$13.25 each insertion.

ONE-HALF PAGE is counted as one hundred lines, and costs \$25 each insertion.

ONE PAGE is counted as two hundred lines, and costs \$50 each insertion.

FOUR CONSECUTIVE PAGES inserted once for \$10 .

EIGHT CONSECUTIVE PAGES inserted once, \$150.

SIXTEEN CONSECUTIVE PAGES inserted once, \$250.

## INSERTS.

Inserts of a single leaf, furnished by the advertiser and printed in accordance with requirements made known on application, will be taken for \$50 ; two leaves (four pages) \$75 ; any number of pages more than four, \$100.

SUBSCRIPTION PRICE: \$2.00 PER YEAR, IN ADVANCE.

PUBLISHED BY

*(Newspaper Pavilion, Centennial Grounds, Philadelphia.)*

PRINCIPAL OFFICE: 41 PARK ROW, NEW YORK.

# AMERICAN Newspaper Directory,

EDITION FOR 1876,

CONTAINS:

A complete list of Newspapers and other Periodicals in the United States, Territories, and Dominion of Canada, arranged alphabetically by towns, giving name, days of issue, politics or general character, form, size, subscription price per year, date of establishment, editors' and publishers' names, and circulation.

ALSO THE FOLLOWING CLASSIFIED LISTS:

Periodicals publishing over 5,000 copies each issue; Religious Newspapers and Periodicals; Newspapers and Periodicals devoted to Agriculture, Horticulture, and Stock Raising; Medicine and Surgery; Educational Institutions or devoted to Educational Matters; Amusement and Instruction of children; Freemasonry, Oddfellowship, Temperance, and Knights of Pythias; Commerce and Finance, Insurance, Real Estate, Science and Mechanics, Law, Printers and Publishers, Sporting, Music, Fashions, and Woman's Suffrage; also, Newspapers and Periodicals printed wholly or in part in the German, French, Scandinavian, Spanish, Hollandish, Italian, Welsh, Bohemian, Portuguese, Polish and Hebrew languages.

---

The object of the AMERICAN NEWSPAPER DIRECTORY is not very different from that of the well-known mercantile agencies which exist in all our leading cities. The latter keep their subscribers informed of the character, habits, reputation, business ability, and financial strength of persons with whom they are likely to have business transactions, enabling them thereby to so regulate those transactions as to secure probably profitable dealings, or to avoid such as will be likely to result in ultimate annoyance or loss.

The DIRECTORY conveys the best obtainable information concerning the character and value of newspapers. Its patrons are the men who expend money in advertising (a large and important class), and it is from them that the publishers of the DIRECTORY, in their capacity of Advertising Agents, derive their profit and support.

As the most important portion of the information supplied by a mercantile agency consists of a report of the financial strength of the person about whom information is asked, so is the circulation of a newspaper generally considered the point upon which information will be of most value to the advertiser.

The greatest possible care is taken to make the DIRECTORY reports correct. Every publisher is applied to very systematically. All information is taken in a form which excludes any but definite statements which cannot be misunderstood; while every effort is made to protect honest publishers against such as would resort to lying or perjured reports to gain an unfair advantage.

---

ONE THOUSAND PAGES.      PRICE, FIVE DOLLARS

PUBLISHED BY

*GEO. P. ROWELL & CO., ADVERTISING AGENTS,*

*(Newspaper Pavilion, Centennial Grounds, Philadelphia.)*

PRINCIPAL OFFICE: 41 PARK ROW, NEW YORK.

# ROWELL & CHESMAN,

*Cor. 3d & Chestnut Sts., St. Louis, Mo.,*

*Give special attention to the insertion of Notices in the Local and Advertising Columns of the Papers in the Mississippi Valley and South-West, and act as agents for the Leading Papers in all parts of the United States and Canadas.*

---

It is a most natural result, in a country of such magnificent distances as ours, that the leading inland metropolis should have a Newspaper Advertising Agency that enjoys the confidence both of publishers and advertisers. To establish such an one, the only requisites were to associate men of established financial responsibility and thorough knowledge of the business. Such a combination at once commands the respect of advertisers and secures for them, through the agency, the publishers' most favorable terms. Taking this view of the matter (which is a most natural one), it is not surprising that the Agency of ROWELL & CHESMAN has secured a liberal patronage from the best advertisers at home and in other parts of the country, and built up a prosperous business when advertising generally has been depressed.

Located at the trade center of the country it seeks specially to represent, this agency has the benefit of quick communication with publishers, which enables it to secure prompt insertion to orders, and to correct any errors that may occur, much sooner than would be possible for an agency at a distance.

It is the earnest effort of this agency to serve its patrons in a prompt and intelligent manner, and all who seek patronage through newspaper advertising are invited to give it a trial.
